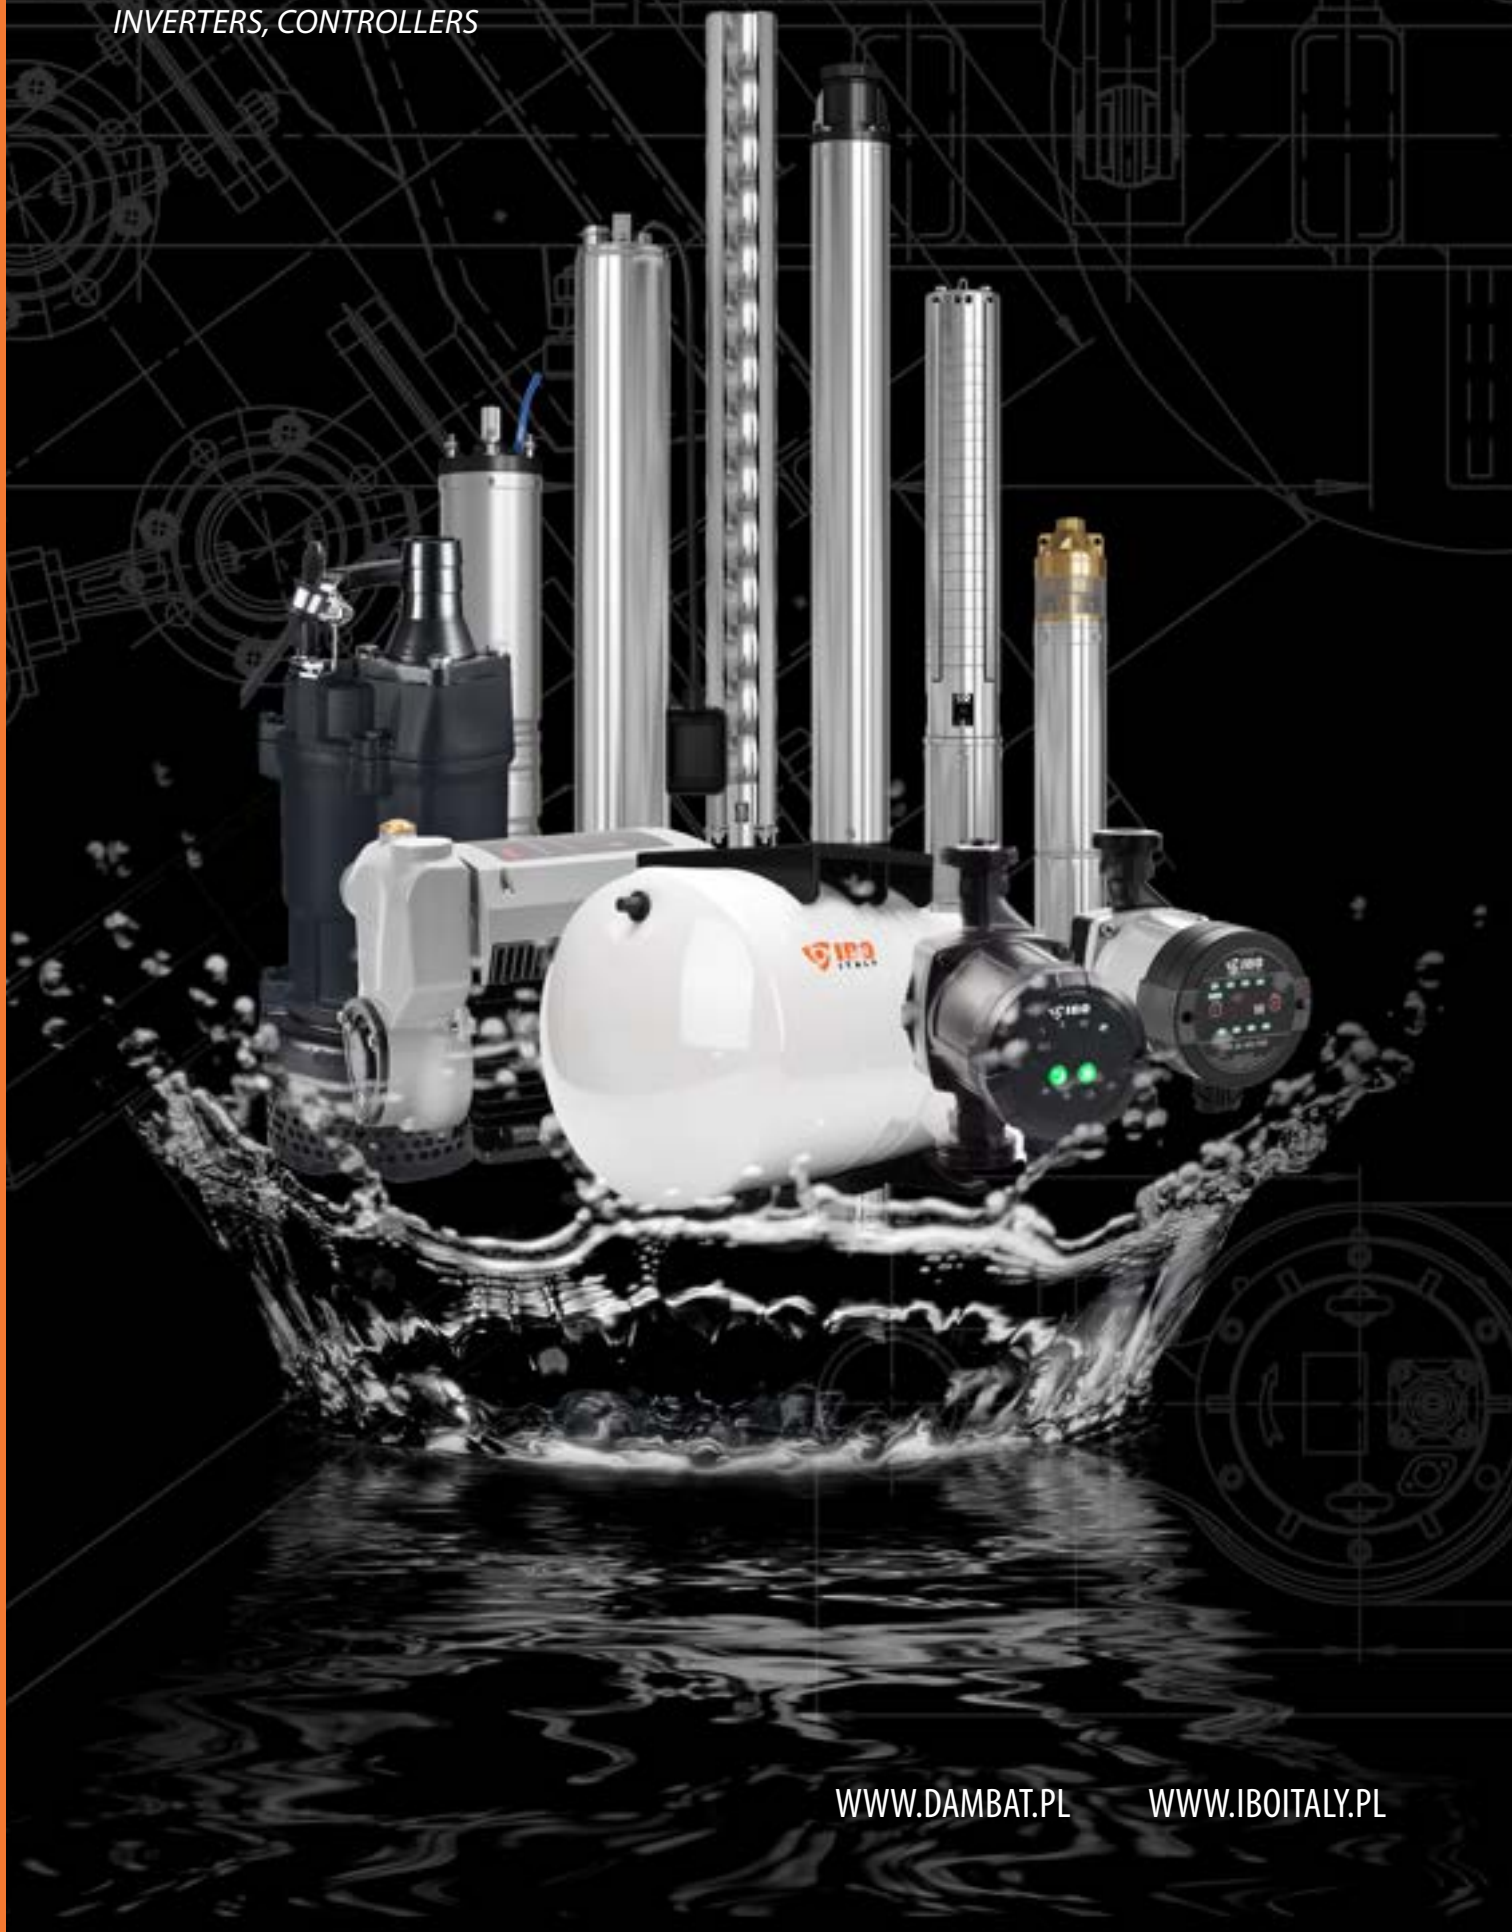
PRODUCT CATALOGUE

PUMPS, MOTORS, BOOSTER SETS, INVERTERS, CONTROLLERS



WWW.DAMBAT.PL WWW.IBOITALY.PL

DAMBAT IS A DYNAMICALLY DEVELOPING POLISH MANUFACTURER OF WATER PUMPS AND FITTINGS SOLD UNDER IBO BRAND.

The company started its activities in 1999 and from the very beginning it based its development on understanding clients' needs providing them with high quality products. With experience and knowledge of qualified personnel and regular product development, Dambat became a significant manufacturer of water pumps in the European market.

In order to continue constant development, we cooperate with world-renowned manufacturers of water devices and equipment, while making our offer more attractive. In 2015 and 2016 we commenced cooperation with Italian factories, which resulted in introduction of a new IBO Italy brand into the market.

In cooperation with our Italian partners, we sell top quality tanks, pumps and deep well motors under this brand. Benefiting from the latest technology and high-quality materials, IBO and IBO ITALY products ensure long-lasting, safe and faultless operation. The range of products with such features and individual approach enabled us to acquire distributors of our devices in the majority of European countries and beyond.

With the experience gained over the years in line with knowledge and understanding of the importance of reliability, Dambat delivers top quality products to all customers who decide to choose our offer.

AJ 50/60

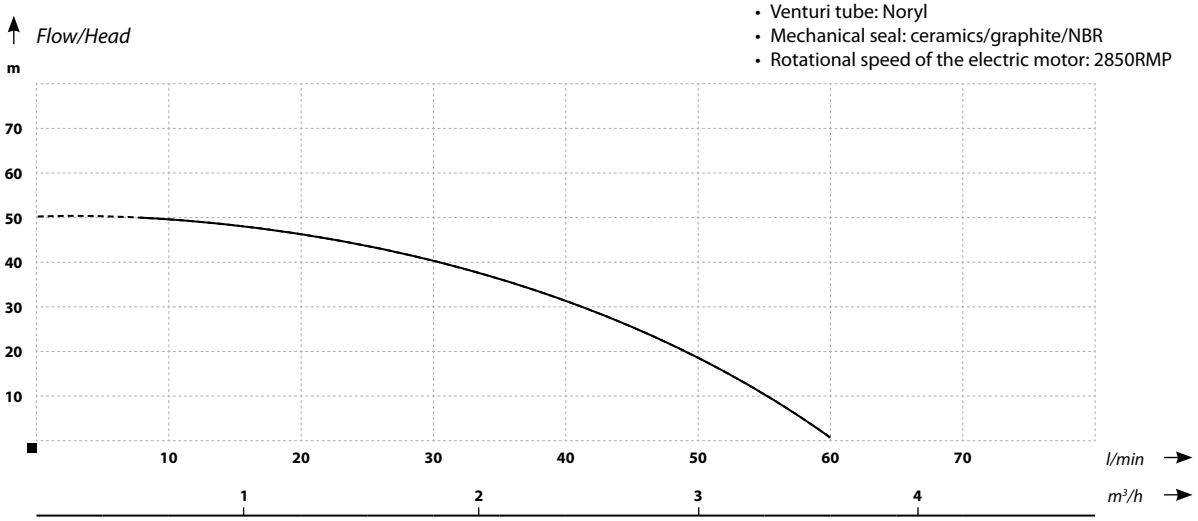
Single-stage self-priming centrifugal surface pump equipped with the Venturi tube system for increased suction capacity, designed for pumping of clean cold water from own intakes and for increasing pressure. Sections of pump body and shaft that come in contact with water are made of stainless steel (INOX design). The pump has a power cable with a plug. The pump motor is provided with thermal protection.

APPLICATION:
Supply of water to houses, holiday houses, allotments and gardens.
When combined with pressure tanks, the pumps can be used in single- and multi-family residential housing, in industrial applications and for irrigation purposes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP44

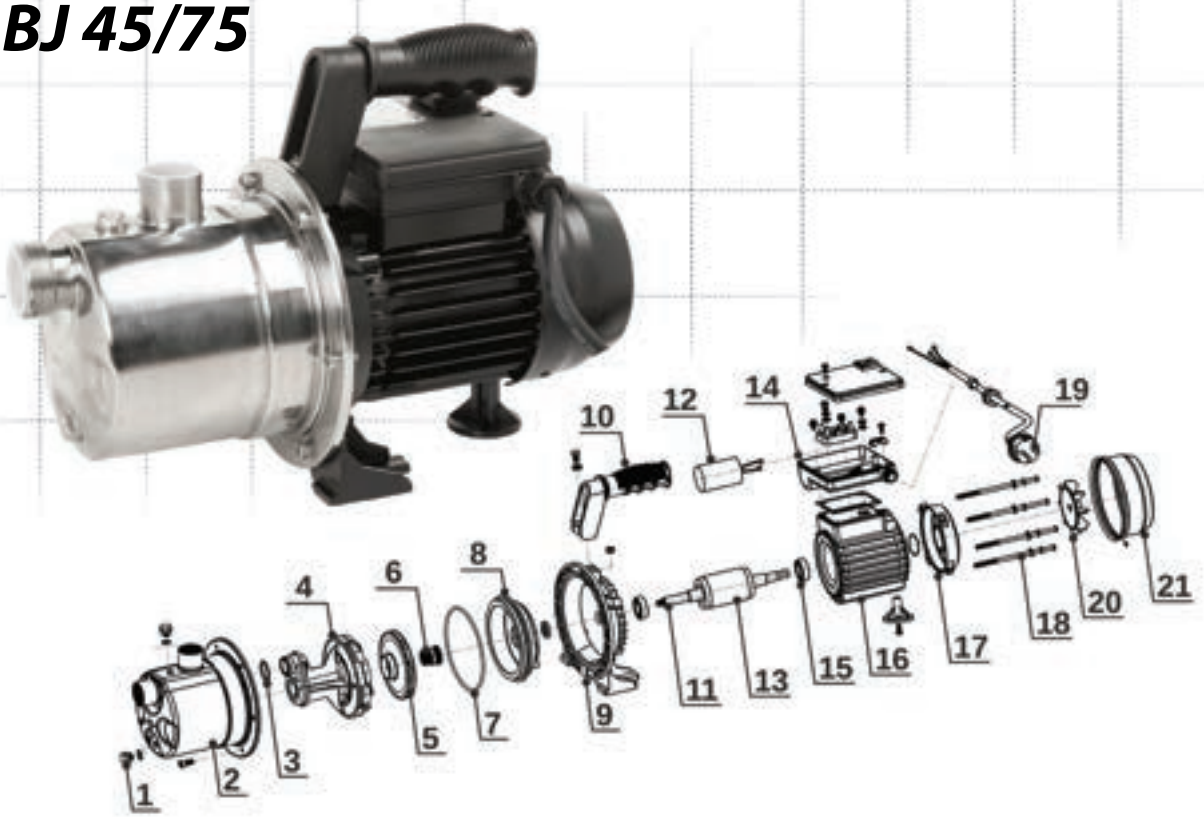
MATERIALS:
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl (stainless steel AISI 304)
- Frame: cast iron
- Pump end plate: stainless steel AISI 304
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
AJ 50/60	50	60	1100	230	8	3,2	1 x 1	37/21/20	10,5

BJ 45/75

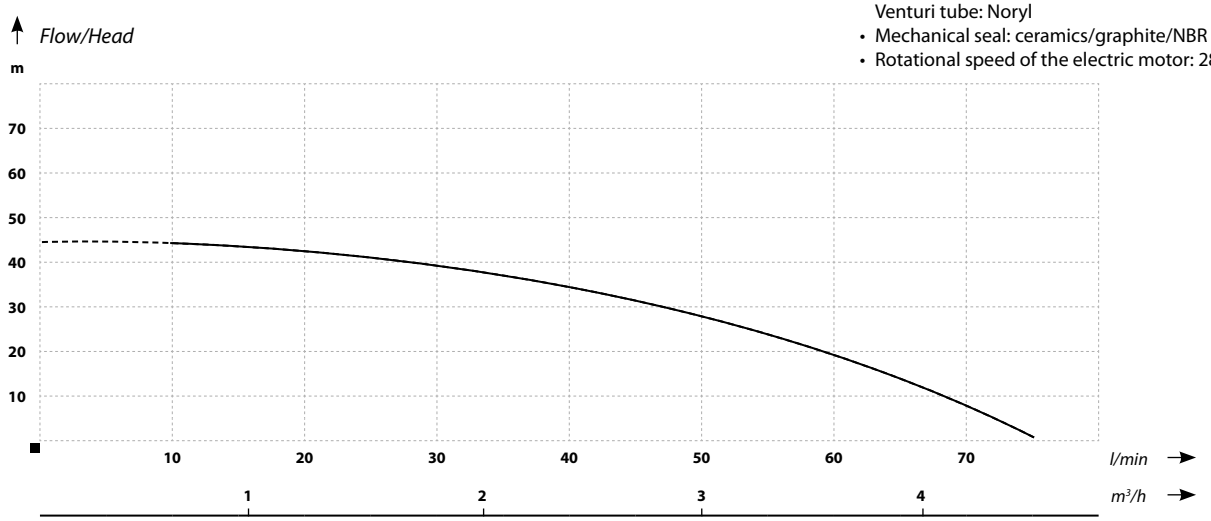


The pump for pumping of clean cold water from own intakes and for increasing pressure. BJ 45/75 is a single-stage self-priming centrifugal surface pump equipped with the Venturi tube system for increased suction capacity. Sections of pump body
and shaft coming in contact with water are made of stainless steel (INOX design). The pump is manufactured to the highest quality standards in terms of the design and materials used. The pump has a power cable with a plug, and the pump motor is provided with thermal protection.

APPLICATION:
Supply of water to houses, holiday houses, allotments and gardens. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing and in industrial applications.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP44

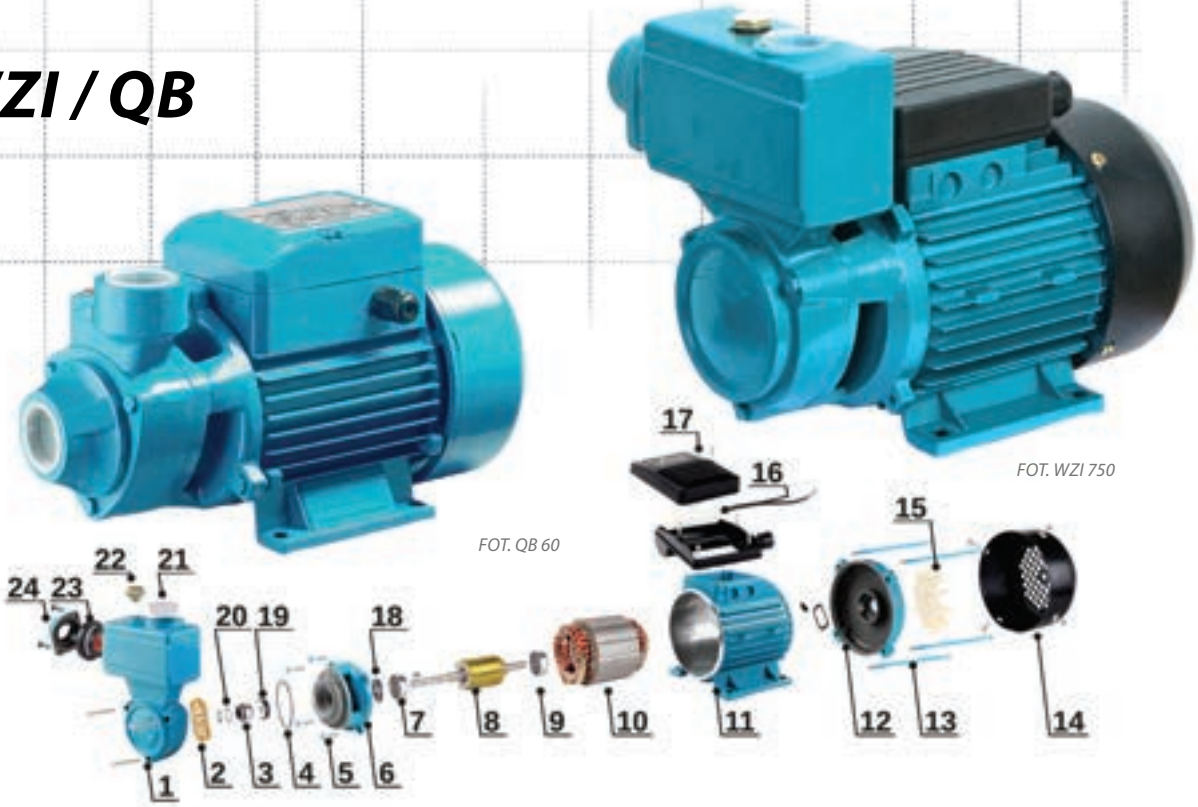
MATERIALS:
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Pump end plate / Frame:
- stainless steel AISI 304/cast iron/aluminium Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
BJ 45/75	45	75	1100	230	8	3,9	1¼ x 1	36/25/18	8,5

WZI / QB

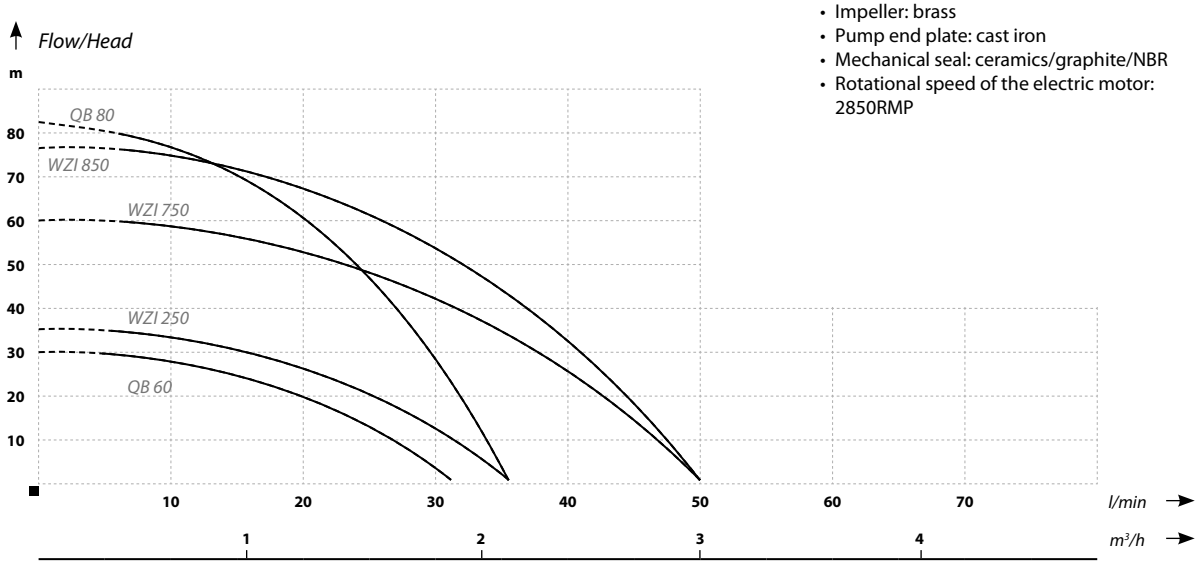


Single-stage self-priming peripheral surface pumps for pumping of clean cold water from own intakes and for increasing pressure. Pump impellers are made of brass. The pump body is made of durable cast iron with the built-in non-return valve. The pump motor is provided with thermal protection. The pumps have a power cable with a plug.

APPLICATION:
Supply of water to holiday houses, allotments and gardens. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing, in industrial applications and for irrigation purposes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:
- Housing: cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: brass
- Pump end plate: cast iron
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)

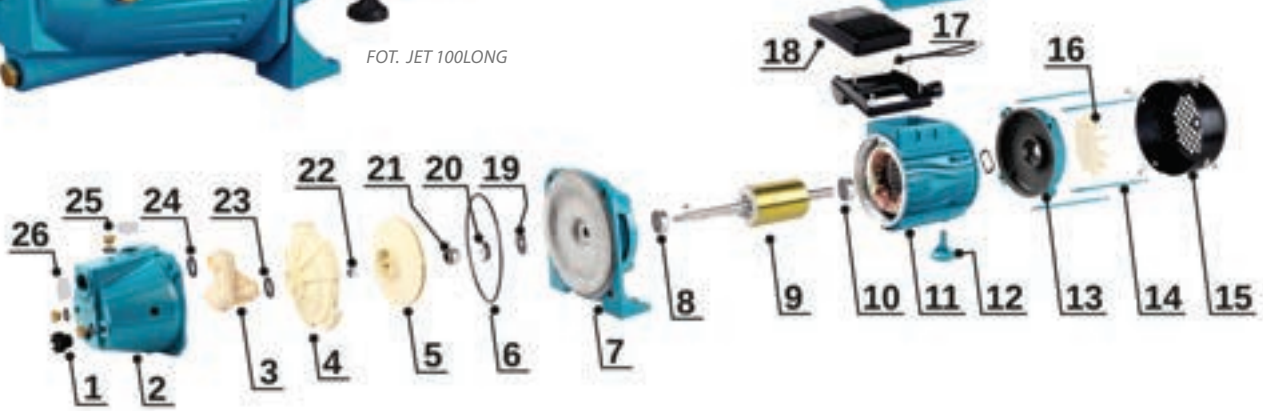
JET 100A / JET 100L

FOT. JET 100LONG

FOT. JET 100A



Single-stage self-priming centrifugal surface pump equipped with the Venturi tube system for increased suction capacity, designed for pumping of clean cold water from own intakes and for increasing pressure. The pump body is made of durable cast iron, and the pump motor is provided with thermal protection. The pump has a power cable with a plug. The pump is available with accessories or in the booster set.

APPLICATION:

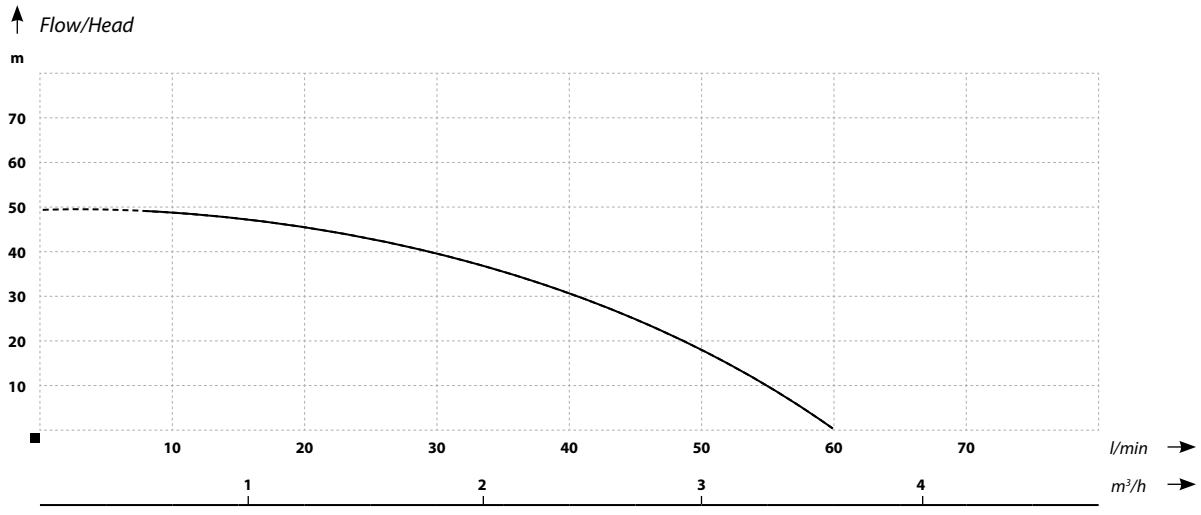
- Supply of water to houses, holiday houses, allotments and gardens. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing, in industrial applications and for irrigation purposes.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:

- Housing: cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Pump end plate / Frame: cast iron
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP



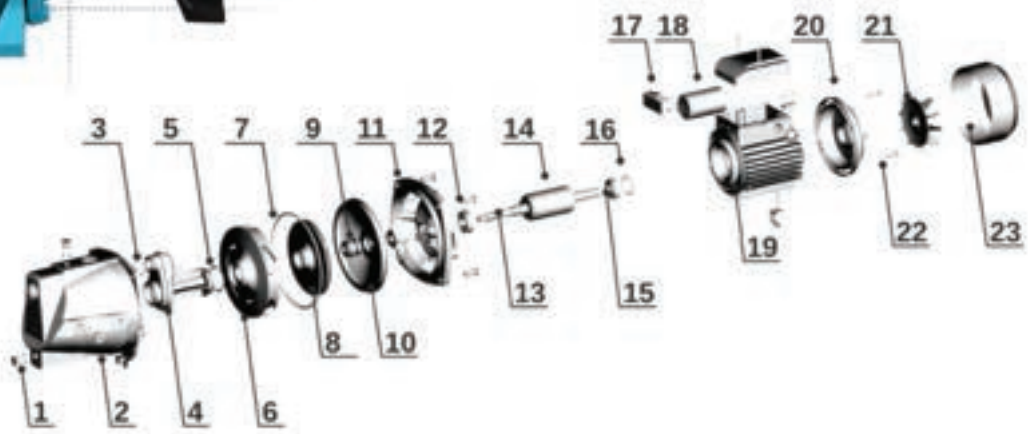
PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
JET 100A	50	60	1100	230	8	3,2	1x1	39/20/18	11,5
JET 100A LONG	50	60	1100	230	8	3,6	1x1	44/21/18	12,5

JSW

JSW 100

JSW 150



Single-stage self-priming centrifugal pumps equipped with the Venturi tube system for increased suction capacity, designed for pumping of clean cold water from own intakes and for increasing pressure. The JSW pumps are very efficient and additionally provide exceptionally good water suction capacity. JSW 200 pumps have a brass impeller. All JSW pumps are equipped with thermal protection mounted in the motor winding.

APPLICATION:

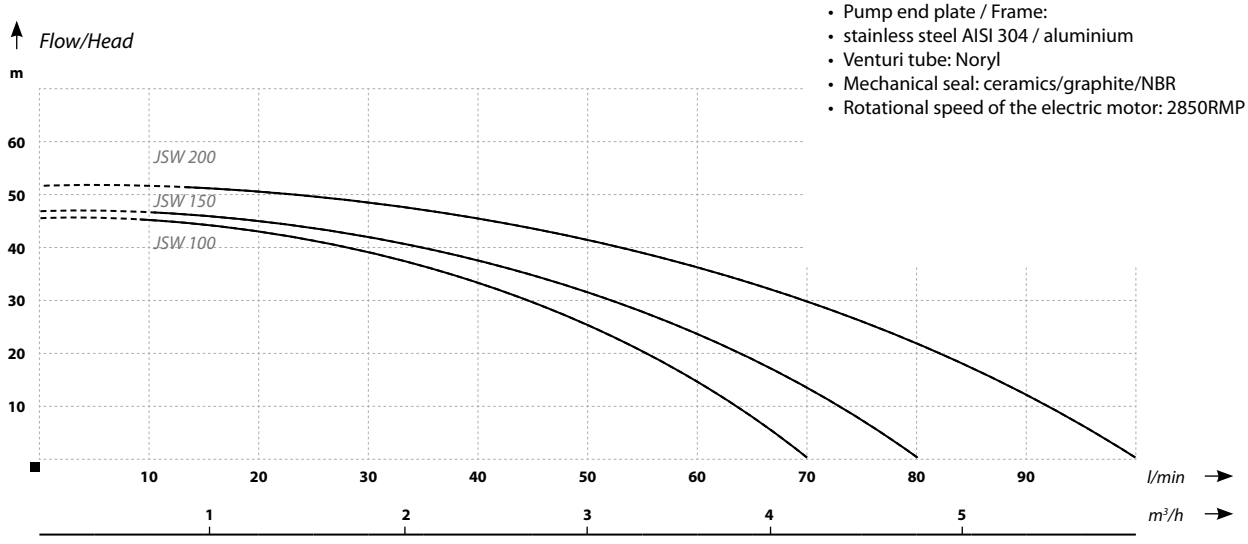
- Supply of water to houses and agricultural holdings, as well as for irrigation of gardens. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing, in industrial applications and for irrigation purposes.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:

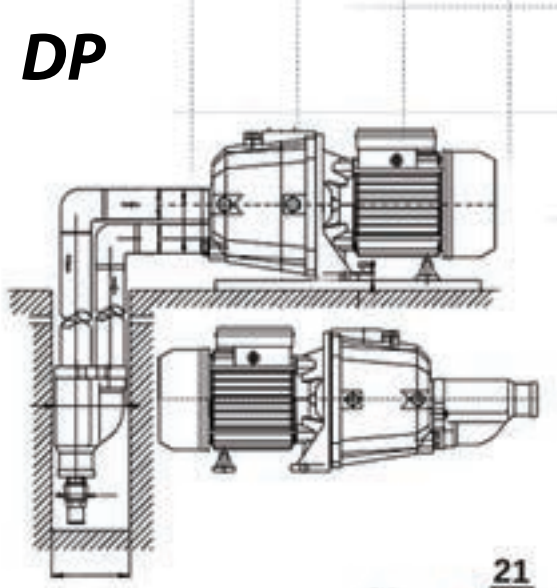
- Housing: cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl / brass
- Pump end plate / Frame:
- stainless steel AISI 304 / aluminium
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP



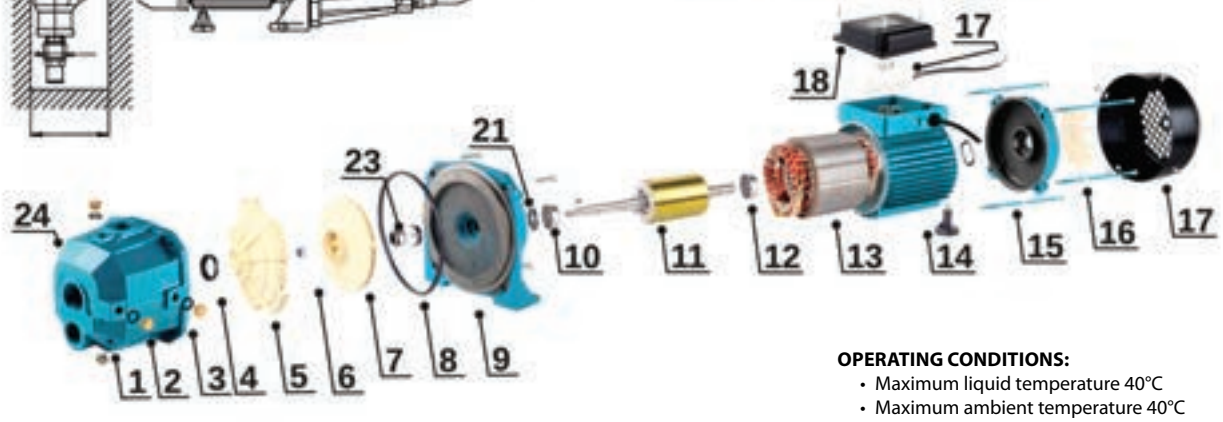
PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
JSW 100	45	70	1100	230	8	3,2	1x1	39/21/19	11
JSW 150	46	80	1500	230	8	5,6	1x1	41/21/19	11,5
JSW 200	53	100	1800	230	8	8,2	1x1¼	52/25/22	17

DP



FOT. DP370



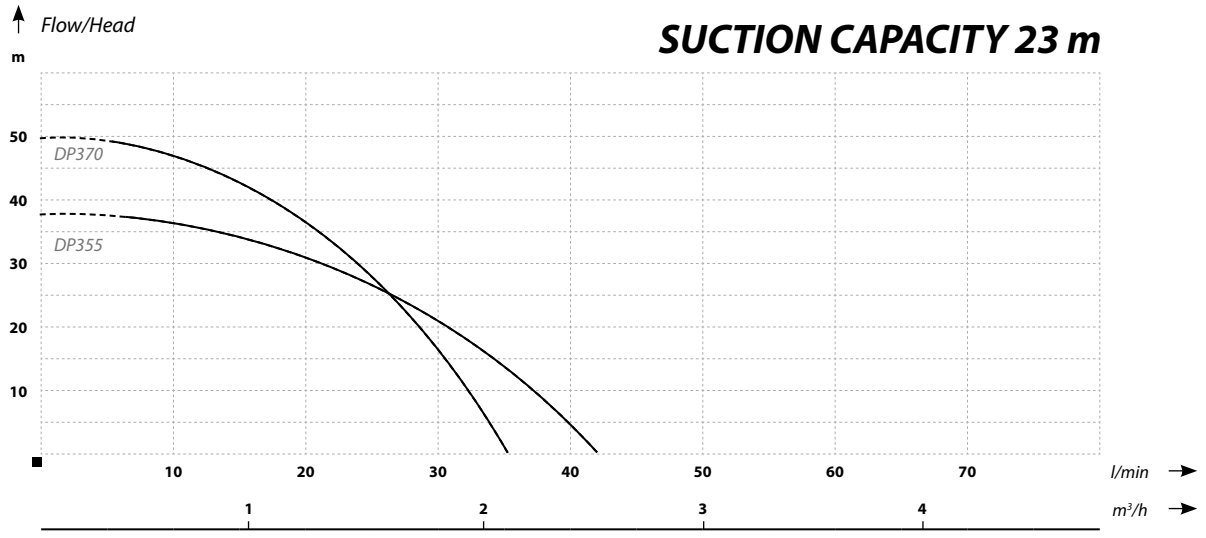
The pump for pumping of clean cold water from own intakes and for increasing pressure. DP355 is a single-stage self-priming centrifugal surface pump equipped with the Venturi tube system immersed directly into a well for increased suction capacity. DP355 is one of the few pumps that has a suction capacity of 23 m when using the Venturi tube system immersed into the well. Due to the high suction capacity, the pump can replace a submersible pump. The pump body is made of durable cast iron, and the pump motor is provided with thermal protection. The pump has a power cable with a plug.

APPLICATION:
Supply of water to houses, holiday houses, allotments and gardens. When combined with pressure tanks, they can be used for single- and multi-family residential buildings, in industrial applications and for irrigation purposes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:
- Housing: cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Pump end plate / Frame: cast iron
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP

SUCTION CAPACITY 23 m



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)

DP370	50	35	1100	230	23	3,6	1 x 1	39/21/19	15

PJ 65/45 GARDEN

PJ 65-45

GARDEN

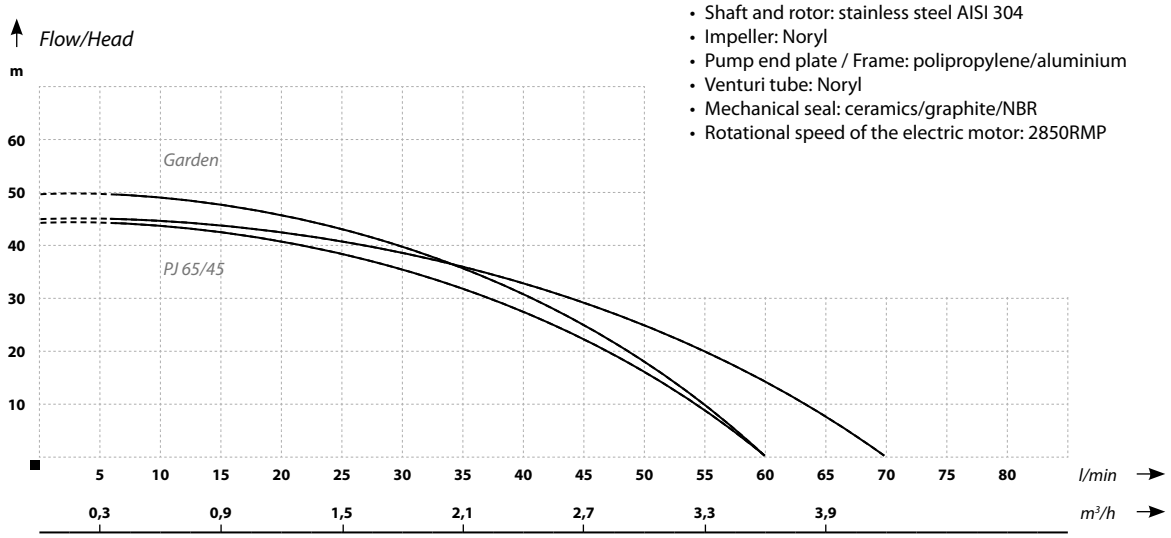
JSW 150 GARDEN

Self-priming centrifugal garden pumps equipped with the Venturi tube system for increased suction capacity. The pump body is made of a high quality material. Pumps are equipped with a switch integrated into the housing and a carrying handle. The pump motor is provided with thermal protection. The pump is available with fittings, booster sets and intelligent pump controllers.

APPLICATION:
Supply of water to houses, holiday houses, allotments and gardens, as well as for irrigation purposes. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing, agricultural holdings and in industrial applications.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Pump end plate / Frame: polipropylene/aluminium
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
PJ 65/45	45	60	1100	230	8	3,6	1x1	39/25/18	9,5

MULTI1300 INOX
MULTI-GARDEN

MULTI1300 INOX

FILTR

IMAGE: COMPLETE MULTI-GARDEN BOOSTER SET

Self-priming centrifugal pump with the built-in screen filter, equipped with the Venturi tube system for increased suction capacity.
The pump body is made of a high quality material and stainless steel. The pump is equipped with a switch integrated into the housing and a carrying handle. The pump motor is provided with thermal protection. The pump is available with fittings, booster sets and intelligent pump controllers.

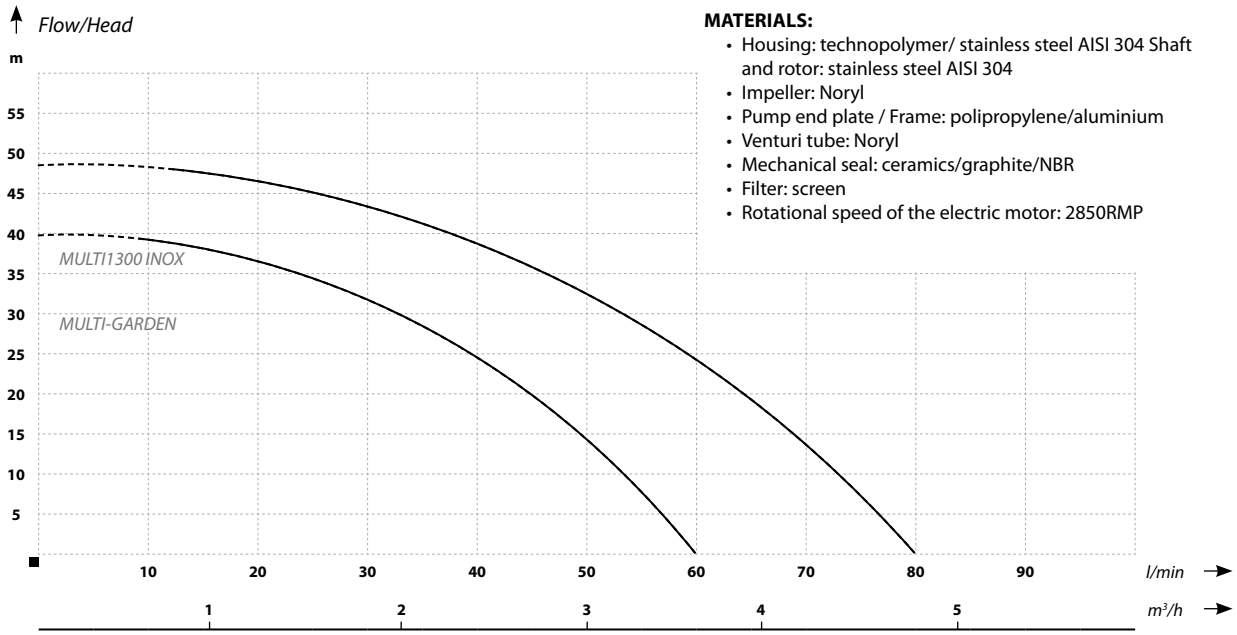
APPLICATION:
Supply of water to houses, holiday houses, allotments and gardens, as well as for irrigation purposes. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing, agricultural holdings and in industrial applications

OPERATING CONDITIONS

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:

- Housing: technopolymer/ stainless steel AISI 304 Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Pump end plate / Frame: polipropylene/aluminium
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Filter: screen
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)

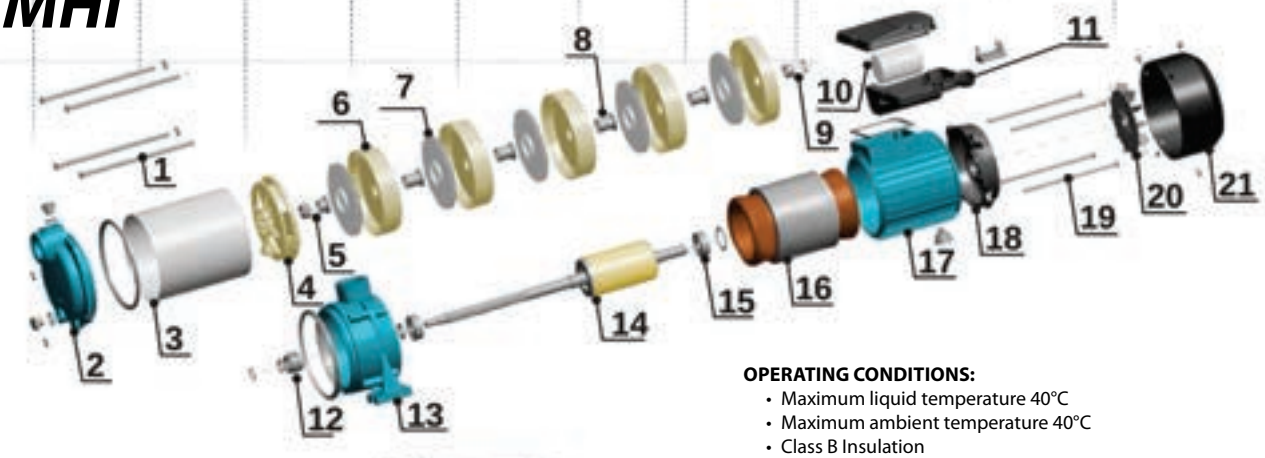
MULTI-GARDEN	40	60	1100	230	8	3	1 x 1	65/55/30	19

MHI



MHI 1800

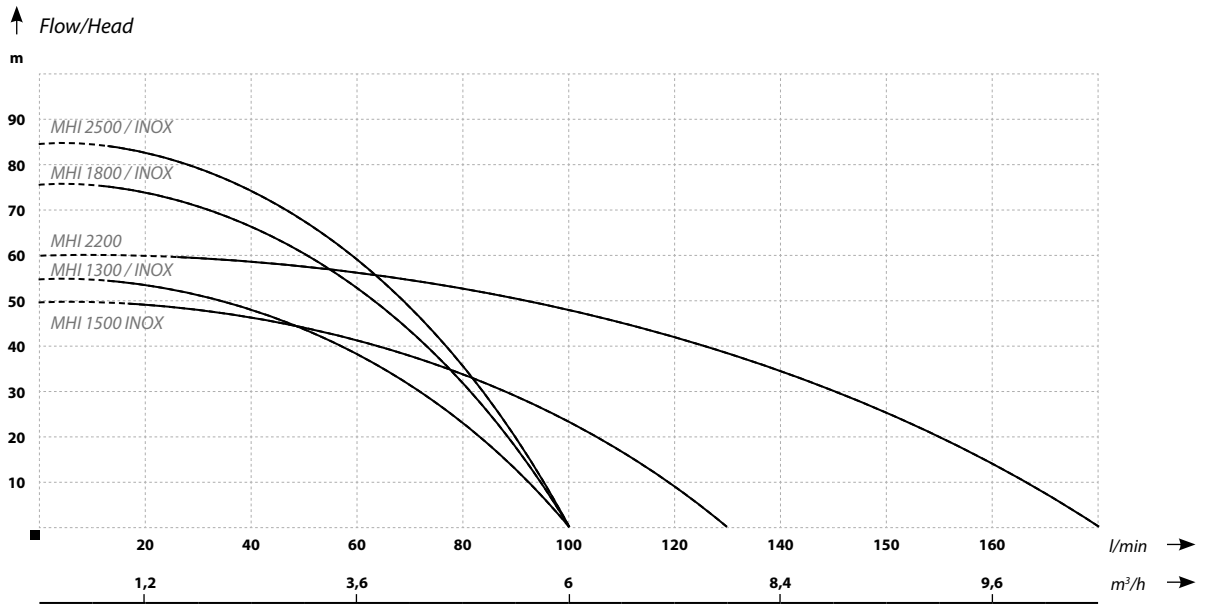
OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:

- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Impeller: AISI 304 (INOX design)
- Pump end plate / Frame: cast iron
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP

Group of multi-stage self-priming centrifugal pumps designed for pumping of clean cold water from own intakes and for increasing pressure. The pumps are equipped with the Venturi tube system for increased suction capacity. MHI pumps are available in two variants: with stainless steel impellers (INOX design) or with noryl impellers. All pumps have a stainless steel body. Due to low-noise operation, the pumps can be installed inside the houses. The pumps are equipped with thermal protection mounted in the motor winding.



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
MHI 1300 / INOX	55	100	1300	230	8	7	1x1	42/15/19	13,5

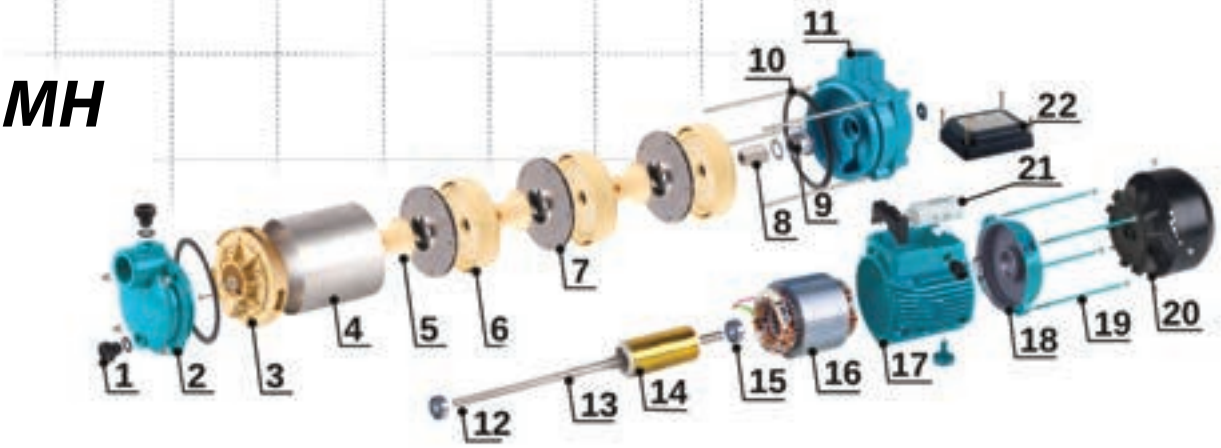
MHI 1800 / INOX	76	100	1800	230	8	8,8	1x1	48/18/20	17
MHI 2200	60	180	2200	230	8	10,5	1x1¼	46/18/21	18,5
MHI 2500 / INOX	85	100	2500	230	8	11	1x1	55/21/18	24

MH



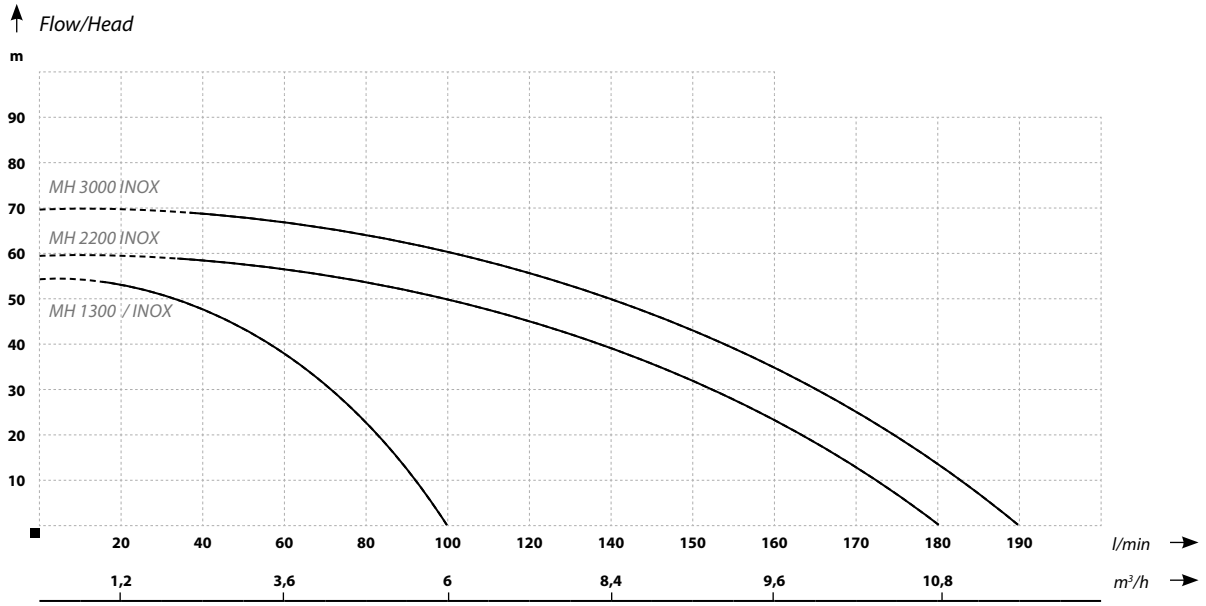
OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:

- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Impeller: AISI 304 (INOX design)
- Pump end plate / Frame: cast iron
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP

Group of multi-stage self-priming centrifugal pumps designed for pumping of clean cold water from own intakes and for increasing pressure. The pumps are equipped with the Venturi tube system for increased suction capacity. MH pumps are available in two variants: with stainless steel impellers (INOX design) or with noryl impellers. All pumps have a stainless steel body. Due to their high performance, efficiency and parameters, the pumps are often used to supply water to houses and agricultural holdings. Due to low-noise operation, the pumps can be installed inside the houses. The pumps are equipped with thermal protection mounted in the motor winding. All MH pumps are available in 230 V ~ / 50 Hz version. MH 1300 / INOX and MH 2200 INOX pumps are additionally available in the 400 V ~ 3/50 Hz version. MH pumps are also available with booster sets and with PC intelligent pump controllers (PC15, PC16, PC10P, PC59).



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
MH 1300 / INOX	55	100	1300	230/400	8	6	1x1	43/15/18	13,5

MH 3000 INOX	70	190	3000	230	8	12,5	1x1¼	47/19/22	26

CPM INOX

Single-stage non-self-priming centrifugal pumps designed for pumping non-aggressive liquids with non-abrasive and non-absorbent solids content of 0.27 kg/m^3. The maximum temperature of the pumped liquid is up to 60°C. The pump motor is provided with thermal protection mounted in the motor winding. Hydraulic parts that come in contact with water are made entirely of stainless steel.

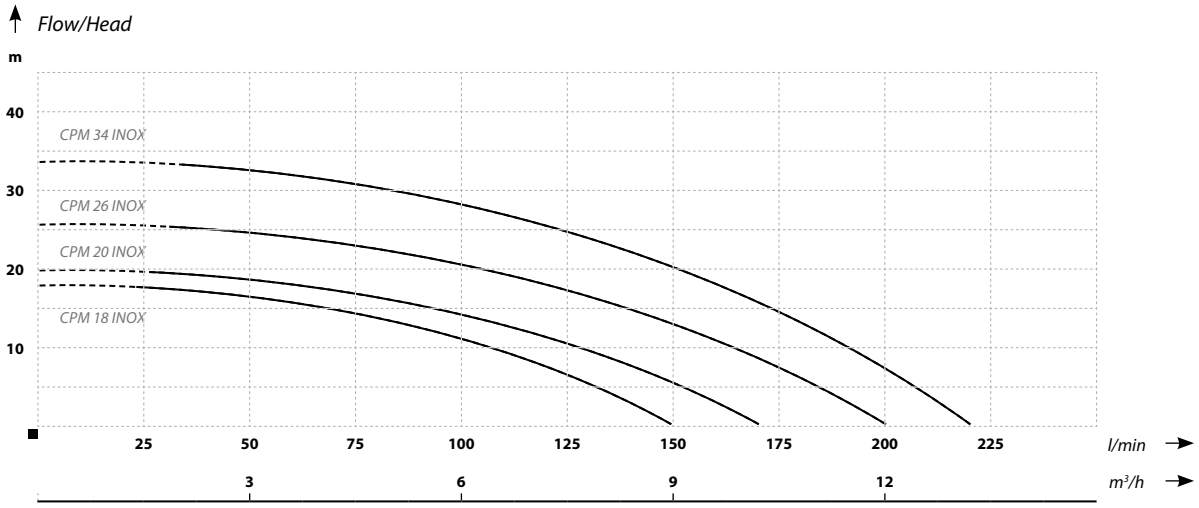
APPLICATION:
Agriculture: irrigation, drainage, water supply, pumping liquid fertilizers (not corrosive to AISI 304 steel). Industrial applications: supply of water, pumping liquids that are not corrosive to AISI 304 steel and non-explosive liquids, jest washing.
Air conditioning: heating, cooling. Household applications: supply of water, increasing pressure. The pumps is designed for continuous operation.

OPERATING CONDITIONS

- Maximum liquid temperature 60°C
- Maximum ambient temperature 50°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP44

MATERIALS:

- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Pump end plate: stainless steel AISI 304
- Frame: Aluminium
- Mechanical seal: carbon/ceramics/NBR
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)

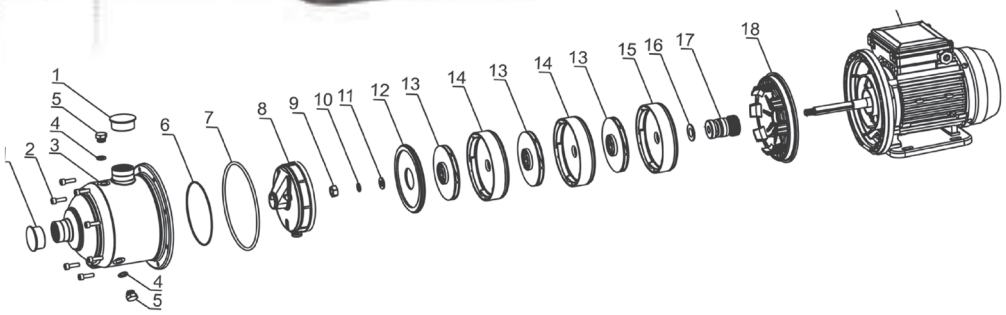
CPM 34 INOX	34	220	1500	230	7	7	1 x 1¼	36/25/24	16.4

HP INOX

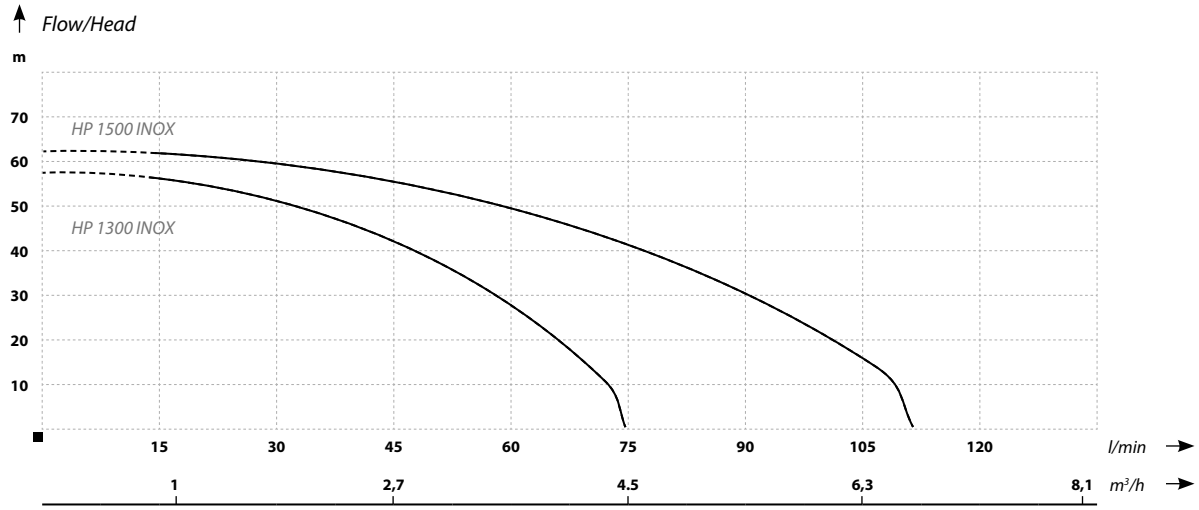


The pump for pumping of clean cold water from own intakes and for increasing pressure. HP Series are multi-stage self-priming centrifugal surface pumps equipped with the Venturi tube system for increased suction capacity. Sections of pump body and shaft that come in contact with water are made of stainless steel (INOX). The pump is manufactured to the highest quality standards in terms of the design and materials used. The pump has a power cable with a plug, and the pump motor is provided with thermal protection.

APPLICATION:
Supply of water to houses, gardens, industrial washing facilities, air conditioning and cooling systems. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing and in industrial applications.

OPERATING CONDITIONS:
- Maximum liquid temperature 70°C
- Maximum ambient temperature 50°C
- Class F Insulation
- Operating mode - continuous
- Protection - IP55

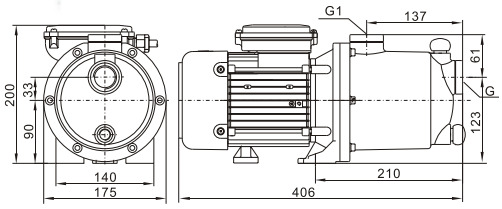
MATERIALS:
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Pump end plate: stainless steel AISI 304
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP

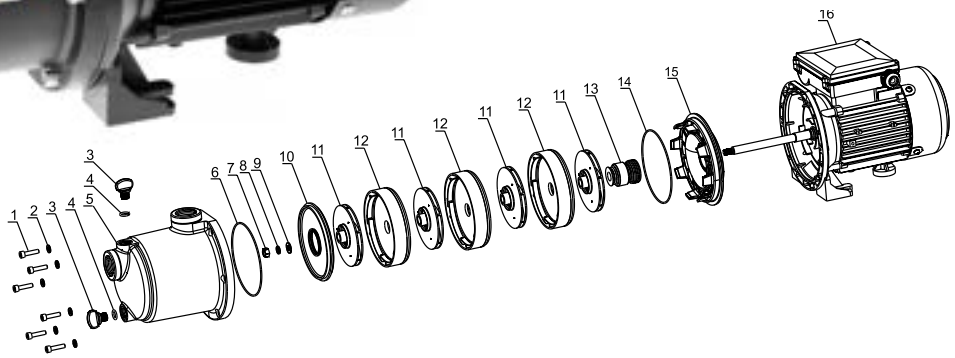


PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
HP 1300 INOX	58	75	1300	230	8	6,2	1x1	47/27/20	13,1
HP 1500 INOX	62	110	1500	230	8	9,6	1x1	48/20/23	15,5

E-HP 1300



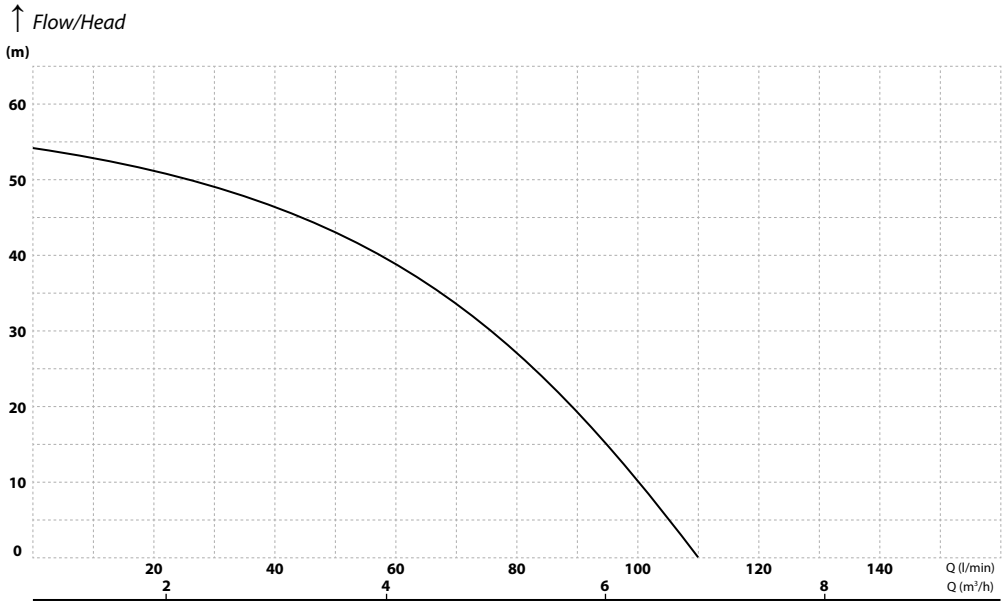


The pump used for clean, cold water from own intakes and for pressure boosting. The HP pumps are multistage, self-sucking surface pumps with increased suction capacity provided by a Venturi tube. The pump shaft is made of stainless steel (INOX). The pump is top quality in terms of workmanship and materials. It features a power cable with a plug, and the motor has integrated thermal protection.

APPLICATION:
Water supply to homes and gardens. In combination with membrane tanks can be used for single- and multi-family houses and in industry.

OPERATING CONDITIONS:
- Maximum liquid temperature 50°C
- Maximum ambient temperature 50°C
- Insulation class F
- Operation mode – continuous
- Degree of protection - IP55

MATERIALS:
- Housing: AISI 304
- Shaft and rotor: AISI 304
- Impeller: Noryl
- Diffuser: Noryl
- Partition: AISI 304
- Mechanical gland: ceramic/ graphite/NBR
- Motor speed: 2850RMP

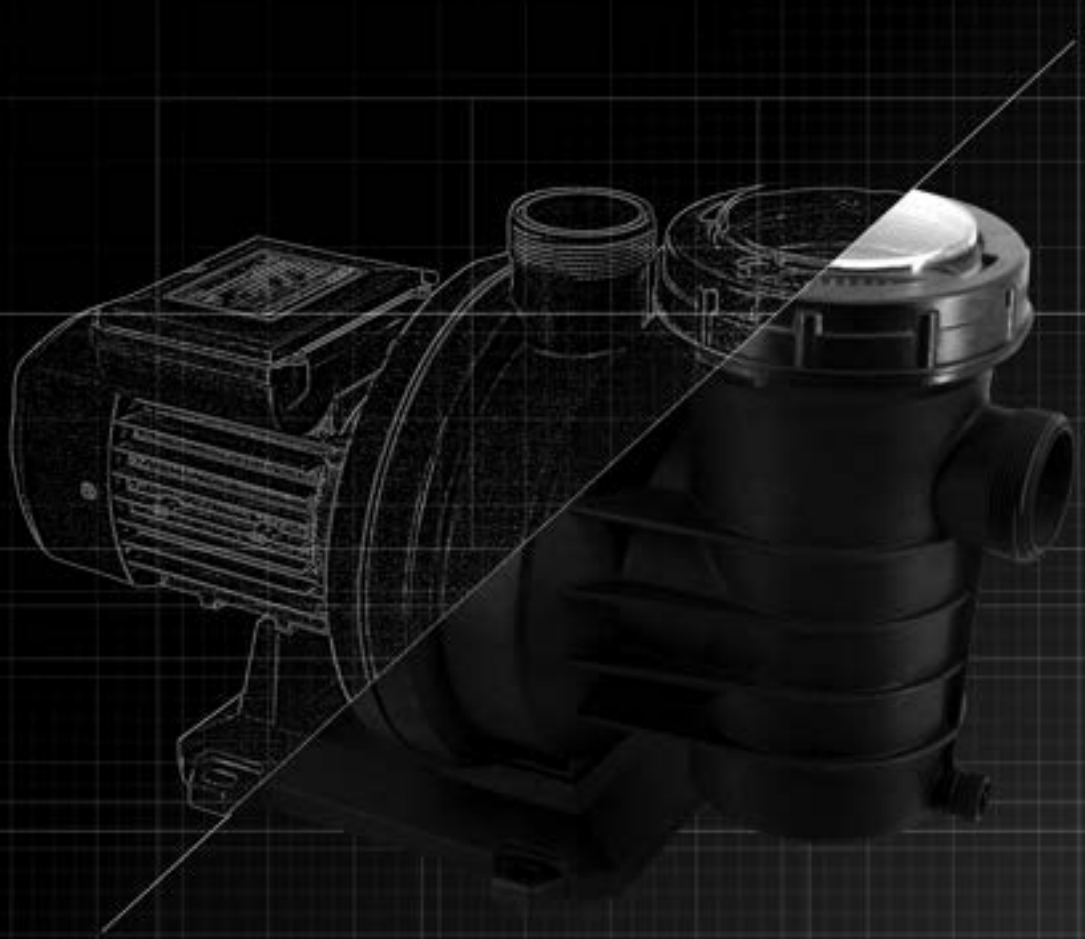


PARAMETERS

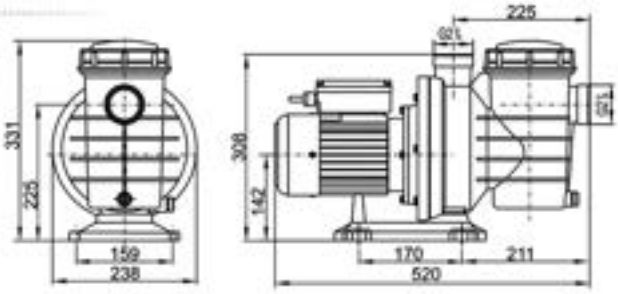
Model	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m)	Amperage (A)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
E-HP 1300	54	110	1300	230	8	6,2	1 x 1	41/20/18	11,1

SWIMMING POOL PUMPS

SWIM
JA 50
FON



SWIM

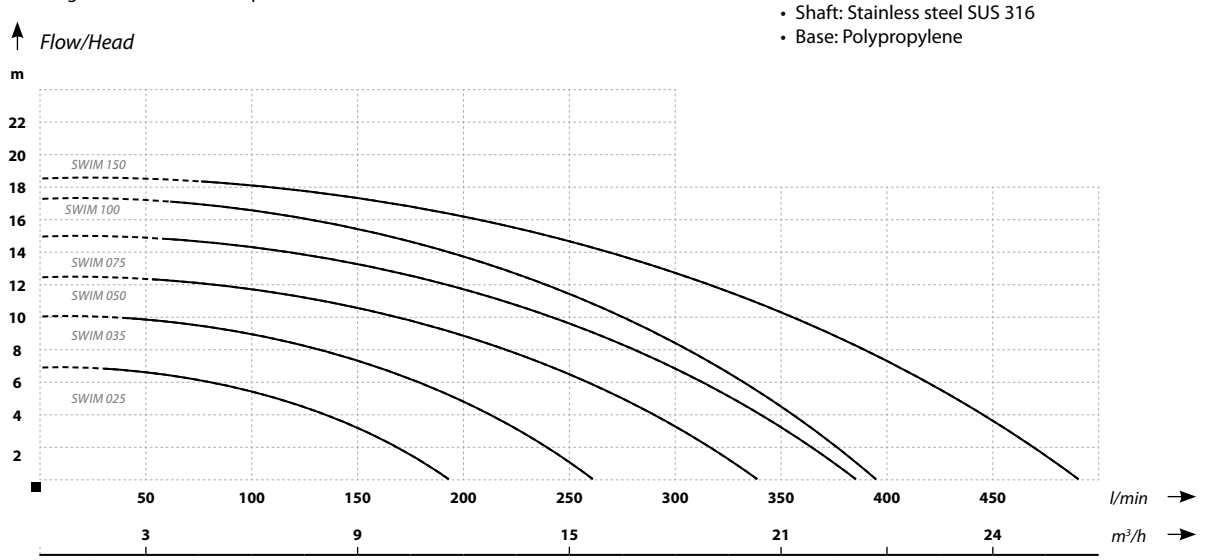


Self-priming swimming pool pump with pre-filter.
Designed for maximum efficiency of filtration and circulation of water with chlorine content. It can operate with sea water. The pump is made of plastic materials, with a catcher for leaves and larger impurities, including fibrous ones. Available with Ø 50 mm or Ø 48.5 mm inlets/outlets.

MOTOR
- Asynchronous squirrel-cage with external ventilation
- Supply voltage 220-240 V/ 50 Hz.
- IP55 Ingress Protection
- Insulation Class F
- Single-phase motor with built-in capacitor and thermal protection
- Self-lubricating ball bearings
- Rotational speed 2850 rpm
- Designed for continuous operation

OPERATING CONDITIONS:
- Water temperature: 5-50°C
- Ambient temperature: max. 50°C
- Max. working pressure: 0.3 MPa

MATERIALS:
- Pump housing: ABS
- Pre-filter: ABS
- Inlet/outlet: ABS/PVC
- Access plate: Polyethylene HD
- Impeller: Glass fibre reinforced LEXAN (resistant to abrasion by sand)
- Venturi tube: Glass fibre reinforced LEXAN (resistant to abrasion by sand)
- Mechanical seal: SiC/C
- Shaft: Stainless steel SUS 316
- Base: Polypropylene



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power		Amperage (A)	Weight (kg)
			(kW)	(HP)		
SWIM 025	7	195	0,37	0,50	1,9	9,3

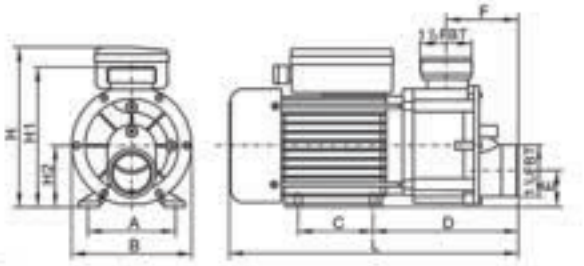
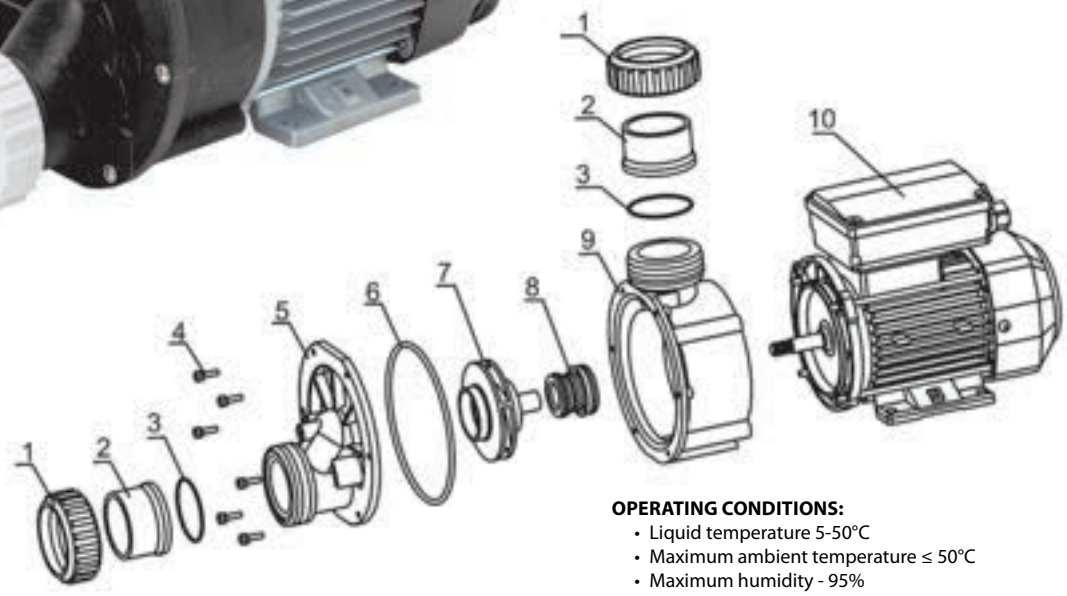
JA50



Name	Dimensions (mm)									
	A	B	C	D	E	F	G	H	H1	H2
JA50	100	153	80	164	33	89	317	191	168	63



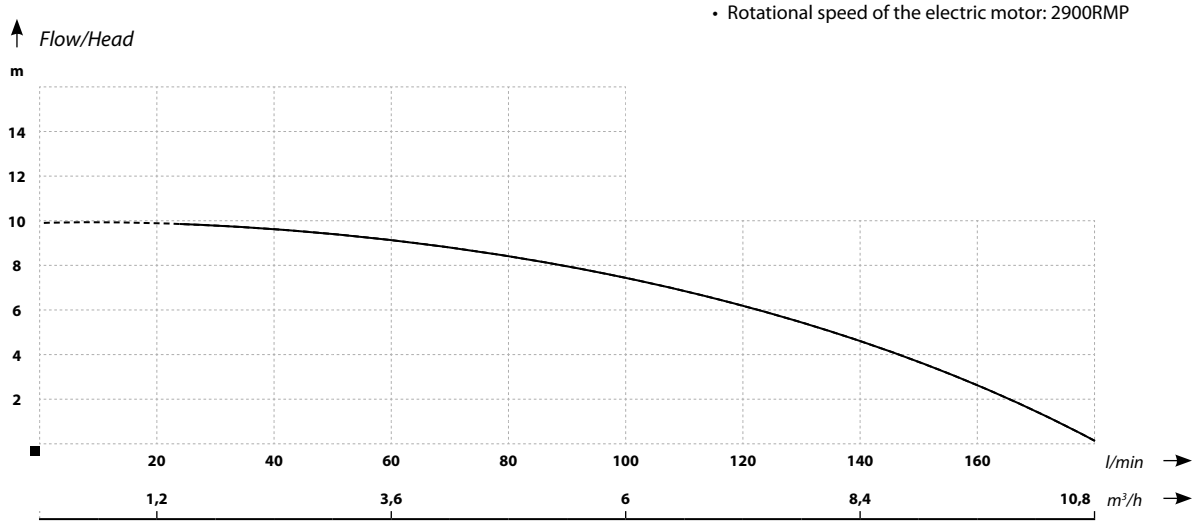
The SPA pump is designed for circulation or filtration of swimming pools, spas, whirlpool bathtubs and hot tub spas. The JA pump can also be used in pools containing sea water, e.g. fish farms. The pump motor is equipped with thermal protection and provides exceptionally low-noise operation and low vibrations. The JA50 pumps are widely used by SPA manufacturers.

OPERATING CONDITIONS:

- Liquid temperature 5-50°C
- Maximum ambient temperature ≤ 50°C
- Maximum humidity - 95%
- Class F Insulation
- Operating mode - continuous
- Protection - IP55

MATERIALS:

- Housing: plastic
- Shaft and rotor: stainless steel AISI 304
- Impeller: plastic
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2900RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m.)	Amperage (A)	Inlet/outlet (mm)	Dimensions L/H/W (cm)	Weight (kg)

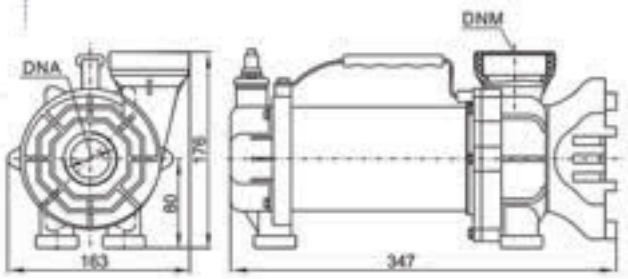
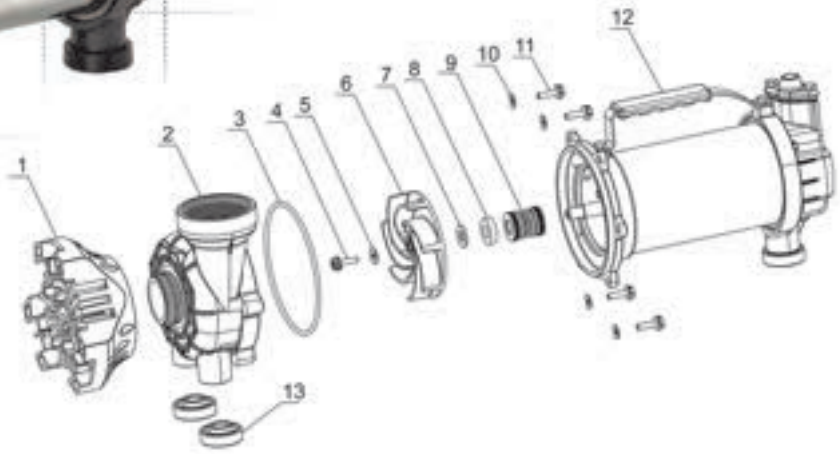
FON





Submersible fountain pumps.
The pumps are used to supply water to fountains, waterfalls, streams, ponds, decorative parts and features that using the effect of flowing water, as well as
in food processing plants and agricultural production for draining ponds and fields. The pumps have a high efficiency motor and built-in thermal protection.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Liquid type: water with small amount of sand
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Immersion depth - ≤5m

MATERIALS:

- Housing: stainless steel AISI 304 / plastic
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP

BOOSTER SETS

The booster set s a proven solution for automatic supply of water to households. Each of the IBO surface pumps can be combined in any booster set. The size of the tank is selected according to individual needs and requirements of clients.
In addition to the classic sets of pump + tank, it is possible to configure the pump with intelligent controllers such as: PC (PC-10P/ PC-13 / PC-15/PC-16/PC-59), SK(SK15) and IVR-02 frequency converters. The controllers are equipped with an additional dry-running protection. The set's operation is fully automatic - it starts the pump when the water is turned on and stops it when the water is turned off. TANKS THAT CAN BE SELECTED: IBO POZIOM / IPO PION POZIOM / IBO INOX / IBO ITALY / IBO ITALY FIX.

The set includes:
- pump,
- pressure tank,
- pressure switch,
- pressure gauge,
- five-way delivery outlet
- anti-vibration hose with elbow

AUTOIBO

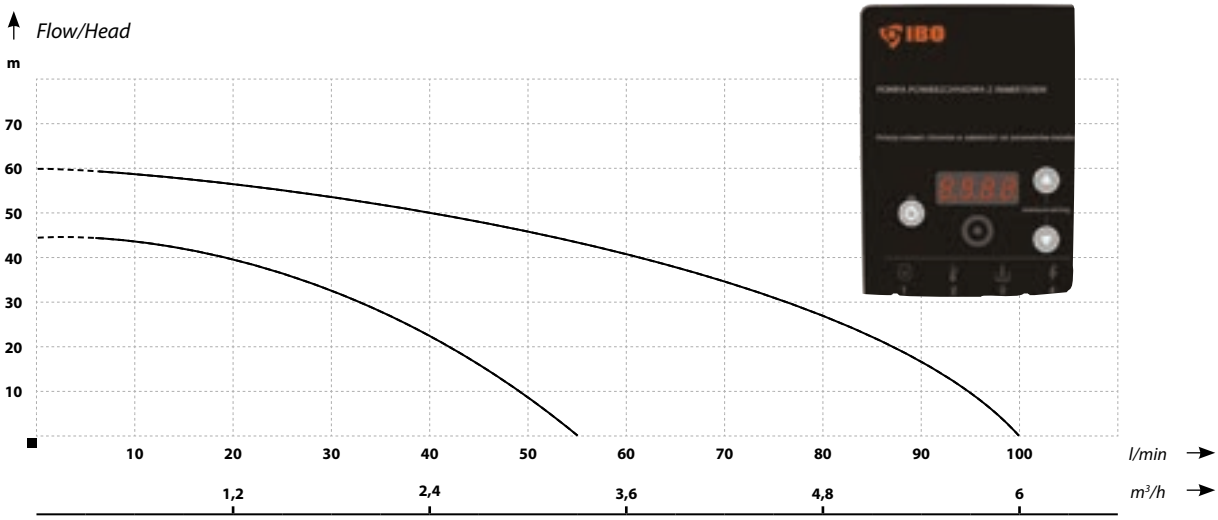
The AUTOIBO series pumps are equipped with a high performance frequency converter. Pumps equipped with frequency converters create seamless system to keep water supply system pressure constant regardless of the water demand. The frequency converter integrated into the pump will allow to reduce electricity consumption. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 60% of energy. The pump motor speed is adjusted to the various operating conditions of the water supply system.

A pump with an inverter is an easy-to-use control and protection device that maintains a constant, set water pressure by changing the rotational speed of the pump motor.

ADVANTAGES:

1. Low-noise operation: can be installed in the house.
2. Simple operation: easy to use, all functions can be terminated by pressing a button.
3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Suction capacity (m.)	Rotational speed range (rpm)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)

WZI-AUTO 900

WZI-AUTO 900 is a compact device designed to provide households with clean water from their own water intakes (wells) or to increase pressure from the water supply network. The pumps are equipped with a frequency inverter that guarantees constant pressure in all water taps, soft starts of the motor and lower current consumption compared to classical pressure boosting plants. The pumps with an integrated frequency inverter are state-of-the-art and energy efficient devices characterised by their silent operation, ease of installation and use, integrated protection against dry running, water hammer, pressure decrease or increase, or motor overload.
A very important characteristic of the IBO pumps with an integrated frequency inverter is their ease of use. Starting up and configuring the pump does not require the presence of an automation specialist - the user only has to set the operating pressure of the device using two buttons (+ and –).

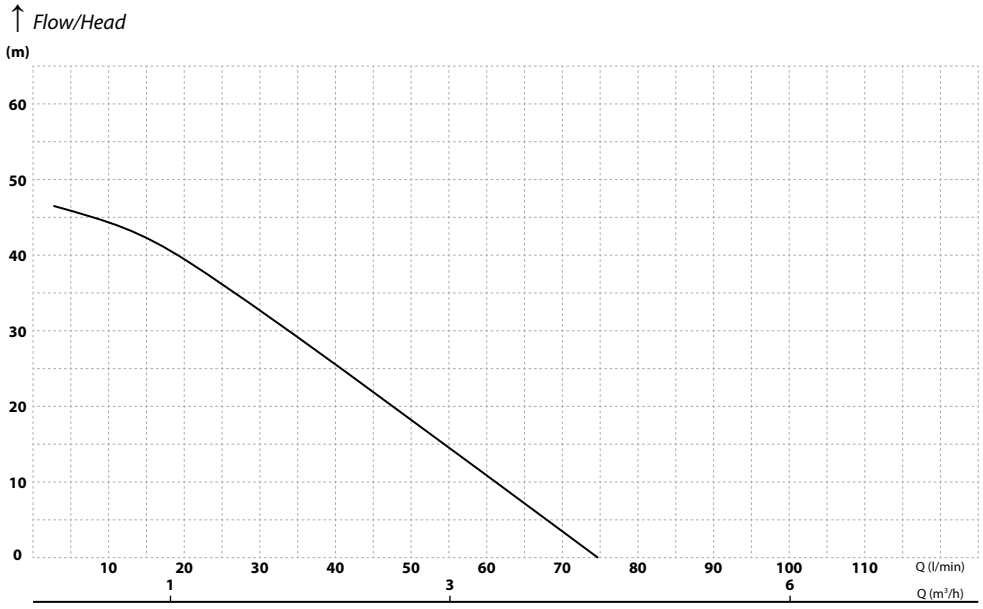
Despite utilising a small 900W motor, the WZI-AUTO 900 pump achieves very good parameters: flow rate of 75l/min and head of 43m. These parameters are sufficient to satisfy the needs of a single-family home or commercial premises. Additionally, the device is classified as S1, which means it has been designed for continuous duty.

ADVANTAGES:

- High efficiency despite utilising a small 900W motor
- Silent operation allowing the device to be installed even in usable rooms
- Ease of use and convenient operation
- Lower motor and hydraulic part wear thanks to an integrated "motor soft start"
- Constant pressure guarantee
- Protective functions: against dry running, overload, overvoltage/undervoltage, motor overload, water hammer

MATERIALS:

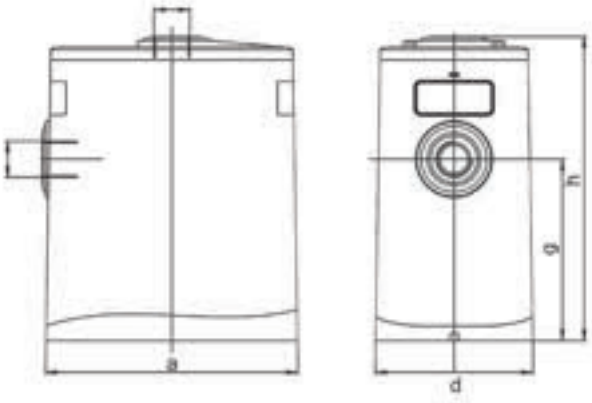
- Housing: plastic
- Impeller: Brass
- Diffuser: Cast iron
- Shaft and rotor: stainless steel AISI 304
- Inverter display: LED
- Mechanical sealing: Ceramics/graphite
- Motor rotational speed: 0-4000RPM
- Frequency range: 30-50Hz



PARAMETERS

Model	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m)	Amperage (A)	Rotational speed range (rpm)	Dimensions L/H/W (cm)	Weight (kg)
WZI 900	43	75	900	230	8	4,8/7,5	4000	26/23/25	10,1

HOME 1

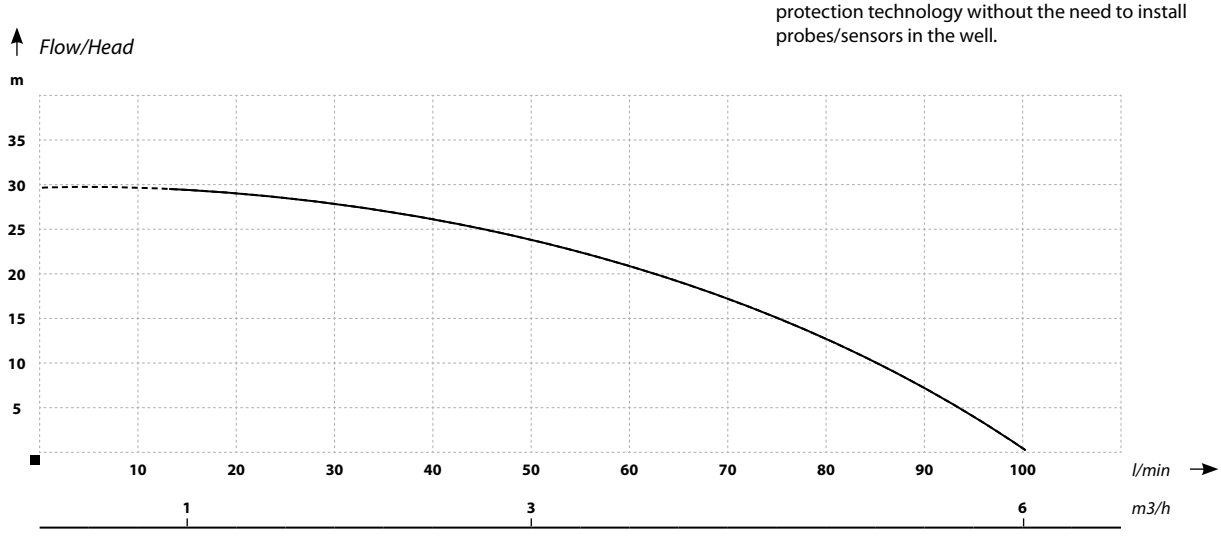


The HOME 1 series pumps are equipped with a high performance frequency converter. Pumps equipped with frequency converters create seamless system to keep water supply system pressure constant regardless of the water demand. The frequency converter integrated into the pump will allow to reduce electricity consumption. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 60% of energy. The pump motor speed is adjusted to the various operating conditions of the water supply system.

A pump with an inverter is an easy-to-use control and protection device that maintains a constant, set water pressure by changing the rotational speed of the pump motor.

ADVANTAGES:

1. Low-noise operation: can be installed in the house.
2. Simple operation: easy to use, all functions can be terminated by pressing a button.
3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.



PARAMETERS

IQ-AUTO 750

IQ-AUTO 750 is a compact device designed to provide households with clean water from their own water intakes (wells) or to increase pressure from the water supply network. The pumps are equipped with a frequency inverter that guarantees constant pressure in all water taps, soft starts of the motor and lower current consumption compared to classical pressure boosting plants. The pumps with an integrated frequency inverter are state-of-the-art and energy efficient devices characterised by their silent operation, ease of installation and use, integrated protection against dry running, water hammer, pressure decrease or increase, or motor overload.
A very important characteristic of the IBO pumps with an integrated frequency inverter is their ease of use. Starting up and configuring the pump does not require the presence of an automation specialist - the user only has to set the operating pressure of the device using two buttons (+ and –).

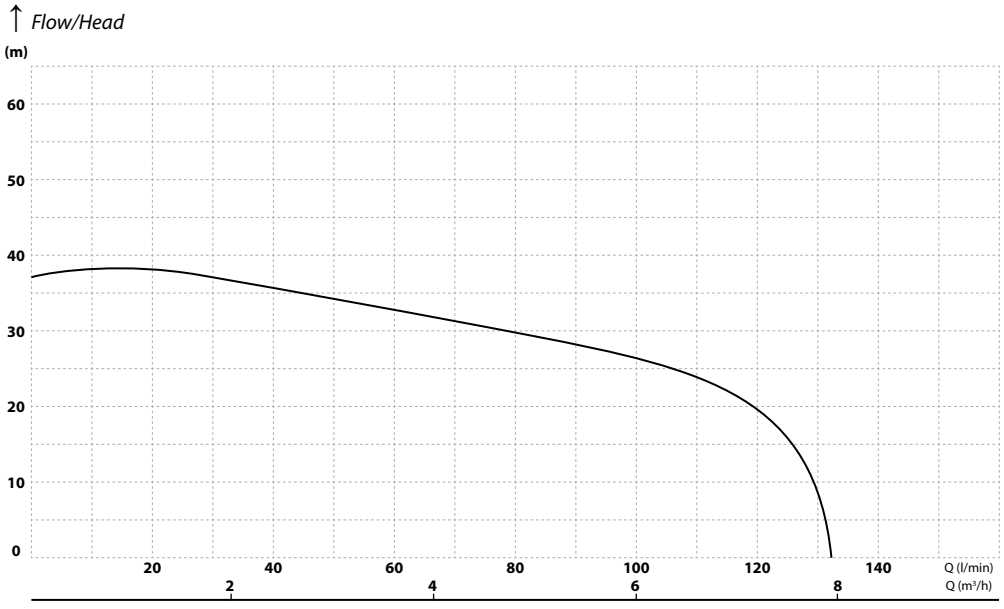
Despite utilising a small 750W motor, the IQ-AUTO 750 pump achieves a very high maximum flow rate of up to 130l /min. These parameters are sufficient to satisfy the needs of a large single-family home, including garden watering or of several commercial premises. Additionally, the device is classified as S1, which means it has been designed for continuous duty.

ADVANTAGES:

- Very high efficiency despite utilising a small 750W motor
- Silent operation allowing the device to be installed even in usable rooms
- Ease of use and convenient operation
- Lower motor and hydraulic part wear thanks to an integrated 'motor soft start"
- Constant pressure guarantee
- Protective functions: against dry running, overload, overvoltage/ undervoltage, motor overload, water hammer

MATERIALS:

- Housing: plastic
- Impeller: Stainless steel AISI 304
- Diffuser: Stainless steel AISI 304
- Shaft and rotor: AISI 304 stainless steel
- Inverter display: LED
- Mechanical sealing: Ceramics/graphite
- Motor rotational speed: 0-4000 RPM
- Frequency range: 30-50Hz



PARAMETERS

Model	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m)	Amperage (A)	Rotational speed range (rpm)	Dimensions L/H/W (cm)	Weight (kg)
IQ-AUTO 750	37	130	750	230	8	5/8	4000	47/27/28	10,9

MAGNET-AUTO 750

MAGNET-AUTO 750 is a compact device designed to provide households with clean water from their own water intakes (wells) or to increase pressure from the water supply network. The pumps are equipped with a frequency inverter that guarantees constant pressure in all water taps, soft starts of the motor and lower current consumption compared to classical pressure boosting plants. The pumps with an integrated frequency inverter are state-of-the-art and energy efficient devices characterised by their silent operation, ease of installation and use, integrated protection against dry running, water hammer, pressure decrease or increase, or motor overload.
A very important characteristic of the IBO pumps with an integrated frequency inverter is their ease of use. Starting up and configuring the pump does not require the presence of an automation specialist - the user only has to set the operating pressure of the device using two buttons (+ and –)

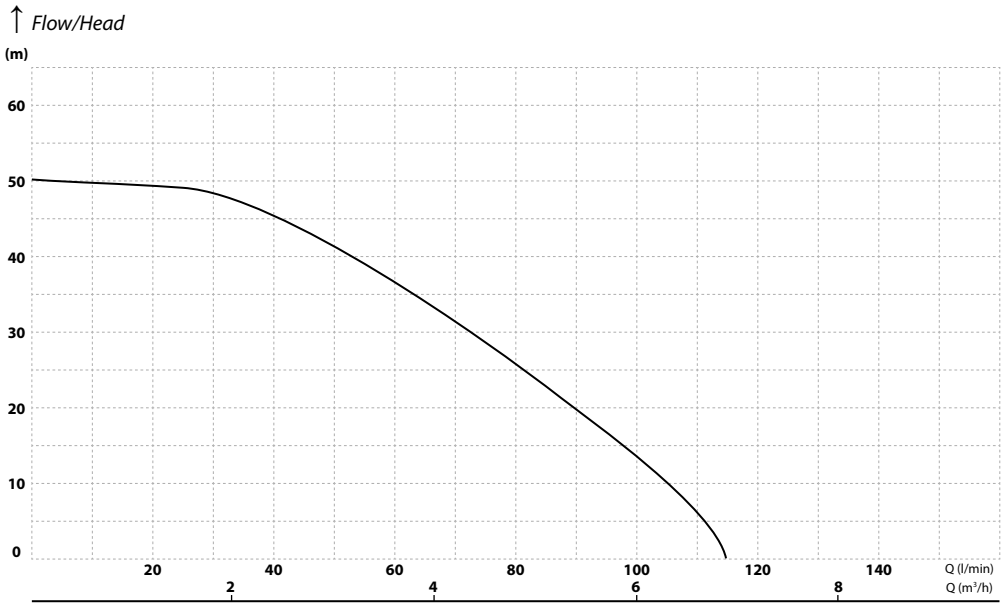
Despite utilising a small 750W motor, the MAGNET-AUTO 750 pump achieves a very high maximum flow rate of up to 115l/min. These parameters are sufficient to satisfy the needs of a large single-family home, including garden watering or of several commercial premises. Additionally, the device is classified as S1, which means it has been designed for continuous duty.

ADVANTAGES:

- Very high efficiency despite utilising a small 750W motor
- Silent operation allowing the device to be installed even in usable rooms
- Ease of use and convenient operation
- Lower motor and hydraulic part wear thanks to an integrated "motor soft start"
- Constant pressure guarantee
- Protective functions: against dry running, overload, overvoltage/undervoltage, motor overload, water hammer

MATERIALS:

- Housing: plastic
- Impeller: PPO
- Diffuser: PPO
- Shaft and rotor: stainless steel AISI 304
- Inverter display: ?LED
- Mechanical sealing: Ceramics/graphite
- Motor rotational speed: 0-4000RPM
- Frequency range: 30-50Hz



PARAMETERS

Model	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m)	Amperage (A)	Rotational speed range (rpm)	Dimensions L/H/W (cm)	Weight (kg)
MAGNET-AUTO 750	48	115	750	230	8	5/8	4000	42/22/28	10

MCI 4 AUTO

MCI series pumps are characterized by high quality of workmanship, additionally the AUTO version is equipped with a high-efficiency frequency converter. Pumps equipped with frequency converters form a well-tuned system that allows the system pressure to be kept at a constant level, regardless of the water demand. A frequency converter integrated with the pump will reduce electricity consumption. Compared to the traditional water supply, the constant pressure water supply system with frequency converter saves energy up to 60%. The speed of the pump motor is adapted to the different operating conditions of the installation. In order to maintain smooth operation, the pump is equipped with a diaphragm vessel.

The pump equipped with an inverter is an easy-to-use control and safety device, maintaining a constant set water pressure. Support the change of the pump motor rotational speed.

ADVANTAGES:

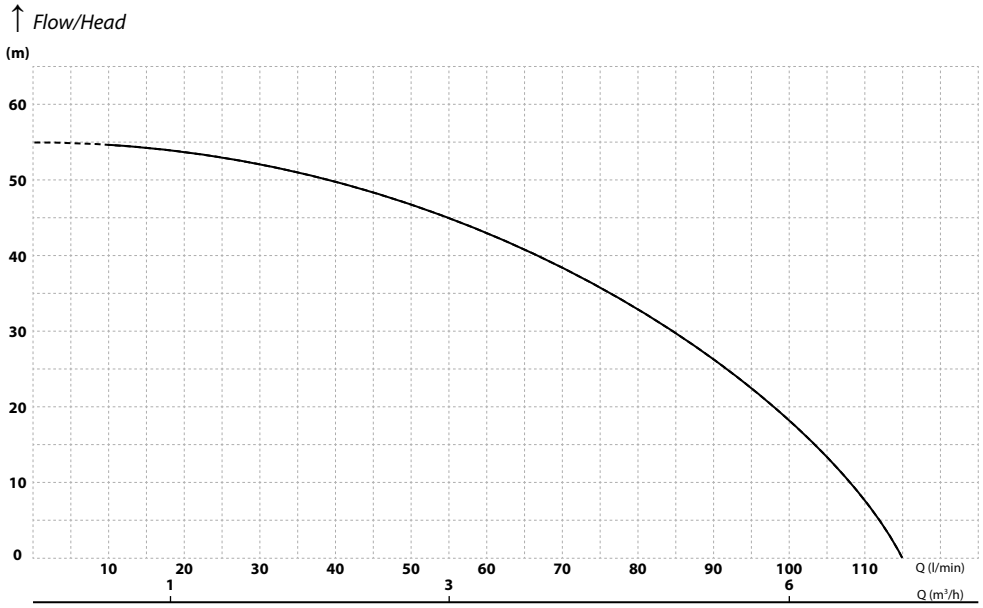
1. Quiet operation: can be installed at home
2. Simple operation: easy operation, all functions can be finished by pressing a button.
3. Reliability for many years of associated pumps: the average torque and the shaft abrasion are reduced due to the decrease in the average speed, which ensures a longer service life of the pump. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
4. Comprehensive protection: the system has the most comprehensive protection technology of overcurrent, overvoltage, undervoltage, short circuit, locked rotors, the ability to protect the pump against dry running without the need to install probes / sensors in the well.
5. The kit is equipped with a check valve
6. Economical: by using an inverter, the pump consumes much less electricity compared to sets without an inverter.

WORKING CONDITIONS:

- Liquid temperature: ≤70 ° C
- Ambient temperature: ≤50 ° C
- Maximum pressure in the installation: up to 10 bar
- Degree of protection: IP55
- Insulation class: F

MATERIALS:

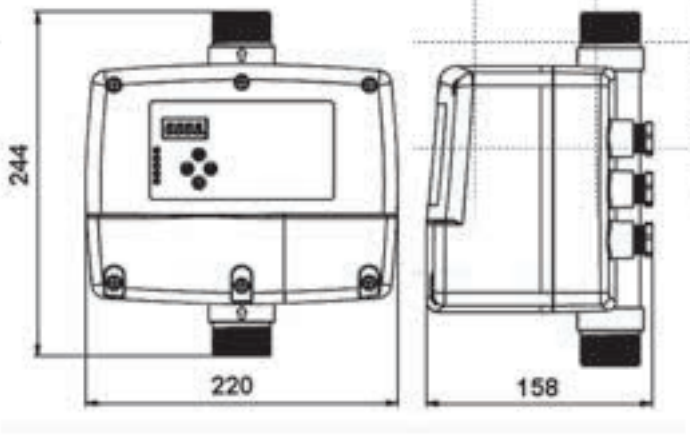
- Body - AISI 304 stainless steel.
- Shaft - AISI 304 stainless steel.
- Mechanical stuffing box - SIC / SIC / EPDM
- Connectors: stainless AISI 304
- Impellers, diffusers, diffuser covers - AISI 304 stainless steel.
- Inter-wall: AISI 304 stainless steel
- Base: Steel
- Motor: closed-frame asynchronous cage motor, aluminum housing, external ventilation.



PARAMETERS

Model	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction capacity (m)	Range of RPM	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
MCI AUTO	54	115	1200	230	8	0-3500	1¼ x 1	350/430/165	15,5

INVERTER SYSTEM – IVR–02



IVR-02M Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of 0.75 KW to 1.5 KW (from 1 HP to 2 HP) single-phase submersible pumps, surface pumps, deep well pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor.

The IVR-02M model provides many operating modes by adapting to various electrical systems.

SYSTEM ADVANTAGES

- Energy efficiency: Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 30%-60% of energy.
- Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- Simple operation: easy to use, all functions can be terminated by pressing a button, without the need to hire programming specialists.
- Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.) The ability to control the operation of two pumps supplying the system.

APPLICATION:

IVR-02M can be used in all applications where maintaining a constant water pressure in the system and control and protection of a pump or a set of two pumps is required.

IVR-02M controls automatic switching on and off, and adapts the motor speed to the requirements of the water supply system.

TYPICAL APPLICATION:

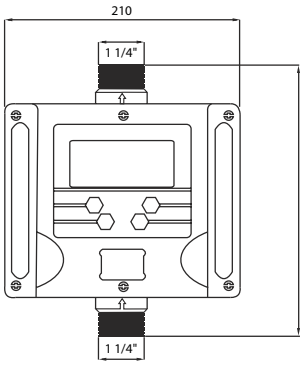
- houses
- apartments
- holiday houses
- agricultural holdings
- supply of water from the well
- irrigation of growing houses, gardens, agricultural land
- collecting and using rainwater

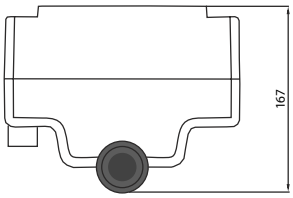
Installation data	
Permissible ambient temperature	–10°C – +40°C
Permissible ambient humidity	20% – 90% RH
Permissible liquid temperature	0°C – +50°C
Ingress Protection	IP55
Mounting orientation	Vertical
Unit dimensions (L/W/H)	244/220/158 mm
Inlet/outlet	G 1 ¼" / G 1 ¼"
Minimum capacity of pressure tank	2L

INVERTER SYSTEM – IVR–02

Main Technical Data	
Rated output power	0,37 KW – 1,5 KW (0,5 HP – 2 HP)
Rated input voltage	AC160-250V/50-60HZ (single-phase)
Pump max. amp rating	12A
Rated output voltage	AC 230V / 20-60 Hz (single-phase)
Additional pump rated output voltage	AC 230V / 50 Hz (single-phase)
Response time under overload condition	5 s – 5 min.
Pressure setting range	1 – 9 bar
Response time under open phase condition	<5 s
Response time under short-circuit condition	<0,1 s
Response time under overvoltage/undervoltage condition	<5 s.
Response time under dry-run condition	6 s
Time to activation after overload condition	30 min.
Time to activation after overvoltage/undervoltage condition	5 min.
Time to self-activation after dry-run condition	8s, 1 min, 10 min, 30 min, 1 h, 2 h ...
Deactivation limit at overvoltage	270V
Deactivation limit at undervoltage	100V
Horizontal distance	≤1000 m
Protections	Dry-run Short-circuit Overload Pump overloaded Voltage spike Undervoltage Overvoltage
Main Technical Specification	
Control specification	double flow control
	pressure control
Control method	Manual / Automatic
Liquid flow control specification	probe electrode pulse and flow switch
Pressure control specification	Pressure sensor 24 V, 4–20 mA

INVERTER SYSTEM – IVR–03





CAN BE ARRANGED IN PUMP GROUPS

IVR-03 Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of deep-well pumps, surface pumps, submersible pumps, etc., maintaining a constant, preset water pressure by varying the pump motor speed. The IVR-03 inverter utilises SPWM (sinusoidal pulse width modulation) technology and high efficiency space vector technology, with V/F VVVF (variable speed, variable frequency) control.
With real-time pressure analysis, the inverter adjusts the pump speed to the current system demand. Variable speed pump stabilizes pressure and saves water and electricity.

Important features that distinguish IVR–03 from popular on/off control devices:

1. Energy efficiency. The water supply system with frequency converter saves 30%-60% of energy compared to a traditional set-up.
2. Simple operation: easy to use, all functions can be terminated by pressing a button without the need to hire programming specialists.
3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the water hammer means a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
5. Ability to control the operation of several pumps supplying the system.

APPLICATION

IVR-03 can be used to increase the water pressure in various installations such as residential, commercial, industrial, water treatment plants, agriculture, etc.

- Ease of installation and operation. No need to hire a qualified service technician to connect the unit
- Advanced technology, PID algorithm control, technology addressed for pump drive control
- Reliable and fail-safe. The unit has various built-in protections. Dry-running protection, short-circuit protection, overload protection, under-voltage protection, over-voltage protection, rotor lockout protection, etc.
- Energy-saving. The controller effectively saves between 30% and 60% of electrical energy.
- Complies with CE product safety requirements, and meets environmental protection requirements
- The device improves the quality of life

PARAMETERS

Model	1,1 KW	1,1 KW	1,5 KW	1,5 KW	2,2 KW	2,2 KW
Max. admissible motor current consumption	230V - 9A	400V - 4,5A	230V - 11A	400V - 5,5A	230V - 12A	400V - 7A
Input power	Single-phase or three-phase power supply					
Input voltage	230V or 400V					
Allowed range voltage supply	160V–260V (230V) or 300V–450V (400V)					
Current frequency power	50Hz					
Output voltage	1~AC 230V or 3~AC 400V					
Controlled device	Pump					
frequency range output	20~50Hz					
Pressure sensor	24V,4÷20mA					
Pressure range	0.5 ÷ 9.0bar					
Installation required – pressure vessel	Tank with a volume of not less than 2L					
Ambient temperature range	0~+40°C					
Medium	Clean water at a temperature of 0 to +100°C					
Pressure required for automatic start	0.3 bar lower than the set operating pressure, but not lower than 0.5 bar					
Electric installation	Absolutely effectively grounded					
Control characteristics	Dual flow control					
Fluid flow control characteristics	Sampler electrode pulse and flow switch					

INVERTER SYSTEM – IVR–05

Our Intelligent Pump Controller, IVR-05 model, is an easy-to-use control and protection device for direct connection of deep-well pumps, surface pumps, submersible pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor. The IVR-05 inverter utilises the SPWM technology (sinusoidal pulse width modulation) and a highly-efficient spatial vector, using V/F VVVF control (variable velocity, variable frequency).

APPLICATION:

- The IVR-05 can be used to increase water pressure in various systems such as residential houses, commercial premises, industry, water treatment stations, agriculture etc.
- Ease of installation and use. No need to have the device connected by a qualified service technician
- Advanced technology, PID algorithm control, technology dedicated to pump drive control
- Trustworthy and reliable. The device has various integrated protection features. Protection against dry running, short-circuit, overload, undervoltage, overvoltage, impeller blocking etc.
- Energy efficient. The controller effectively saves 20% - 60% of electric energy.
- It meets the requirements regarding CE product safety and fulfils the environmental protection requirements.

Thanks to real-time pressure analysis, the inverter adjusts the rotational speed of a pump to system's demand at a given time. Variable rotational speed of the pump stabilises pressure, thus reducing water and current consumption.

Its important feature that distinguishes the controller from popular on/off control devices is:

- Energy efficiency. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves 30%-60% of energy.
- Simple operation: easy to use, all functions can be terminated by pressing a button without the need to hire programming specialists.
- Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
- Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- Possibility of controlling several pumps supplying the system.

INVERTER SYSTEM – IVR –10 S/T

IVR-10 S/T Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of 1.1 KW do 2.2 KW (from 1.5 HP to 2.5 HP) single-phase (IVR-10S) or 3-phase (IVR-10T) deep well pumps, surface pumps, submersible pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor. The IVR-10 S/T model provides many operating modes by adapting to various electrical systems.
Its important feature that distinguishes it from popular on/off control devices is:

1. Energy efficiency. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 30%-60% of energy.
2. Simple operation: easy to use, all functions can be terminated by pressing a button, without the need to hire programming specialists.
3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
5. The controllers can be combined into pump groups of up to 6 pumps. The group is controlled by one main controller selected by the user while other controllers adjust the operation to the system requirements. The set is very easily programmable and does not require the assistance of the programmer.

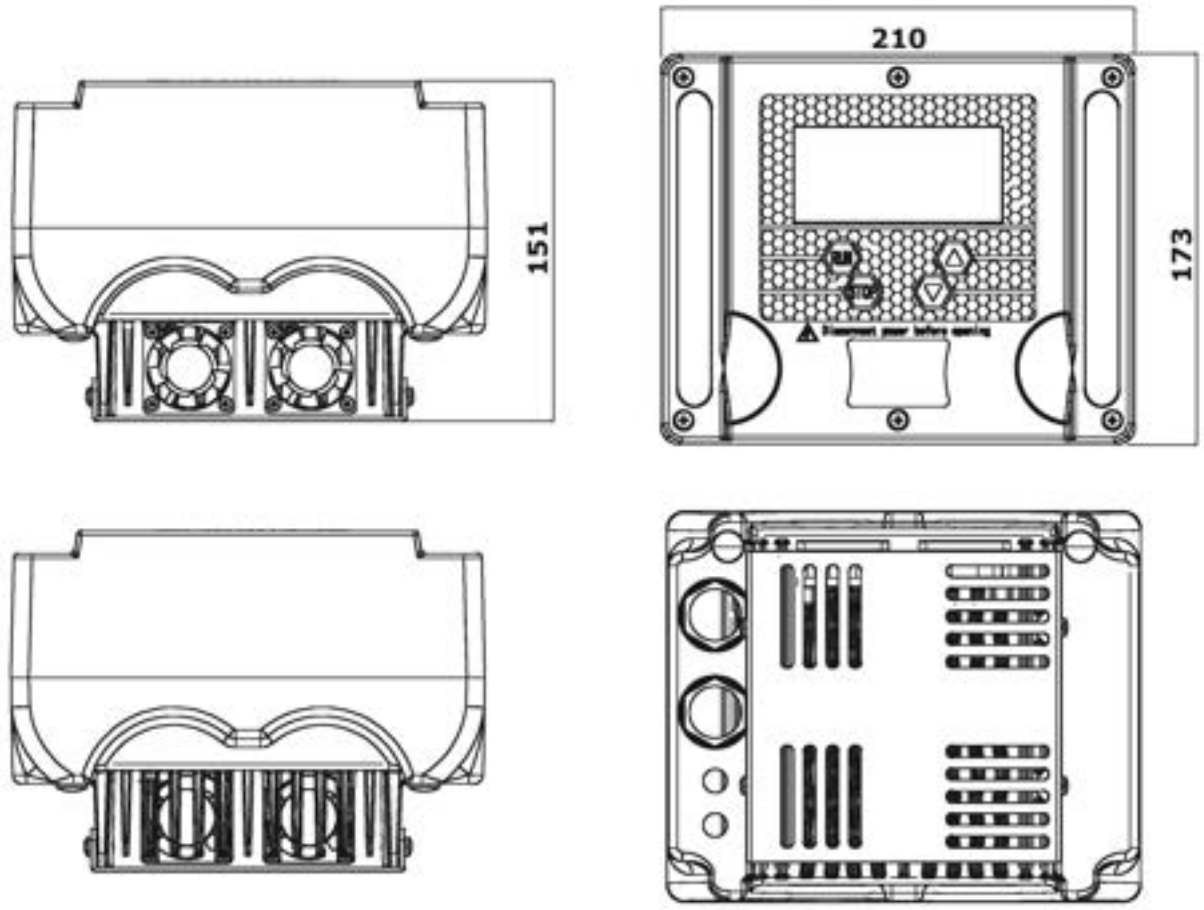
CAN BE ARRANGED IN PUMP GROUPS

APPLICATION:
IVR-10S/T can be used in all applications where maintaining a constant water pressure in the system, as well as control and protection of a single pump that controls automatic switching on and off by various electrical systems is required.

TYPICAL APPLICATION:
- houses / apartments / holiday houses,
- agricultural holdings,
- supply of water from the well,
- irrigation of growing houses, gardens, agricultural land,
- collecting and using rainwater,
- industrial equipment.

PATENT no. 007724539-0001

INVERTER SYSTEM – IVR–20/30/40



PARAMETERS

Name	Pump power (kW)	Dimensions (mm)	Pressure setting range (bar)	Operating current (A)	Input voltage (V)	Output voltage (V)	Input voltage frequency (Hz)	Output voltage frequency (Hz)	Pressure sensor

	3/4 kW			10A					
	5,5/7,5 kW			18A					

INVERTER SYSTEM – IVR–09T

CAN BE ARRANGED IN PUMP GROUPS

IVR-09T Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of 0.75 KW to 7.5 KW (from 1 HP to 10 HP) 3-phase deep well pumps, surface pumps, submersible pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor. The IVR-09T model provides many operating modes by adapting to various electrical systems. The IVR-09 series controllers can be used in pump groups of up to 6 pumps. Its important feature that distinguishes it from popular on/off control devices is:

1. Energy efficiency. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 30%-60% of energy.
2. Simple operation: easy to use, all functions can be terminated by pressing a button, without the need to hire programming specialists.
3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer. (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
5. The controllers can be combined into pump groups of up to 6 pumps. The group is controlled by one main controller selected by the user while other controllers adjust the operation to the system requirements. The set is very easily programmable and does not require the assistance of the programmer.

APPLICATION:
IVR-09t can be used in all applications where maintaining a constant water pressure in the system and control and protection of a pump or a set of two pumps is required.
Typical application:

- houses / apartments / holiday houses
- agricultural holdings
- supply of water from the well
- irrigation of growing houses, gardens, agricultural land
- collecting and using rainwater
- industrial equipment

INVERTER SYSTEM – IVR–09T

Main Technical Data	
Rated output power	0,37 KW – 7,5 KW (0,5 HP – 10 HP)
Rated input voltage	AC~3x400V/50-60HZ (3-phase)
Rated output voltage	AC ~3x400V / 20-60 Hz (3-phase)
Response time under overload condition	5 s – 5 min.
Pressure setting range	1 – 9 bar
Response time under open phase condition	<5 s
Response time under short-circuit condition	<0,1 s
Response time under overvoltage/undervoltage condition	<5 s.
Response time under dry-run condition	6 s
Time to activation after overload condition	30 min.
Time to activation after overvoltage/undervoltage condition	5 min.
Time to self-activation after dry-run condition	8s, 1 min, 10 min, 30 min, 1 h, 2 h ...
Deactivation limit at overvoltage	418V
Deactivation limit at undervoltage	324V
Horizontal distance	≤1000 m
Protections	Dry-run Short-circuit Overload Pump overloaded Voltage spike Undervoltage Overvoltage

Main Technical Specification	
Control specification	double flow control
	pressure control
Control method	Manual / Automatic
Liquid flow control specification	probe electrode pulse and flow switch
Pressure control specification	Pressure sensor 24 V, 4–20 mA
Installation Conditions	
Permissible ambient temperature	–10°C – +40°C
Permissible ambient humidity	20% – 90% RH
Permissible liquid temperature	0°C – +100°C
Ingress Protection	IP54
Mounting orientation	Vertical
Minimum pressure tank capacity	4L
Motor power	**Max. Motor Current**
0,75-1.5 kW / 1-2 HP	4.3A
2.2 kW / 3 HP	6.1A
3.0-4.0 kW / 4-5,5 HP	9.7A
5.5 kW / 7.5 HP	14A
7.5 kW / 10 HP	18A

MULTI SET IVR–02

The set is equipped with the IVR-02 (230V) frequency converter and the set of HP 1500 INOX or MH 1300 INOX pumps. Multi-Set is an easy-to-use device designed for pumping of clean water in order to increase pressure in water supply systems, maintaining a constant, set water pressure by changing the rotational speed of the pump motor, with additional control and protection features.

ADVANTAGES:

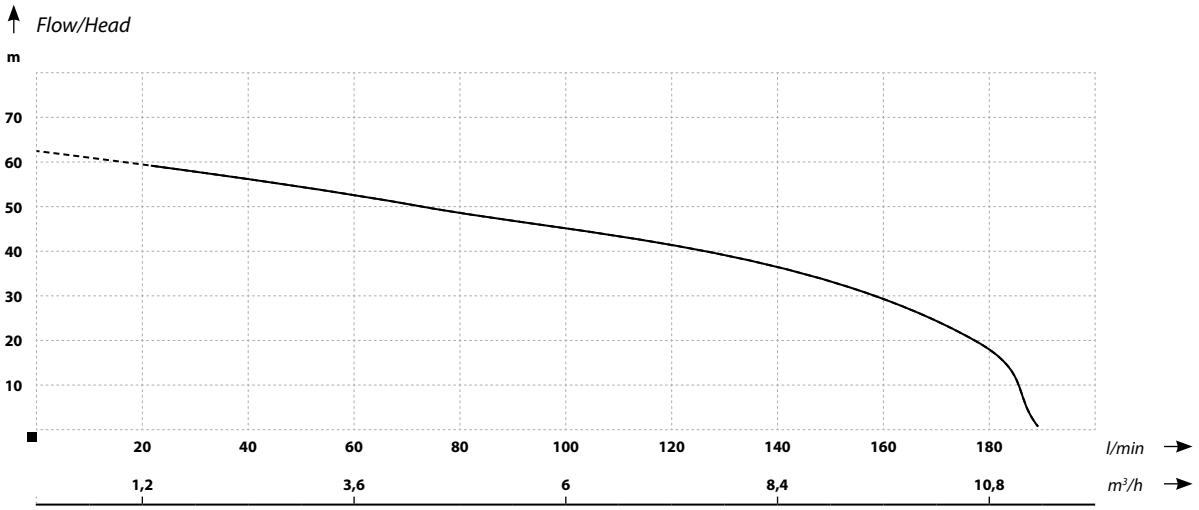
- Energy efficiency: reduction of energy consumption by 30%–60%..
- Simple operation: all functions can be terminated by pressing a button.
- Reliability: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime.
- Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
- Fully protected: the system incorporates the overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- The ability to control the operation of two pumps that supply the system.
- Low-noise operation.

DESIGN

- Pumps x 2 - HP 1500INOX (MH 13000INOX)
- Frequency converter - IVR-02 (230V)
- IBO ITALY steel fittings
- Check and water stop valves and fittings
- 8L IBO ITALY pressure vessel

APPLICATION

- Houses
- Apartments
- Holiday houses
- Agricultural holdings
- Supply of water from the well
- Irrigation of growing houses, gardens, agricultural land
- Collecting and using rainwater
- Industrial equipment



PARAMETERS

MULTI SET IVR–09

The set is equipped with the IVR-09 (400V) / IVR-11(400V) frequency converter and the CV series pump/pumps. Multi-Set is an easy-to-use device designed for pumping of clean water in order to increase pressure in water supply systems, maintaining a constant, set water pressure by changing the rotational speed of the pump motor,
with additional control and protection features.

ADVANTAGES:

- Energy efficiency: reduction of energy consumption by 30%–60%..
- Simple operation: all functions can be terminated by pressing a button.
- Reliability: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
- Fully protected: the system incorporates the overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- The ability to control the operation of two pumps that supply the system.
- Low-noise operation.

DESIGN

- Pumps x 1/x 2/x 3/x 4/x 5/x 6 - (CV3 – Cv15)
- Frequency converter - IVR-09 (400V) / IVR-11 (400V)
- IBO ITALY steel fittings
- Check and water stop valves and fittings
- IBO ITALY pressure vessel

APPLICATION

- Houses
- Apartments
- Holiday houses
- Agricultural holdings
- Supply of water from the well
- Irrigation of growing houses, gardens, agricultural land
- Collecting and using rainwater

IP INOX

IP

IP 400 MINI

IP RAIN

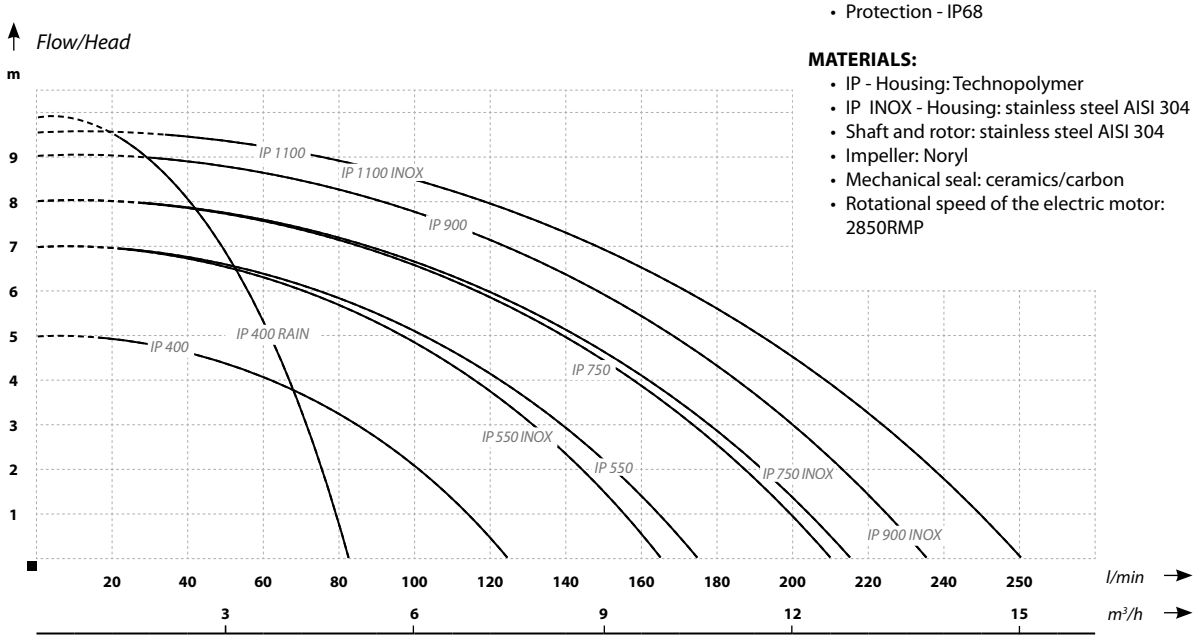
IP submersible plastic pumps designed for pumping clean and slightly contaminated water. The pumps have an outlet connection to which discharge hoses of different diameters can be connected depending on the user's requirements. Small size and light weight make the pumps exceptionally easy to operate and maintain. The pumps are equipped with float switches for automatic pump control. All pumps are supplied with thermal protection mounted in the motor winding.

IP INOX pumps have a similar design to IP pumps but their housing is made of high quality AISI 304 stainless steel.

APPLICATION:
Draining flooded rooms, swimming pools, wells. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level. The pumps can also be used for pumping rainwater.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- IP - Housing: Technopolymer
- IP INOX - Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Mechanical seal: ceramics/carbon
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)

IPE
IPK

IPE 400

IPK 400

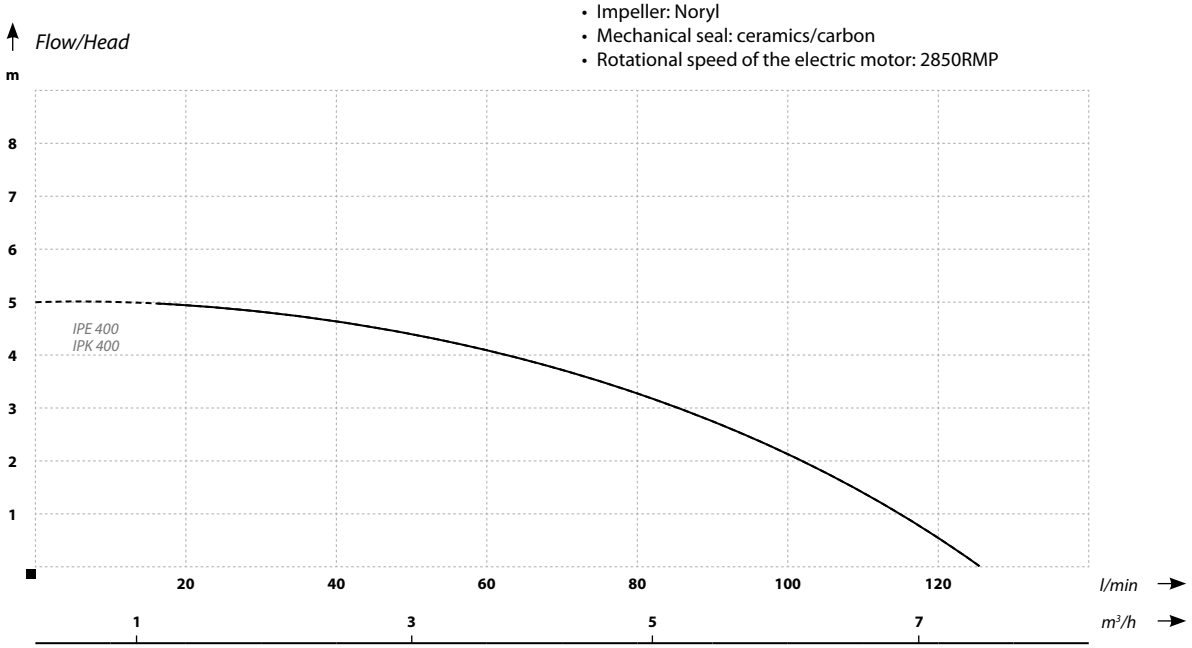
IPE 400 - a submersible plastic pump designed for pumping clean and slightly contaminated water. The pumps have an outlet connection to which discharge hoses of different diameters can be connected. IPE400 is equipped with an electronic float/probe so the pump can be used in narrow wells. Small size and light weight make the pumps exceptionally easy to operate and maintain. All pumps are supplied with thermal protection mounted in the motor winding.

IPK 400 - the pump has a similar design to IPE pumps but the switch is not based on the probes but on the float operating in a vertical position inside a special channel. Like IPE pump, it can be placed in a narrow well, which may not be possible with IP pumps due to a float switch connected with a 30 cm cable, which increases the diameter of the pump.

APPLICATION:
Draining flooded rooms, swimming pools, wells. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level. The pumps can also be used for pumping rainwater.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- IPE / IPK
- Housing: Technopolymer
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Mechanical seal: ceramics/carbon
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
IPE 400	5	125	400	230	30	3	1 - 1½	23/39	4
IPK 400	5	125	400	230	30	3	1 - 1½	26/39	4,5

IPC 550

Adapter 1

Adapter 2

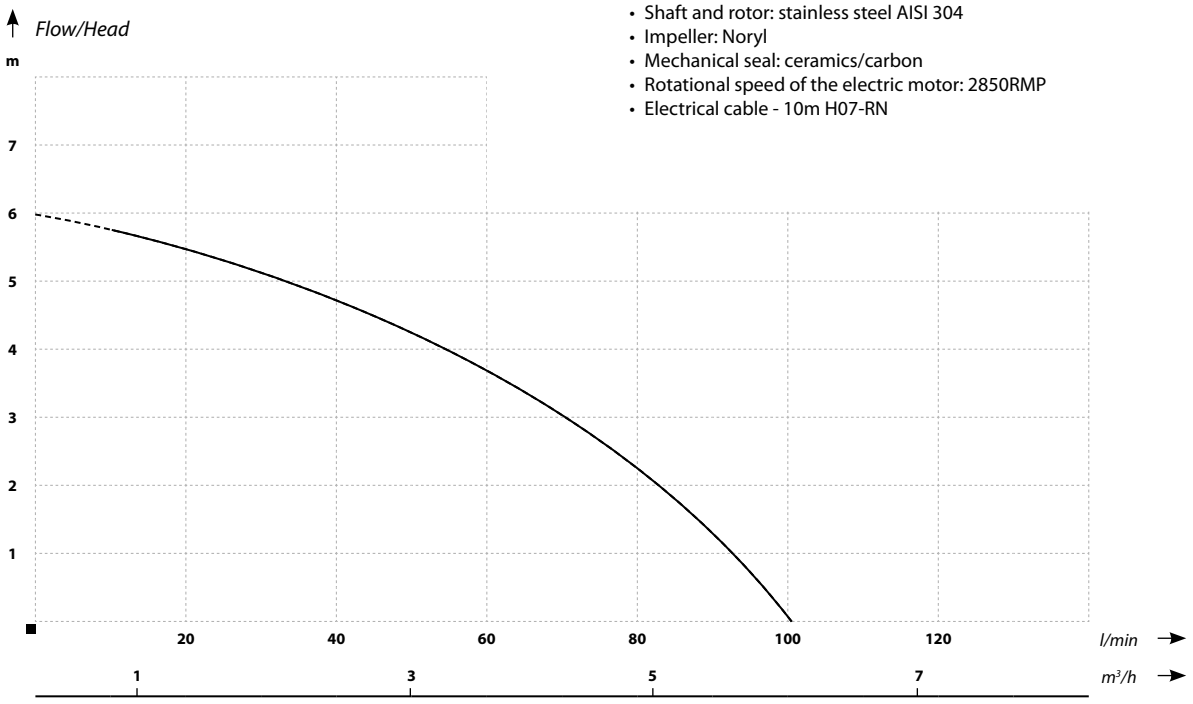
Adapter 3

A submersible plastic pump designed for pumping clean and slightly contaminated water. IPC 550 pump has a threaded outlet connection with a built-in non-return valve to which 3 different adapters can be attached in order to adapt the outlet diameter to individual requirements. The pumps have a cooling jacket so they do not have to be fully submerged. After removing the suction filter, water can be pumped-off down to 1 mm. Pumping can start at above 5 mm water level. Like IPE and IPK pumps, the IPC 550 pump is equipped with an integrated switch so it can be used in narrow wells. An additional advantage is the option to select the automatic or manual operating mode. Like IPE and IPK pumps, all pumps are supplied with thermal protection mounted in the motor winding.

APPLICATION:
Draining flooded rooms, swimming pools, wells. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level. The pumps can also be used for pumping rainwater.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

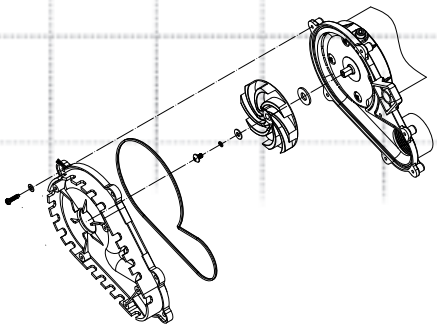
MATERIALS:
- IP - Housing: Technopolymer
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Mechanical seal: ceramics/carbon
- Rotational speed of the electric motor: 2850RMP
- Electrical cable - 10m H07-RN



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
IPC 550	6	100	550	230	5	2.4	1½	20/31	4

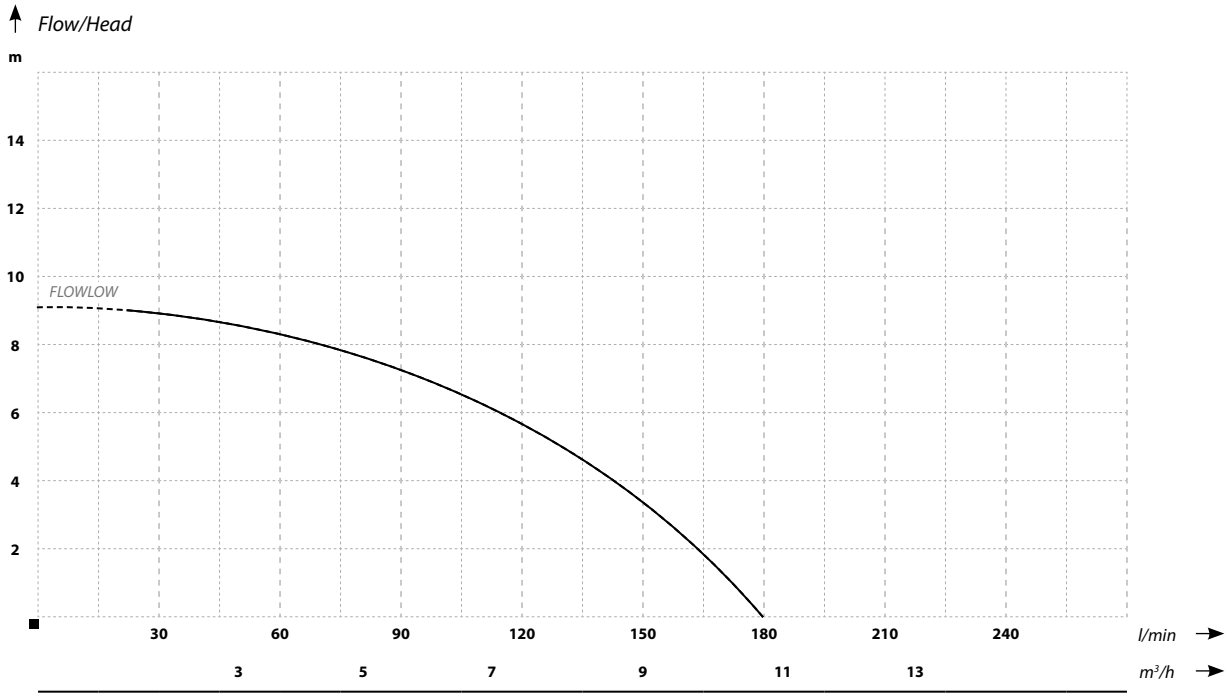
FLOW LOW



Flowlow - 0,25INOX series are designed for clean and slightly polluted water, where water must be pumped out to a low level. The pumps are used for draining flooded rooms, swimming pools and sumps. They can also pump water from ponds, rivers, reservoirs and shallow wells.

CHARACTERISTICS:

- The pump can pump out water to a level of about 5cm
- Pole float switch
- Threaded discharge port for easy connection of discharge hose using a hose clamp or quick release coupling
- Top quality materials
- Thermal protection built into the motor winding
- 24 months warranty
- Warranty and post-warranty service
- Impeller: Plastic



PARAMETERS

FLOW LOW 0,25	9	180	250	230	2	1,5"	25,1/30,3	6

NEMO/ VM60

VIBRATION PUMPS

VM60

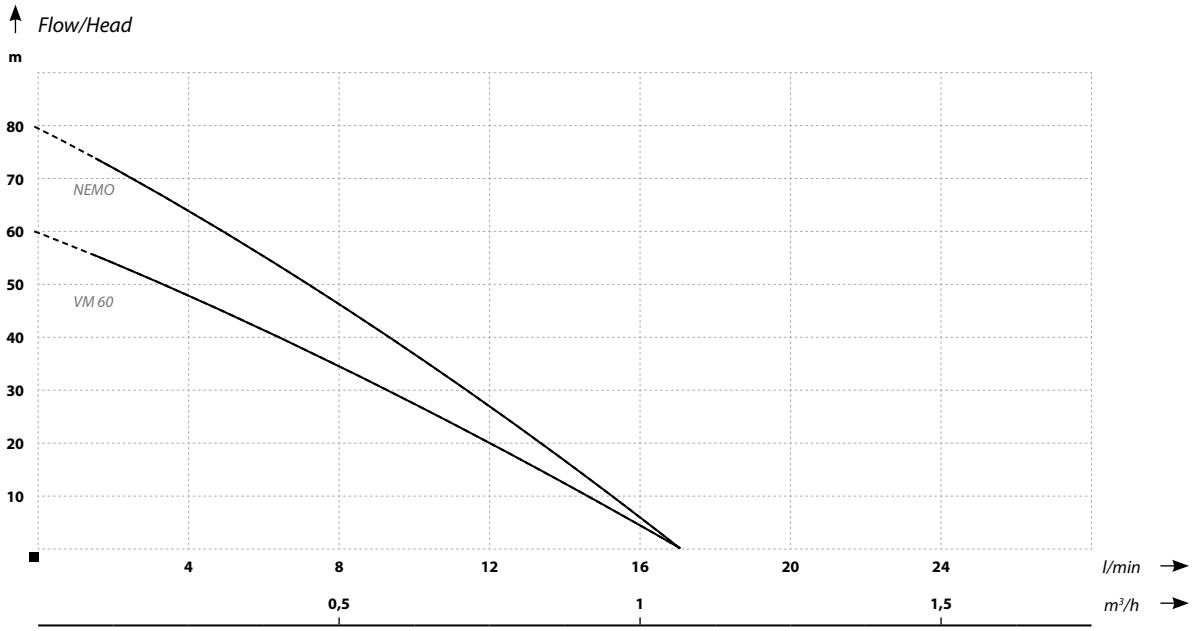
NEMO

105 mm diameter vibration pumps for irrigation. Due to their high efficiency, NEMO and VM60 submersible vibration pumps are perfect for irrigation with clean water. Despite the small size, the pump design based on solenoids allows creating high pressure required for irrigation. Due to their compact size and low weight, vibration pumps are very popular among allotment gardeners. Pumps are equipped with a 10 m power cable. Pump housing is made of aluminium. Compact-size Nemo and VM60 pumps can operate even in small wells. The minimum diameter of a drilled well in which the pump can be used is 120 mm.

APPLICATION:
Supply of water to small holiday houses and irrigation of gardens.

OPERATING CONDITIONS:

- Maximum liquid temperature 20°C
- Maximum ambient temperature 40°C
- Thermal protection: no
- Class B Insulation
- Operating mode - in 30 min. cycles
- Protection - IP68
- Rotational speed of the electric motor: 2850RMP
- Electrical cable - 10m H07-RNF



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
VM 60	60	17	250	230	3,5	3/8	105/180	4
NEMO	80	17	250	230	3,5	½	105/180	4

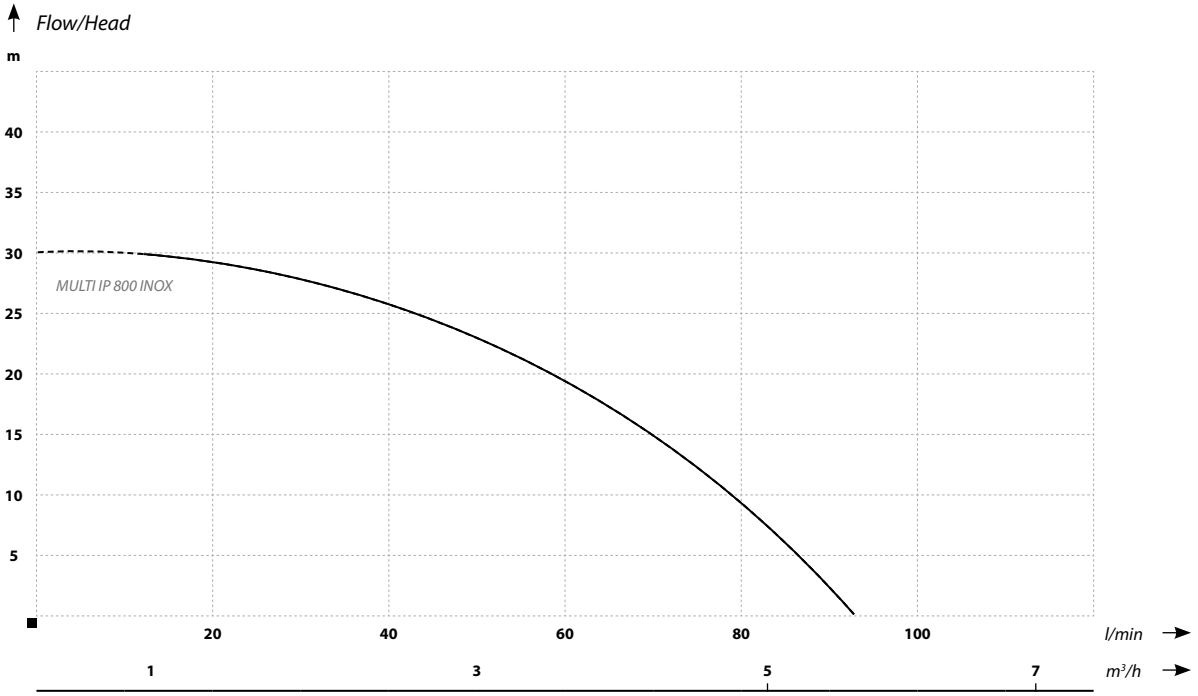
MULTI IP 800 INOX

Pumps with the same hydraulic components as Multi IP 800 INOX but with the the built-in pump operation controller instead of the float switch. When the outlet valve is closed, the pump is stopped and goes into standby mode maintaining a constant pressure in the system. When the outlet valve is opened, the pump will automatically start.

APPLICATION:
Supplying houses with water from ring wells and for garden irrigation systems. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Motor housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Mechanical seal: ceramics/carbon/NBR
- Rotational speed of the electric motor: 2850RMP
- Electrical cable - 10m H07-RNF



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
MULTI IP 800 INOX	30	92	800	230	0,5	3,5	1 / 1 ½	17/36	8,25

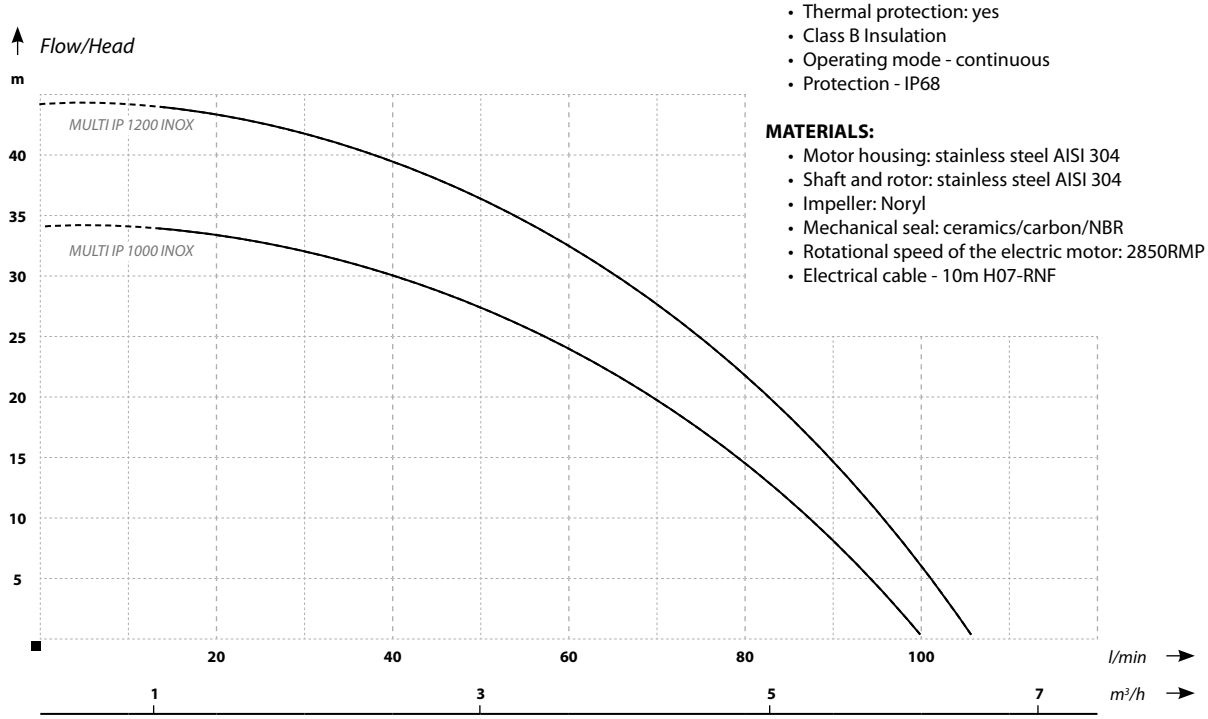
MULTI IP INOX 1000/1200

A series of high pressure submersible pumps for irrigation. The pumps have a stainless steel housing and multi-stage hydraulics. The pumps have a cooling jacket so that they do not have to be fully submerged. A filter screen fitted in the bottom of the pump allows water to be pumped down to 10 cm. Both Multi IP INOX pumps are equipped with a float switch for automatic pump control. Like IPE and IPK pumps, all pumps are supplied with thermal protection mounted in the motor winding.

APPLICATION:
Supplying houses with water from ring wells and for garden irrigation systems. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Motor housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Mechanical seal: ceramics/carbon/NBR
- Rotational speed of the electric motor: 2850RMP
- Electrical cable - 10m H07-RNF



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
MULTI IP 1000 INOX	34	100	1000	230	0,5	3,7	1½	18/41	10
MULTI IP 1200 INOX	44	105	1200	230	0,5	4,8	1½	18/41	11

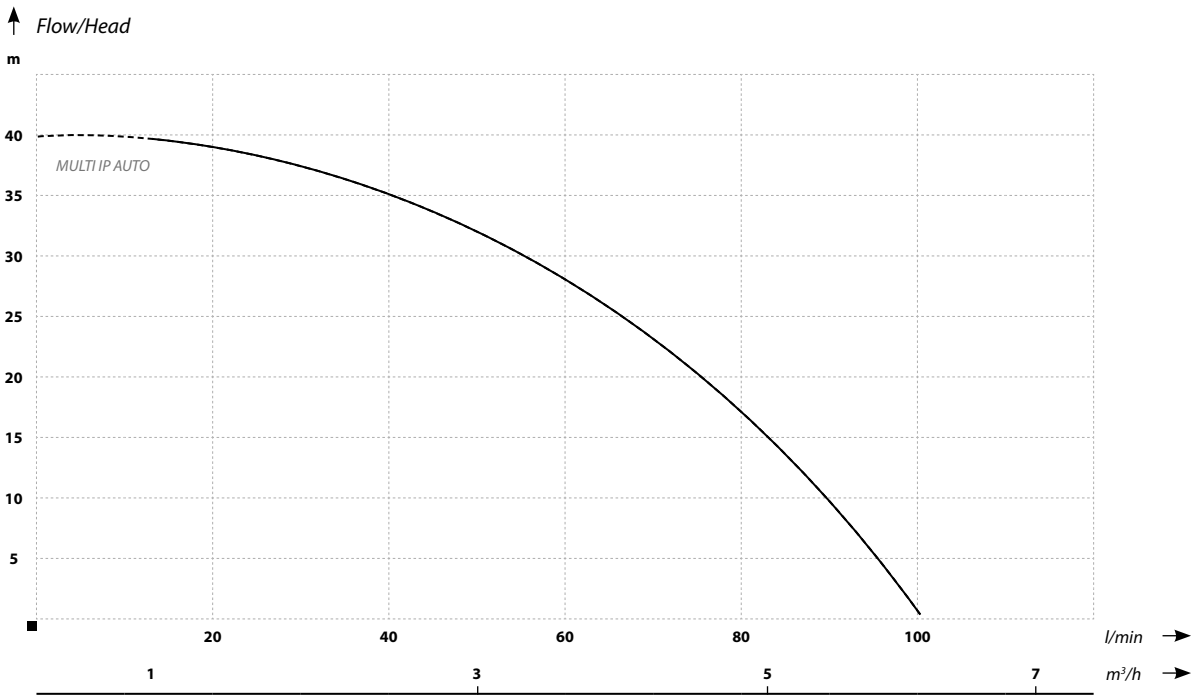
MULTI IP 1000 AUTO

Pumps with the same hydraulic components as Multi IP 800 INOX but with the the built-in pump operation controller instead of the float switch. When the outlet valve is closed, the pump is stopped and goes into standby mode maintaining a constant pressure in the system. When the outlet valve is opened, the pump will automatically start.

APPLICATION:
Supplying houses with water from ring wells and for garden irrigation systems.
The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Motor housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Mechanical seal: ceramics/carbon/NBR
- Rotational speed of the electric motor: 2850RMP
- Electrical cable - 10m H07-RNF



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
MULTI IP 1000 AUTO	40	100	1000	230	0,5	5,2	1 / 1 ½	17/53	10

MULTI IP 1200 AUTO
MULTI IP 1200 AUTO RAIN

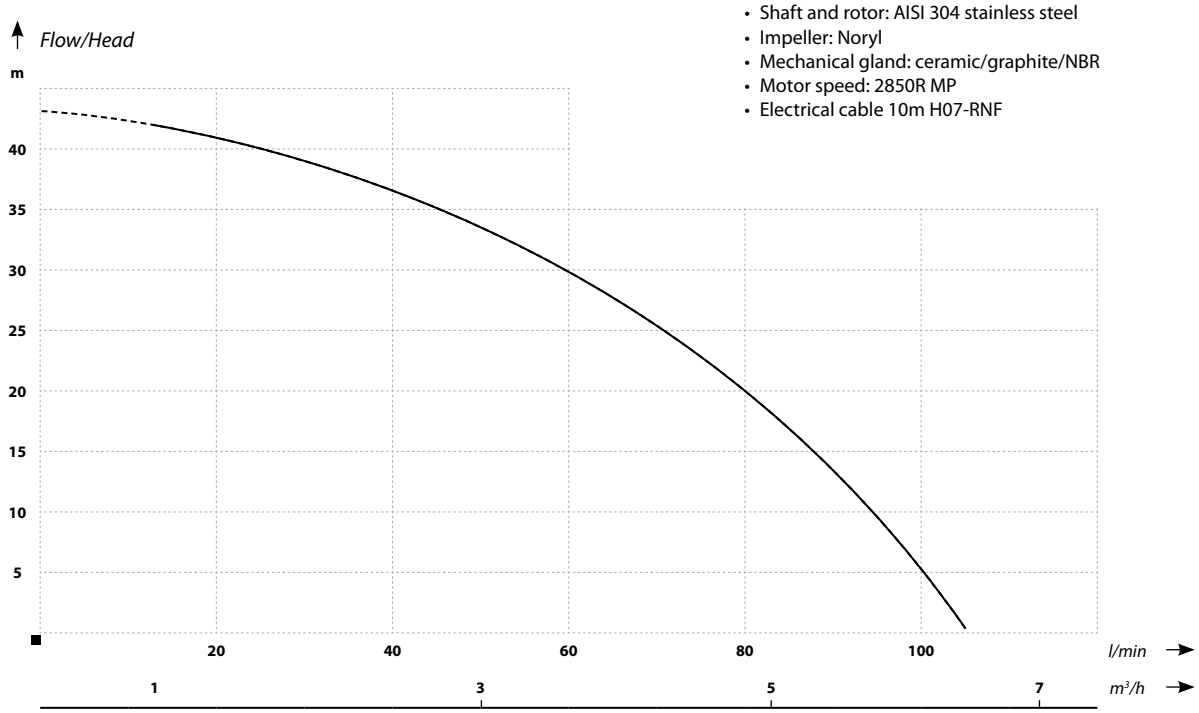
Multi IP 1200 AUTO
A range of high-pressure pumps for watering, featuring a built-in automation for controlling the pump operation. The pump starts when the valve or tap is opened, and when the valve or tap is closed the pump goes to the standby mode, keeping the constant pressure in the system. The pumps feature a cooling jacket so they do not have to be totally submersed. There is a filtering sieve in the base, so the pump can remove water to the level of 5 cm. All pumps have thermal protection in the motor winding.

Multi IP 1200 RAIN
A range of high-pressure pumps for watering, similar to Multi IP 1200 AUTO, but with a different water intake system. Instead of the filtering mesh, the pumps feature 1" suction port to which the hose with a check valve is connected. The advantage of this solution is the pump protection in case of settling of impurities on the tank bottom, because the pump does not suck water from the tank bottom but through a 1-m long hose. The RAIN pumps have thermal protection in the motor winding.

APPLICATION:
In rainwater tanks for watering gardens. Water supply to homes from wells and garden watering systems. The pumps can be used in ornamental ponds and for taking water from springs in which the water level is near the surface.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Insulation class B
- Operation mode – continuous
- Degree of protection - IP68

MATERIALS:
- Motor housing: AISI 304 stainless steel
- Shaft and rotor: AISI 304 stainless steel
- Impeller: Noryl
- Mechanical gland: ceramic/graphite/NBR
- Motor speed: 2850R MP
- Electrical cable 10m H07-RNF



PARAMETERS

Model	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Passage through Impeller (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)

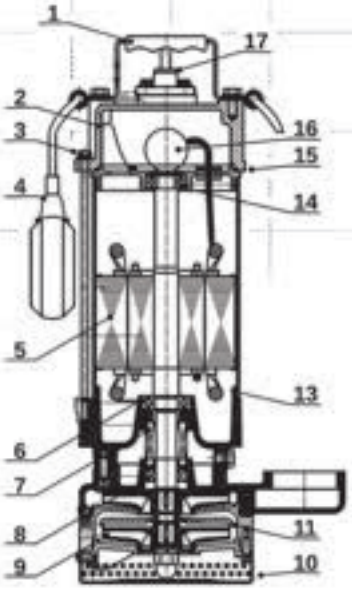
H-SWQ

H-SWQ 1500

H-SWQ 2200

H-SWQ 1800



H-SWQ 1800

High-pressure submersible pumps for pumping clean and slightly polluted water containing no abrasive particles (e.g. sand). Due to their high lifting height, they are used in agriculture for irrigation and drainage, domestic and agricultural water supply from wells, lakes and rivers. They can also be used for draining flooded rooms, garages and premises.

FEATURES:

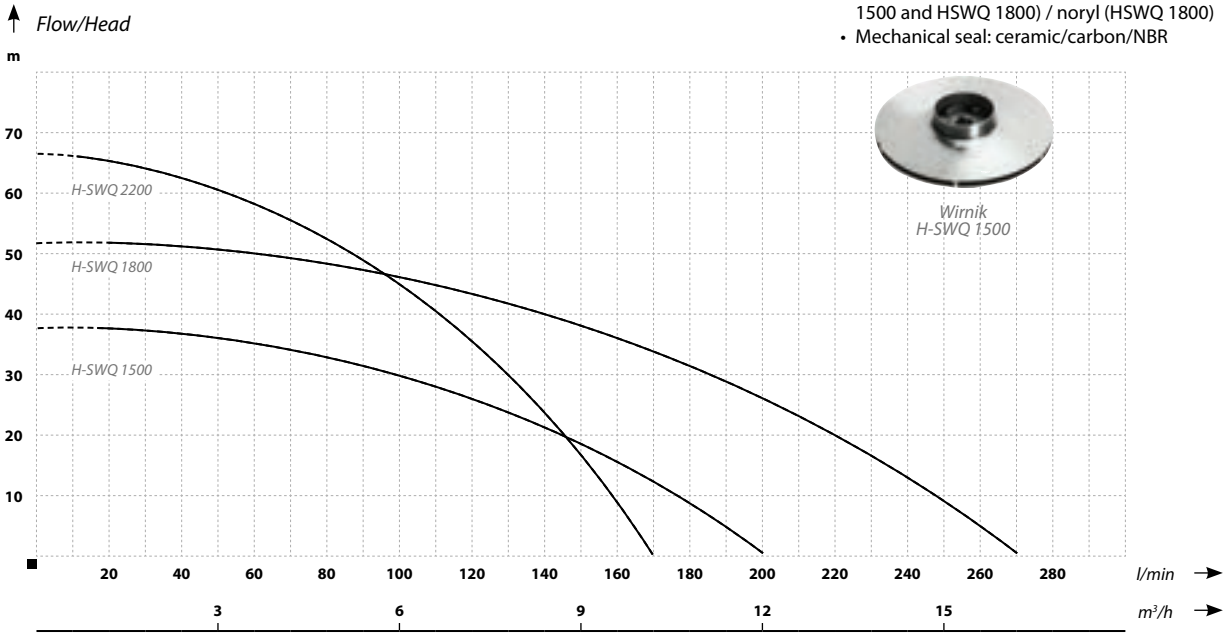
- Produce high water pressure, needed for watering
- With a float switch controlling the pump operation and protecting it against running dry
- The design incorporates a cooling jacket so that the pumps do not have to be completely submerged
- 8 m power cable with plug
- Thermal protection built into the motor winding
- Warranty 24 months
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 35ºC
- Maximum ambient temperature: 40ºC
- Power supply: 230 V
- Insulation class: B (F - HSWQ 1800)
- Operating mode: continuous
- Safety: IP68
- Power supply cable length: 8 m
- Working position: vertical
- Motor speed: 2850 RPM

MATERIAL:

- Motor housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304 (HSWQ 1500 and HSWQ 1800) / noryl (HSWQ 1800)
- Mechanical seal: ceramic/carbon/NBR



Wirnik
H-SWQ 1500

PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)

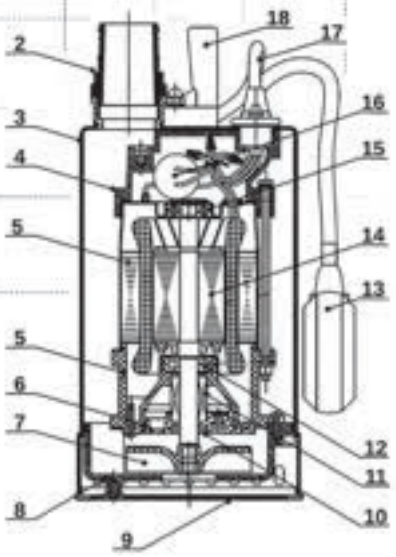
SWQ / F-SWQ

SWQ

F-SWQ



Submersible pumps designed for pumping clean and slightly contaminated water. Due to the top quality stainless steel design, the pumps ensure long-term and reliable operation. The motor is equipped with thermal protection mounted in the winding. The pumps have a cooling jacket so that they do not have to be fully submerged. Compared to other SWQ pumps, the F marked pump provides a very high flow of up to 830 l/min. All pumps except the SWQ180 have impellers made of stainless steel and are equipped with float switches for operation control. Due to small size (12 cm diameter), the SWQ180 pumps can be used to extract water from small, narrow wells. The pumps do not have a float.

APPLICATION:
Pumping rainwater and surface water from ponds, lakes and rivers, supply of water to waterholes. Draining flooded rooms, houses, garages and premises, management of fish farms.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 4-10

MATERIALS:
- Motor housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Mechanical seal: ceramics/carbon/NBR
- Rotational speed of the electric motor: 2850RMP

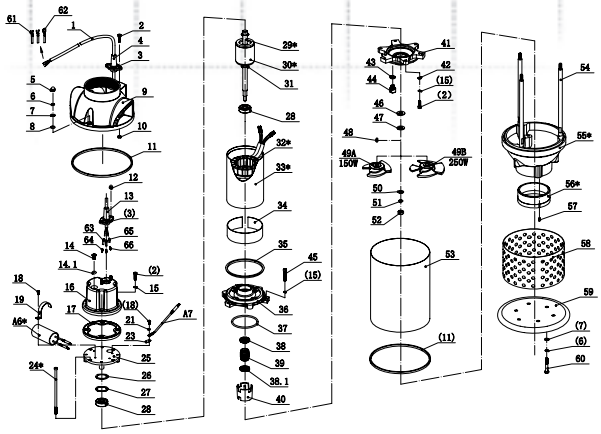
75-FAXIAL-0,25 INOX



75-FAXIAL-0,25 series pumps are designed for pumping clean cold water.
Due to their high performance, they can be applied in aeration of fishing ponds and in irrigation for transporting large volumes of water.

FEATURES:

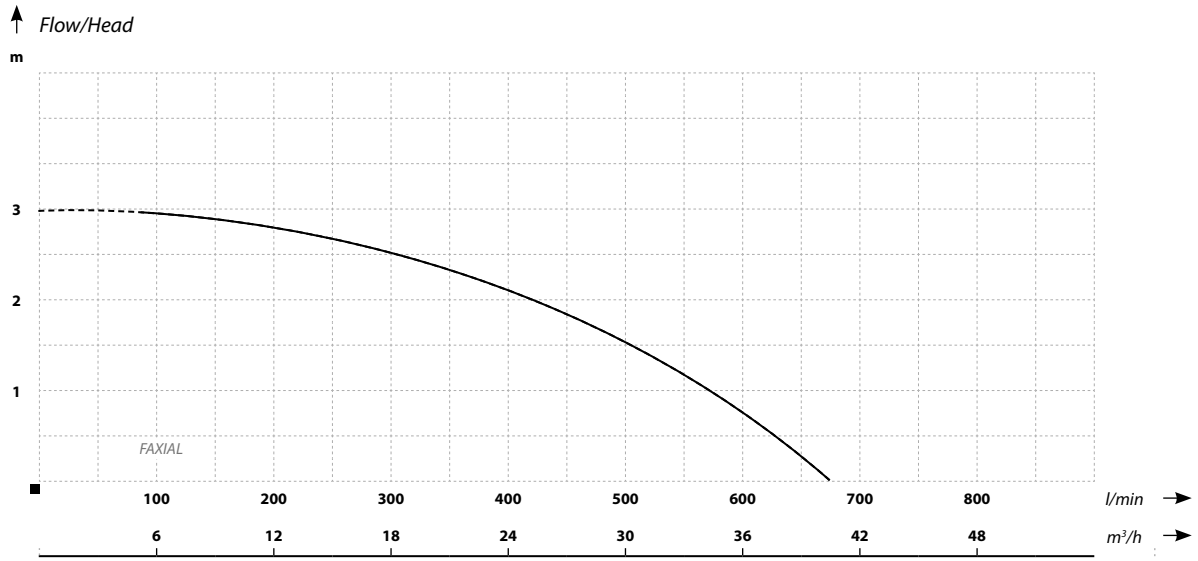
- High efficiency
- High performance with low current consumption
- Compact dimensions
- Top quality materials
- Thermal protection built into the motor winding
- 24 months warranty
- Warranty and post-warranty service

TECHNICAL SPECIFICATIONS:

- Maximum liquid temperature: 35ºC
- Maximum ambient temperature: 40ºC
- Power supply: 230V
- Insulation class: B
- Operating mode: continuous
- Safety: IP68
- Power cable length: 8 m terminated with a plug
- Working position: vertical
- Motor speed: 2850 RMP

MATERIALS:

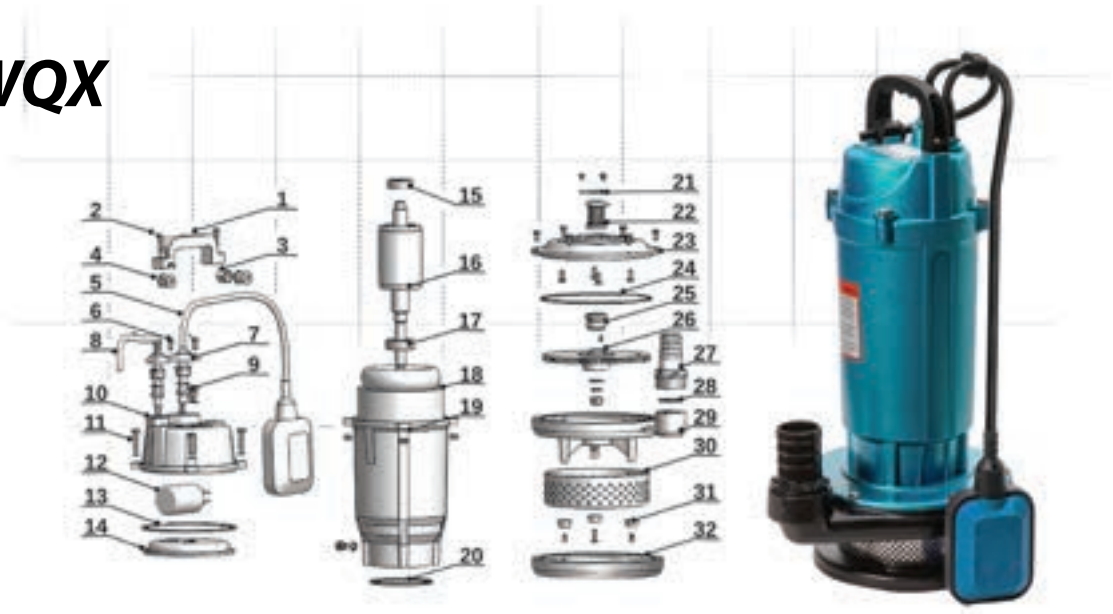
- Motor housing: AISI 316 stainless steel
- Rotor housing: AISI 316 stainless steel
- Rotor: AISI 316
- Shaft and rotor: AISI 316 stainless steel
- Mechanical gland: Double: ceramics/carbon/NBR (ITALY)



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
FAXIAL	3,3	670	250	230	2,3	3"	19,4/42	11,2

WQX

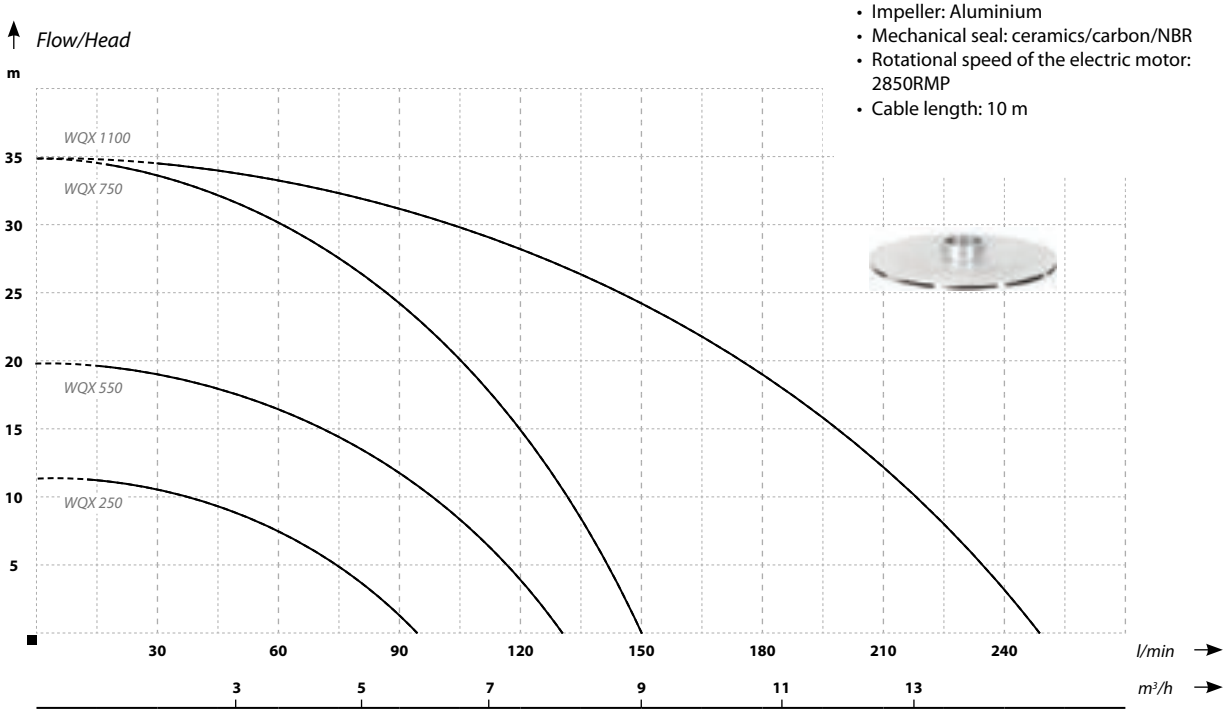


Submersible pumps designed for pumping clean and slightly contaminated water. The motor housing is made of aluminium and the motor is equipped with thermal protection mounted in the winding. High pressure is a special feature of the WQX series pumps. Pump operation is controlled by a float switch. The WQX 250 are available with and without the float switch.

APPLICATION:
Pumping rainwater and surface water from ponds, lakes and rivers, supply of water to waterholes. Draining flooded rooms, houses, garages and premises.

OPERATING CONDITIONS:
- Maximum liquid temperature 30°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5-8

MATERIALS:
- Motor housing: Aluminium
- Shaft and rotor: stainless steel AISI 304
- Impeller: Aluminium
- Mechanical seal: ceramics/carbon/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
WQX 250	12	100	250	230	3	2	1	19/38	6

WQX 1100	35	250	1100	230	3	6,4	1½	26/45	13

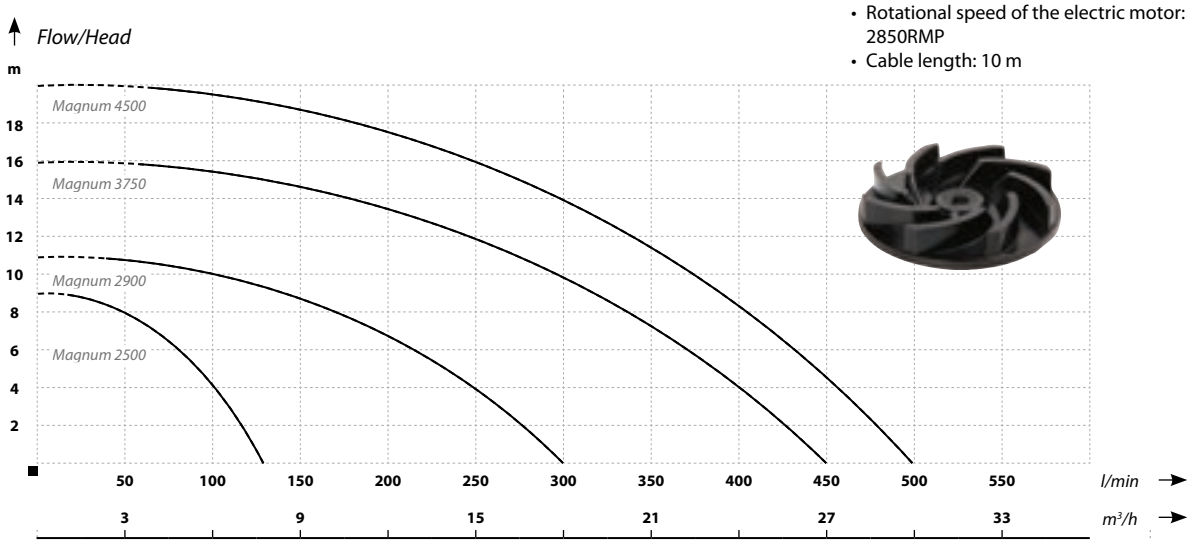
MAGNUM

Submersible pumps designed for pumping sewage and water from flooded premises. The pump is available with a float switch for automatic operation control or without the float switch. Threaded outlet connection and a set of adapters provide connection of the discharge hose with a hose clamp or fast-connection coupling. Magnum pumps are equipped with thermal protection mounted in the motor winding. The motor housing is made of aluminium and the impeller is made of cast iron. Magnum 2500 and 2900 pumps are available with and without the float switch.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5-8

MATERIALS:
- Motor housing: Aluminium
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
Magnum 2500	9	135	250	230	30	3,0	1½	23/36	6
Magnum 2900	11	300	550	230	35	4,2	2	26/40	12

Magnum 4500	20	500	1500	230	40	10	2	26/47	18

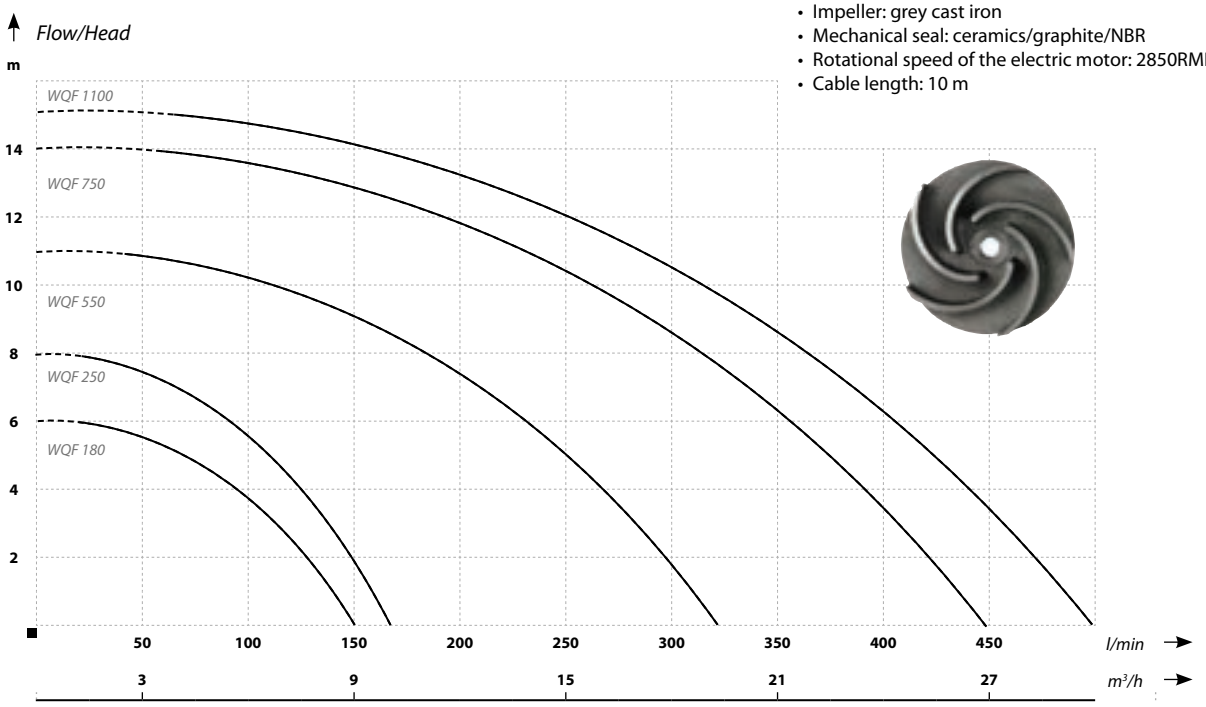
WQF

Submersible pumps designed for pumping sewage, dirty water, and water from flooded premises. The pumps are equipped with float switches for automatic pump control. Threaded outlet connection and a set of adapters provide connection of the discharge hose with a hose clamp or fast-connection coupling. WQF pumps are equipped with thermal protection mounted in the motor winding. The motor housing is made of AISI304 stainless steel, and the impeller is made of grey cast iron.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5-9

MATERIALS:
- Motor housing: stainless steel AISI 304
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)

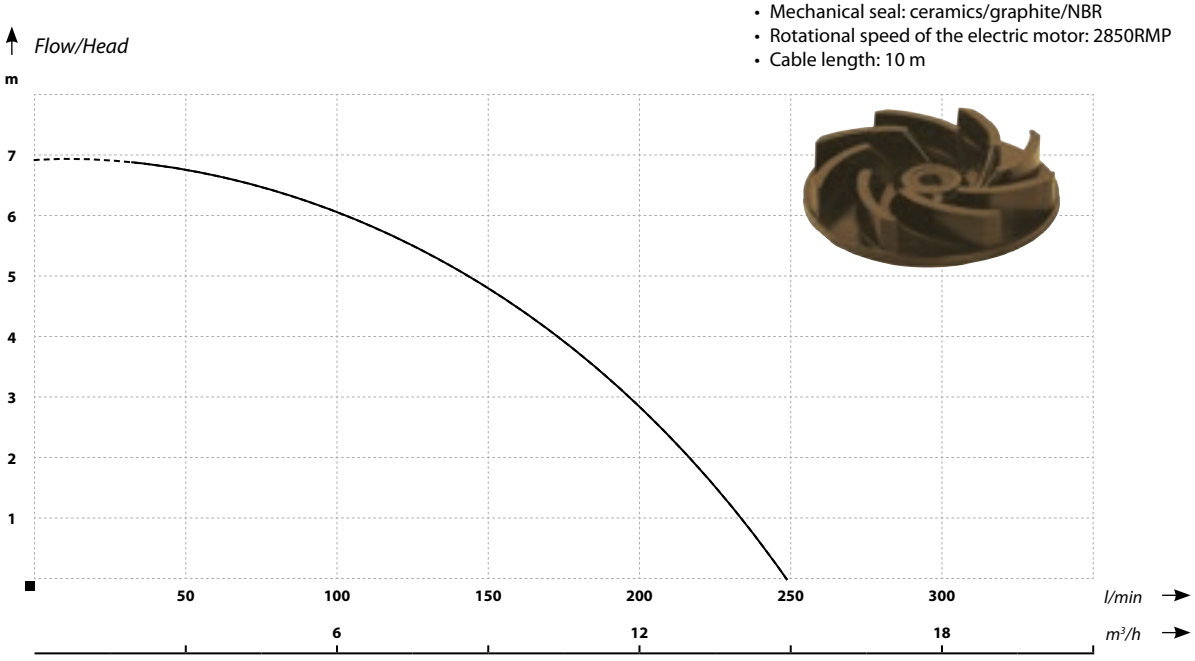
SN-450

Submersible pumps designed for pumping sewage, dirty water, and water from flooded premises. SN-450 pump is made of cast iron with VORTEX-type impeller. It can pump water with mechanical impurities with particle diameter of up to 20 mm. The pump is equipped with a vertical float switch for easy automatic operation in 25 cm diameter wells. SN-450 pump is equipped with thermal protection mounted in the motor winding.

APPLICATION:
Pumping sewage from domestic septic tanks, draining flooded rooms, houses, garages and premises and pumping water from narrow well and canals. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5-8

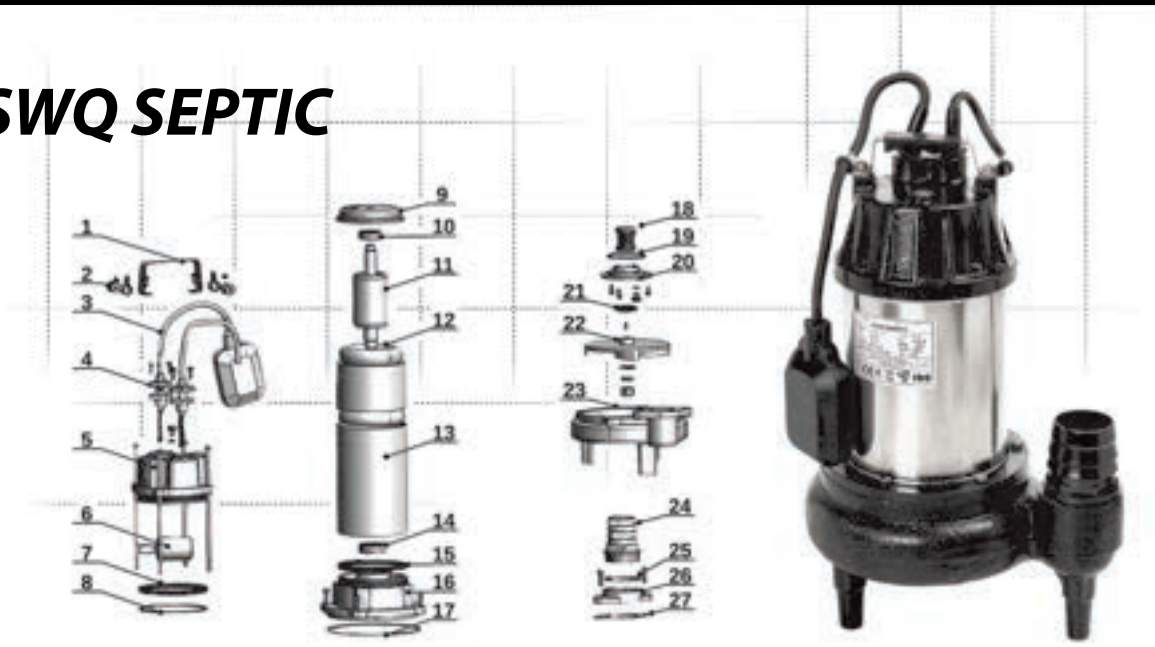
MATERIALS:
- Motor housing: grey cast iron
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
SN-450	7	250	450	230	20	2,5	2	23/40	11,5

SWQ SEPTIC

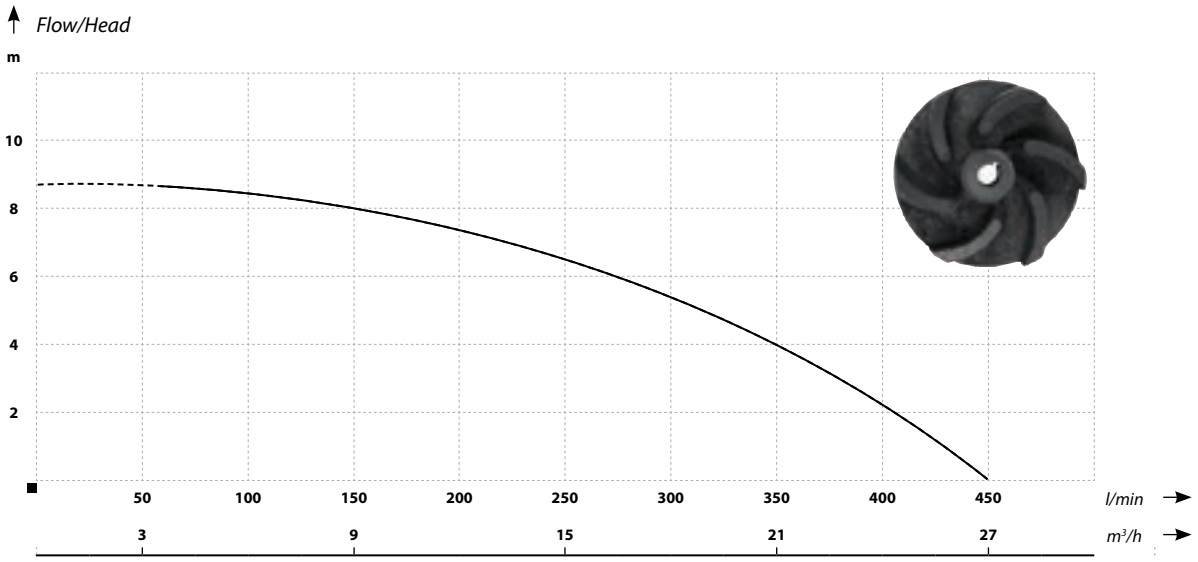


Submersible pump with a 40mm passage Vortex impeller for pumping sewage, dirty water and water from flooded rooms. SWQ SEPTIC pumps are made of stainless steel and cast iron in order to withstand the adverse sewage environment. Pump outlet connection provides connection of the discharge hose with a hose clamp or fast-connection coupling. These pumps are widely used in agriculture. The SWQ SEPTIC pump is equipped with thermal protection mounted in the motor winding and a float switch for operation control.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 4-10

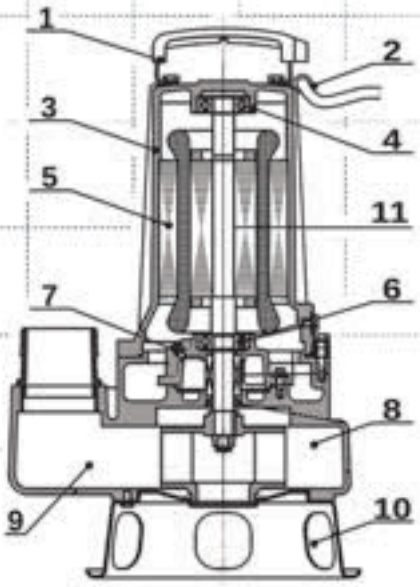
MATERIALS:
- Motor housing: stainless steel AISI 304
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
SWQ SEPTIC	9	450	1100	230	40	7,7	2	30/48	25

BIG

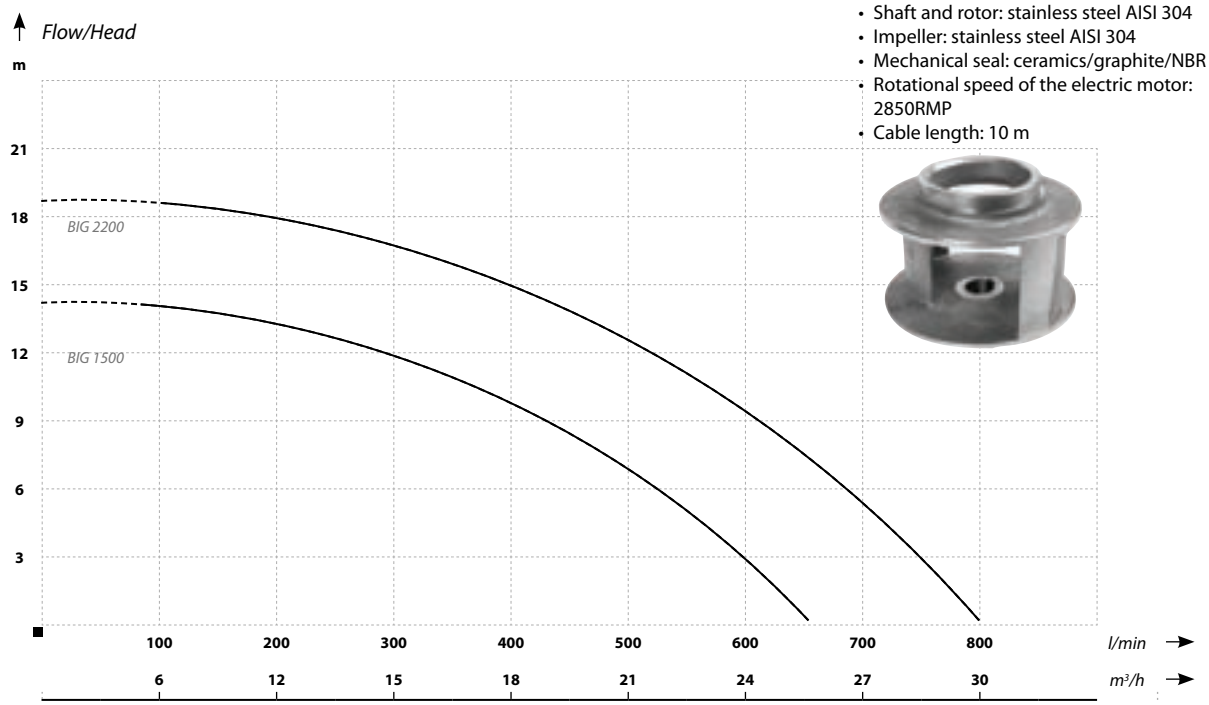


Professional submersible sewage pumps with two-channel impeller. The BIG 1500 pump is available as 230 V ~/50 Hz version, BIG 2200 - as 400 V ~ 3 / 50 Hz. The impeller design reduces the risk of its clogging and ensures pumping of medium containing solids with maximum particle diameter of 50 mm. The BIG 1500 pump is equipped with a float switch for operation control. Single-phase pumps are supplied with thermal protection mounted in the motor winding. Due to the high quality materials used and the durable design, the pumps can be used in industrial applications.

APPLICATION:
Pumping rainwater and surface water. Draining sewage in buildings, retail facilities and manufacturing plants, in industrial cooling or process water systems. Used in agriculture for draining and irrigation.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IPX8
- Water PH: 5-9
- Liquid density: 1.2x10^3kg/m^3

MATERIALS:
- Motor housing: grey cast iron
- Body: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

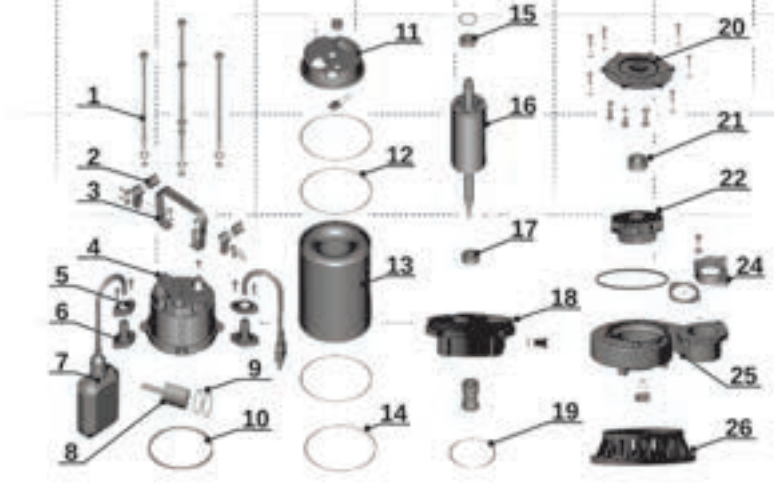
SWQ PRO

FLOOD PUMP

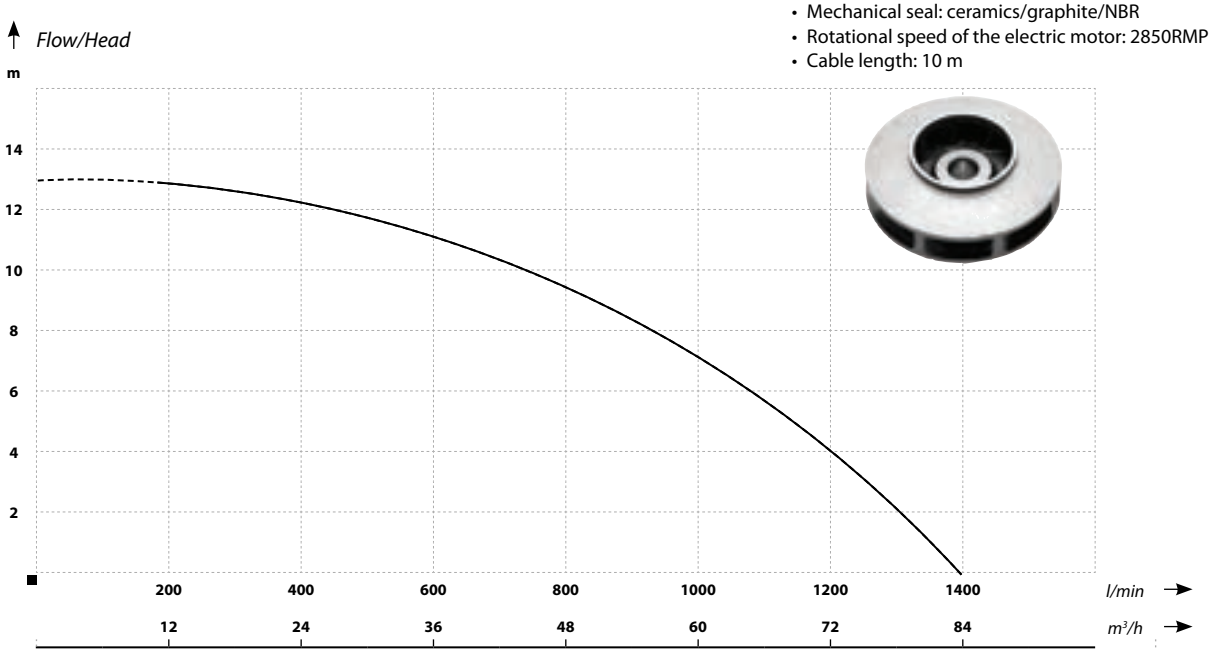


FLOOD PUMP
Professional submersible pump compliant with the most demanding European standards, intended for customers using drainage pumps in their professional work. Due to the use of a closed impeller, the pump can pump clean and slightly contaminated water.
With its 1500 W motor, 3-inch outlet, and maximum flow of up to 1400l/min, as well as a relatively low weight, the pump can be used to drain flooded houses, premises and garages during minor and major flooding. The pump is equipped with a float switch for operation control and thermal protection mounted in the motor winding.

APPLICATION:
Pumping rainwater and surface water. Drainage of flooded households, agriculture farms, premises and garages. Pumping cooling or process water in industrial systems. Used in agriculture for draining and irrigation. The pump can be used in fish farms.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5-9
- Liquid density: 1.2x10^3kg/m^3

MATERIALS:
- Motor housing: stainless steel AISI 304
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

WQ PRO

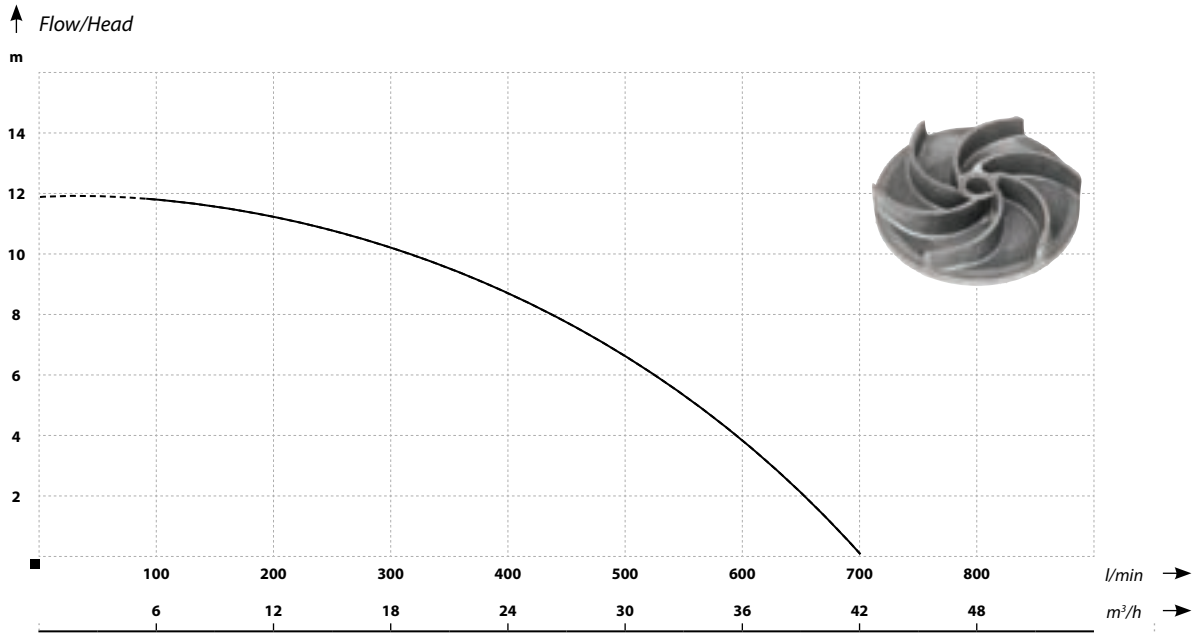
CONSTRUCTION PUMP

Submersible pump with a 40mm passage Vortex impeller for pumping sewage, dirty water and water from flooded rooms. The pump is compliant with the most demanding European standards, therefore it is intended for customers using such products in their professional work. WQ PRO pumps are made of cast iron in order to withstand the adverse sewage environment. Pump outlet connection provides connection of the discharge hose with a hose clamp or fast-connection coupling. These pumps are widely used in agriculture. The WQ PRO pump is equipped with thermal protection mounted in the motor winding and a float switch for operation control. The WQ 1500 PRO pump is mainly intended for customers in the civil engineering industry, where the top quality and high performance is required. It can also be used in industrial applications.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5-9

MATERIALS:
- Motor housing: stainless steel AISI 304
- Body: alloy
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
WQ 1500 PRO	12	700	1500	230	5	7,8	3	32/50	27

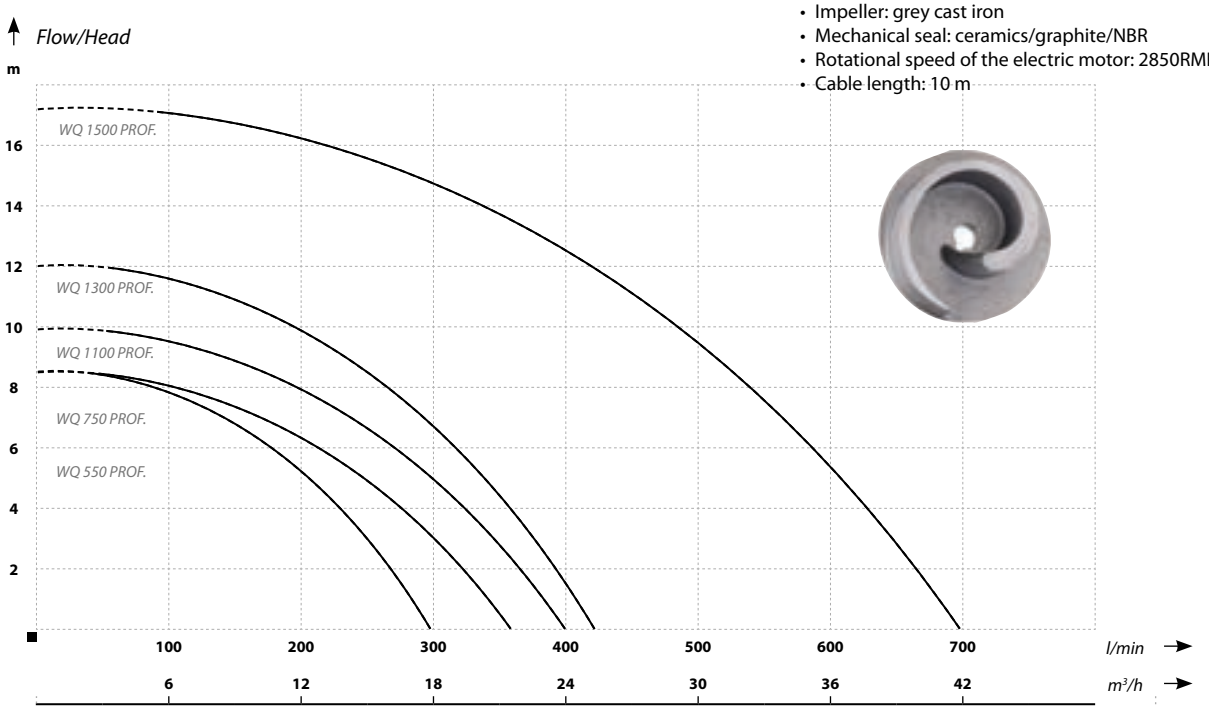
WQ PROFESSIONAL

Professional submersible pumps intended for customers who need strong and durable product in their professional work. Due to the top quality materials used, such as stainless steel and cast iron, and very high performance, WQ PROFESSIONAL pumps can operate in demanding conditions and withstand the adverse sewage environment. The pumps are widely used in sewage pumping stations. All pumps feature a factory-mounted float switch for operation control and thermal protection mounted in the motor winding. Additionally, the WQ Professional 1500 pump is equipped with a cutting impeller with 50 mm passage. Discharge hose can be connected to the pump outlet with a hose clamp or fast-connection coupling.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Sewage treatment plants. Occasional renovation works. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 4-10
- Liquid density: 1.2x10^3kg/m^3

MATERIALS:
- Motor housing: stainless steel AISI 304
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m



PARAMETERS

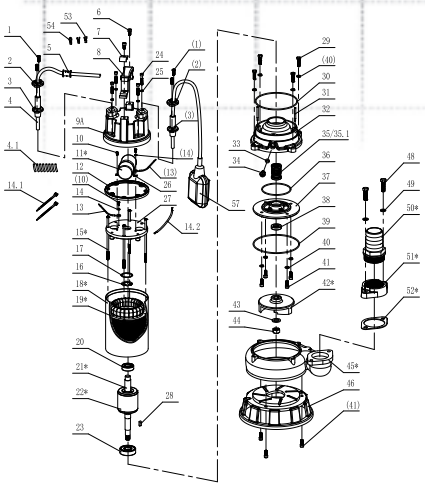
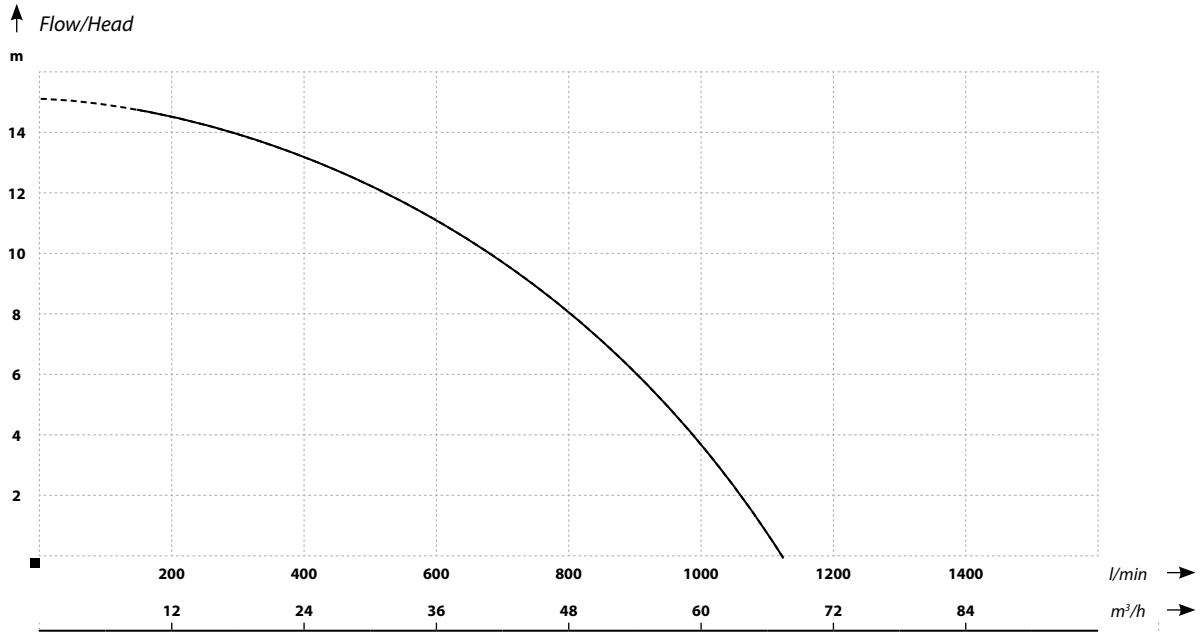
75-FWQ-1,5 INOX



75-FWQ-1,5 pumps are designed for pumping sewage, dirty water and water from flooded rooms. The pumps are used to pump sewage from domestic sump pits and to drain flooded rooms, houses, garages and premises. They are also used in pumping rainwater and surface water from ponds, lakes and rivers, and for feeding ponds.

CHARACTERISTICS:

- High efficiency with low motor power
- Rotor blades allow for breaking up the pumped elements
- Threaded discharge port for easy connection of discharge hose using a hose clamp or quick release coupling
- Top quality materials
- Thermal protection built into the motor winding
- 24 months warranty
- Warranty and post-warranty service



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (cm)	Weight (kg)
75 FWQ 1,5	15	1170	1500	230	15	8	3	52/32	26,5

WQ-65-1,5

Professional submersible pumps for pumping domestic sewage and for draining flooded rooms. To ensure trouble-free operation, the pumps are equipped with overload protection mounted in the motor winding. If there is a risk of overloading the motor, the protection will switch off the pump. The construction made of cast iron, alloy and stainless steel makes the pumps resistant to mechanical damage and chemical corrosion. The pump impeller has a single-channel design, resulting in high efficiency. The pumps are fitted with a threaded discharge port which allows the discharge hose to be connected by means of a hose clamp or quick coupling.

The pumps are used for pumping sewage from domestic and agricultural septic tanks and for draining flooded premises, houses, garages and apartments. Pumping rainwater and surface water from ponds, lakes and rivers, feeding ponds. Domestic wastewater treatment plants.

FEATURES:

- Top quality materials
- 24 months warranty
- Warranty and aftermarket service

50-KBFU-0,40 INOX
50-KBFU-0,75 INOX

KBFU series submersible pumps are designed for professional draining works and for applications where there is a risk that pumped water contains sand or sludge. The pumps are intended for removal of water from flooded rooms, houses, garages and premises, and construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries.

CHARACTERISTICS:

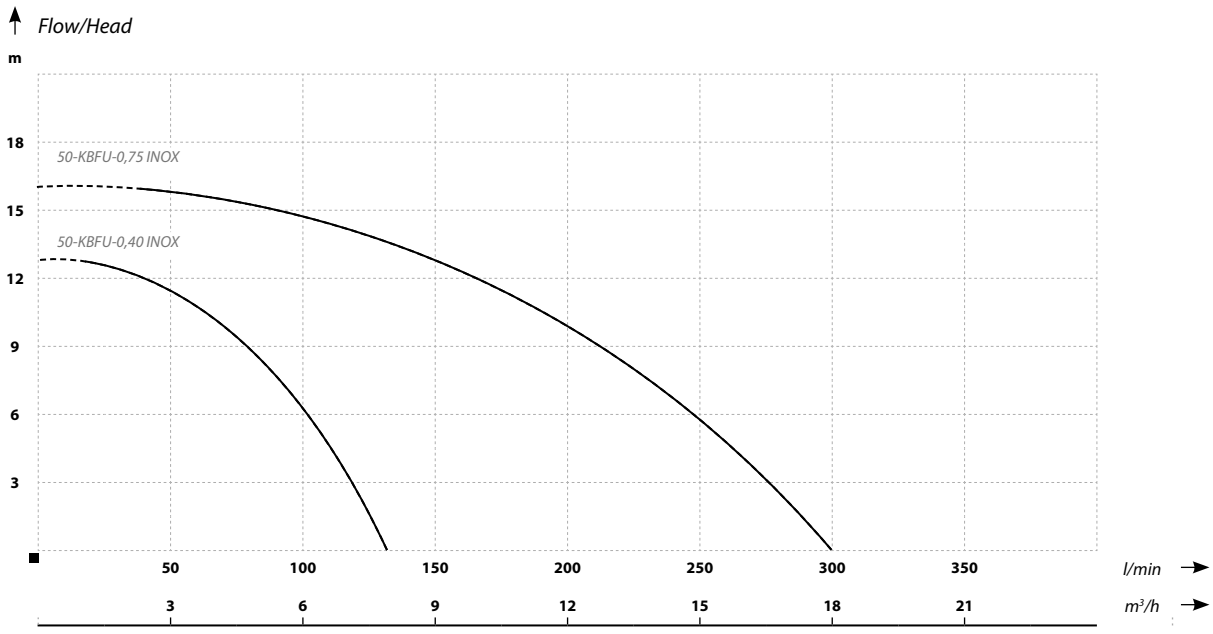
- Suitable for pumping water with sand
- Capable of pumping water to a low level of 5 mm
- Column float switch (50-KBFU-0.75 INOX)
- Top quality materials
- Threaded discharge port for easy connection of discharge hose using a hose clamp or quick release coupling
- 8m power cable with a plug
- Thermal protection built into the motor winding
- 24 months warranty
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 40°C
- Maximum ambient temperature: 40°C
- Power supply: 230V
- Insulation class: B
- Operating mode: continuous
- Protection class: IP68
- Length of power supply cable: 8m with a plug
- Working position: vertical
- Motor speed: 2850 RPM

MATERIALS:

- Motor housing: AISI 316 stainless steel
- Impeller housing: Grey cast iron
- Shaft and rotor: AISI 316 stainless steel
- Impeller: Steel / glass fibre reinforced PA
- Mechanical seal: Double: ceramic/carbon/NBR (ITALY)
- Dimensions 40cmx24cm
- weight 12.4 kg
- port 2"



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Impeller passage (mm)	Amperage (A)	Inlet/outlet (inch)	Dimensions (cm)	Weight (kg)

25-KBFU-0,45 50-KBFU-0,45

KBFU submersible pumps are designed for professional drainage works and everywhere where there is a risk that pumped water contains sand or sludge. The pumps are used for draining flooded rooms, houses, garages, apartments or construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries.

FEATURES:

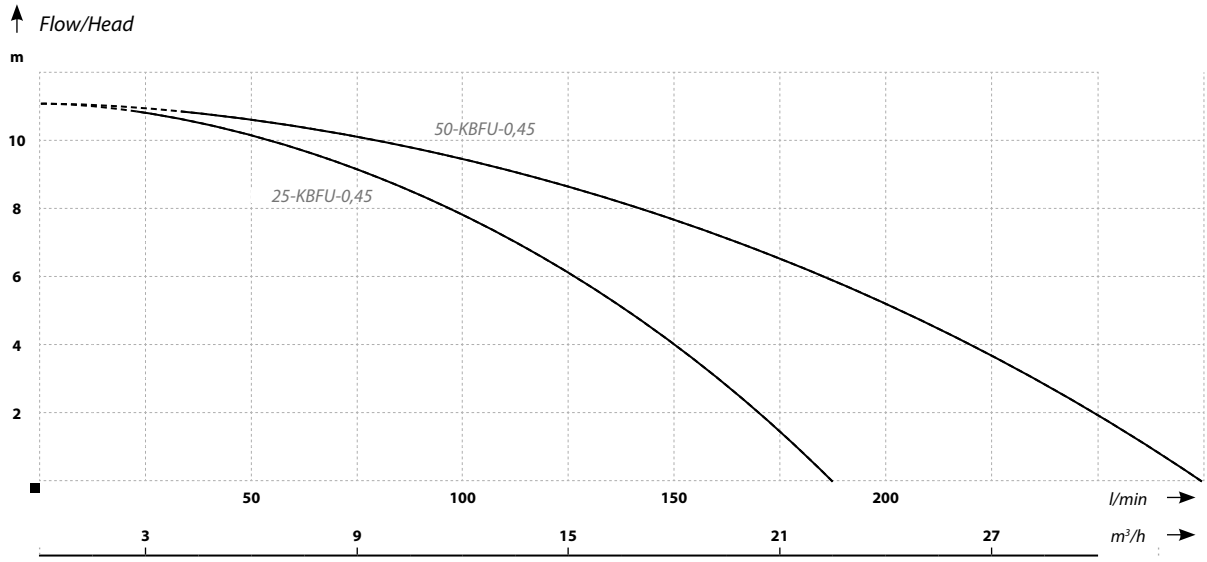
- Suitable for pumping water with sand
- Post float switch (50-KBFU-0,45)
- Capable of pumping water to a low level of 3 mm (25-KBFU-0.45)
- Top quality materials
- Thermal protection built into the motor winding
- The pump motors are from the Japanese company NSK
- 24 months warranty
- Warranty and aftermarket service

TECHNICAL DATA:

- Maximum liquid temperature: 40°C
- Maximum ambient temperature: 40°C
- Power supply: 230 V
- Insulation class: F
- Operating mode: continuous
- Safety: IP68
- Length of power cable: 10m
- Motor speed: 2850 RPM
- Water PH: 5-9
- Liquid density: 1.2x10^3kg/m^3
-

MATERIALS:

- Motor housing: stainless steel AISI 304
- Impeller housing: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron with heavy wear coating / chromium alloy
- Mechanical gland: Sic-Sic / Carbon-Sic
- Bearings: NSK



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (kW)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Weight (kg)
25-KBFU-0,45	15	750	1,5	400	3,5	3	37

50-KBFU-0,80

The small submersible pumps of the KBFU series are suitable wherever there is a risk that the pumped water contains sand or sludge. The pumps are used for draining flooded rooms, houses, garages or apartments. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering.

FEATURES:

- Suitable for pumping water with sand
- Top quality materials
- Double thermal protection embedded in the motor winding
- The discharge spigot can be mounted either vertically or horizontally
- 24 months warranty
- Warranty and aftermarket service

TECHNICAL DATA:

- Maximum liquid temperature: 40ºC
- Maximum ambient temperature: 40ºC
- Power supply: 230 V
- Insulation class: F
- Operating mode: continuous
- Safety: IP68
- Length of power cable: 10m
- Motor speed: 2850 RPM
- Water PH: 6.5-8.5
- Liquid density: 1.2x10^3kg/m^3
- Maximum draught 7 m

MATERIALS:

- Motor housing: aluminium alloy
- Body: aluminium alloy
- Shaft and rotor: stainless steel AISI 420SS
- Impeller: ASI201SS stainless steel with heavy wear coating (TPU)
- Bearings: NSK
- Mechanical gland: Ceramic-Sic / Carbon-Ceramic

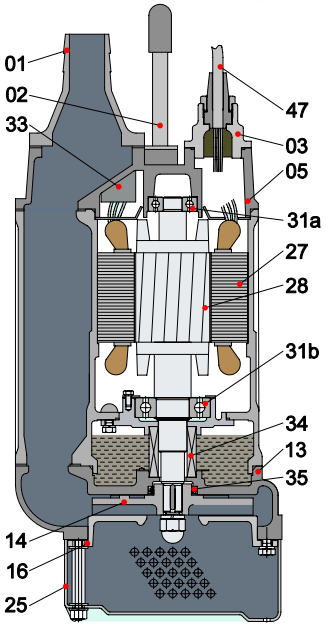
KBFU

KBFU submersible pumps are designed for professional drainage works and everywhere where there is a risk that the pumped water a lot of sand or sludge. The pumps are used for draining flooded rooms, houses, garages, apartments or construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries.

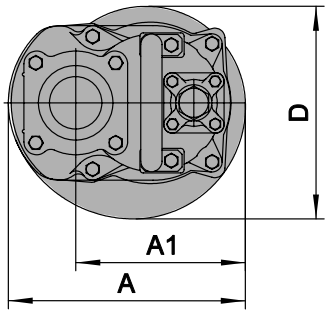


FEATURES:

- Suitable for pumping water with sand
- The design incorporates a cooling jacket so that the pumps do not have to be completely submerged
- Top quality materials
- Pumping of medium up to 3 mm (25 KBFU 0.45)
- Threaded discharge port for easy connection of the discharge hose with a hose clamp or quick coupling
- Float switch for pump control and protection against dry running (50 KBFU 0.45)
- 8 m power cable with plug
- Thermal protection built into the motor winding
- 24 months warranty
- Warranty and aftermarket service

TECHNICAL DATA:

- Maximum liquid temperature: 35ºC
- Maximum ambient temperature: 40ºC
- Power supply: 230 V
- Insulation class: F
- Operating mode: continuous
- Safety: IP68
- Length of power cable: 10 m
- Working position: vertical
- Motor speed: 2850 RPM



MATERIALS:

- Motor housing: grey cast iron alloy
- Impeller: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron with heavy wear coating / chromium alloy
- Mechanical gland: ≤ 2.2 kW: Sic-Sic /
- Carbon-Sic; ≥ 3.7 kW: Sic-Sic / Sic-Sic
- Bearings: NSK

80-KBFU-4,0-4P

KBFU-4P series submersible pumps are designed for heavier dewatering work in mines, quarries and construction.
Characterised by a durable and robust design, the 4P series pump motors feature 4 poles, effecting in significant extension of the life of the equipment in relation to its 2-pole counterparts. In addition, the rotor and the external agitator are made of chrome alloy, enabling operation under severe conditions. Thanks to the casing in the form of a cooling jacket, they can operate only partially submerged.

The pumps are used for draining flooded areas, pumping raw sewage, dewatering construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries. Where there is a risk of bentonite or a significant sand content in the pumped water.

FEATURES:
- Suitable for pumping water with sand
- Top quality materials
- Double thermal protection embedded in the motor winding
- 24 months warranty
- Warranty and aftermarket service

MATERIALS:
- Motor housing: grey cast iron alloy
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 420SS
- Impeller: grey cast iron/chromium alloy
- Agitator: grey cast iron/chromium alloy
- Bearings: NSK
- Mechanical gland: Sic-Sic / Sic-Sic

TECHNICAL DATA:
- Maximum liquid temperature: 40ºC
- Maximum ambient temperature: 40ºC
- Power supply: 400V
- Insulation class: F
- Operating mode: continuous
- Safety: IP68
- Length of power cable: 10m
- Motor speed: 1450RMP
- Motor type: 4-pole
- Water PH: 5–9
- Liquid density: 1.2x10^3kg/m^3
- Maximum draught 7 m

7 IBX

IBX series submersible pumps are designed for pumping water contaminated by abrasive materials such as sand and silt, while maintaining a compact design. Mainly used in single-family construction for trench dewatering. Thanks to the casing in the form of a cooling jacket they can operate only partially submerged. A double mechanical gland resistant to high pressure is used to ensure guaranteed tightness.
Semi-open impeller made of high chromium alloy with wear plate (ductile iron) provides excellent durability. The pumps feature thermal protection installed in the winding.

For draining flooded rooms, houses, garages or apartments. Watering. Drainage of construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Anywhere where there is a risk of significant sand and sludge content in the pumped water.

Name	Dimensions (mm)			
	d	B	H	W1

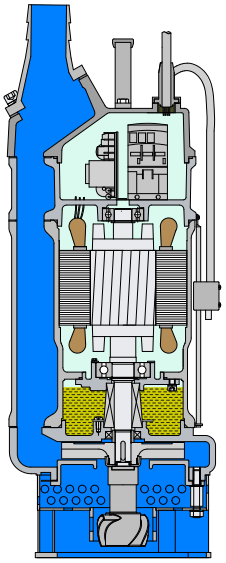
KBFU-AUTO

Submersible pumps of the KBFU-AUTO series are designed for professional dewatering works, based on the KBFU series. Mainly used in the construction industry for drainage of excavations. In contrast to the KBFU series, the pumps are equipped with a control unit and an external agitator to increase the life of the pumps in more severe conditions. The pumps are characterised by their durable and robust construction. Thanks to the automatic control, the pumps require virtually no manual operation and additionally have a number of safety features. Thanks to the cooling jacket enclosure they can operate only partially submerged. A double mechanical gland is used to ensure guaranteed tightness.
The pumps are used for the drainage of flooded rooms, garages and premises. Pumping of rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries.
Wherever there is a risk of bentonite or significant sand and sludge content in the pumped water.



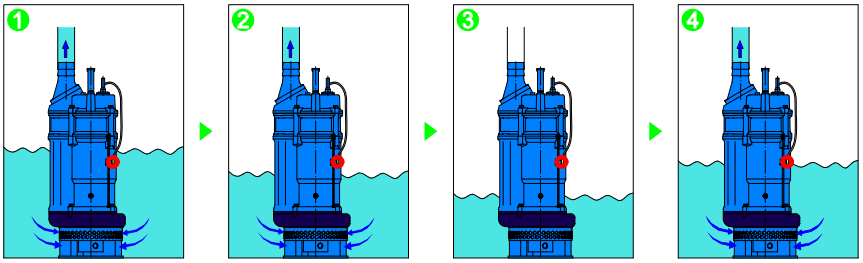
FEATURES:
- Suitable for pumping water with sand
- Top quality materials
- Thermal protection built into the motor winding
- Warranty 24 months
- Warranty and post-warranty service

TECHNICAL DATA:
- Maximum liquid temperature: 40°C
- Maximum ambient temperature: 40°C
- Thermal protection: 230V - yes / 400V no
- Insulation class: F
- Operating mode: continuous
- Safety: IP68
- Power supply cable length: 8 m
- Motor speed: 2850 RMP
- Liquid density: 1.2x10^3kg/m^3
- Maximum submersion 7 m

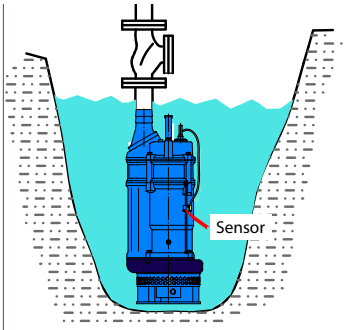
MATERIAL:
- Motor housing: alloy/grey cast iron
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron with heavy wear coating/chromium alloy
- Bearings: NSK
- Mechanical gland:
  ≤ 2.2 kW: Sic-Sic / Carbon-Sic
  ≥ 3.7 kW: Sic-Sic / Sic-Sic

CONTROL MODULE - FUNCTIONS:
- Phase reversal protection to ensure correct rotation of the rotor;
- Automatic pump stop in the event of overload (e.g. by blocked rotor) and incorrect voltage: after an emergency stop of the pump, a starting test is carried out within 5 minutes.
- Overheating protection: if the temperature is too high, the pump switches off and automatically restarts after cooling down.
- Adjustable fluid sensor level.

Automatic control



1. The pump runs as long as the sensor is submerged
2. Within 1 minute of the fluid sensor being exposed, the pump will shut down
3. The pump remains off until the sensor is re-submerged
4. When the sensor is submerged, the pump will start automatically



If the inflow of water is small, it is recommended to install a non-return valve (so that the pump does not start too often) and move the sensor upwards

CUTTER

A series of submersible pumps with cutting system designed for pumping domestic sewage. In case of flooding, they can be used for draining rooms. The robust construction of the pump made of durable cast iron, the cutting system with a cutting knife and very reasonable price have made the pumps very popular among individual customers. The pumps are equipped with a float switch for automatic operation. To ensure reliable operation, the pumps are equipped with overload protection mounted on the cable. Pump outlet provides connection of the discharge hose with a hose clamp or fast-connection.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5 - 9

MATERIALS:
- Motor housing: grey cast iron
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Cutting knife: grey cast iron/stainless steel AISI 304
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m

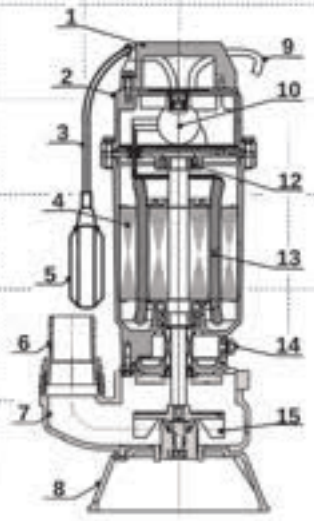
FURIATKA

CUTTER



Submersible cast iron pumps with cutting system. The pumps are designed for pumping domestic sewage and draining flooded rooms. In order to minimize the risk of clogging, the pumps are equipped with an exceptionally effective "screw" cutting system. To ensure reliable operation, the pumps have overload protection mounted on the cable. To prevent motor overloading, the protection will stop the pump. The cast iron construction makes the pumps resistant to mechanical damage and chemical corrosion. The pumps are equipped with a float switch for automatic operation control, and the pump outlet provides connection of the discharge hose with a hose clamp or fast-connection. Their robust design and exceptionally effective cutting system have made the Furiatka series one of the most popular pumps with cutting system on the market in Poland.

PUMP TEST: https://youtu.be/25uq0YBIw78

APPLICATION:
Pumping sewage from domestic and agricultural septic tanks, and draining flooded rooms, houses and garages. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes. Domestic sewage treatment plants.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5-9

MATERIALS:
- Motor housing: grey cast iron
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Cutting knife: grey cast iron/stainless steel AISI 304
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m

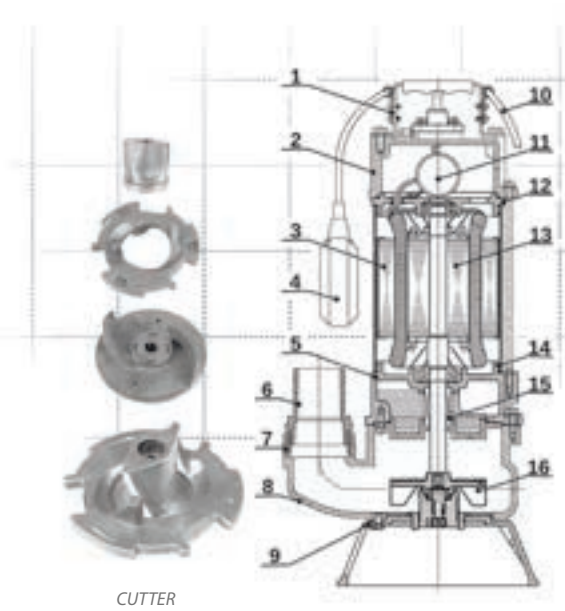
V



CUTTER

Submersible pumps with cutting system designed for pumping domestic sewage. In case of flooding, they can be used for draining rooms. Their robust design and quality materials used (stainless steel, cast iron), the cutting system with a cutting knife, and very reasonable price have made the pumps very popular among individual customers.
The pumps are equipped with a float switch for automatic operation. To ensure reliable operation, the pumps have overload protection mounted on the cable. V 550, V1500 and V2200 pumps incorporate the high efficiency "screw" cutting system. Pump outlet provides connection of the discharge hose with a hose clamp or fast-connection.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C

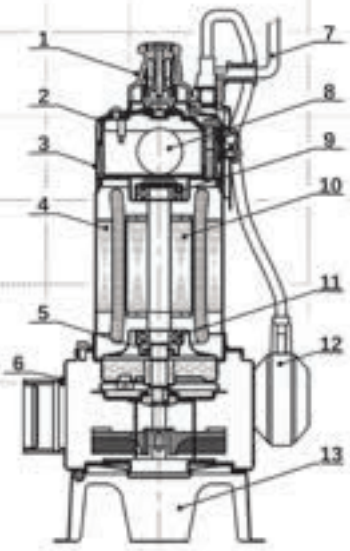
SWQ



Stainless steel submersible pumps with cutting system Designed for pumping dirty water and domestic sewage. The risk of clogging has been minimized due to open cutting system. The top quality stainless steel design ensures long-term and reliable operation of the pumps. The motor is equipped with thermal protection mounted in the winding. In addition, the pumps have a float switch for automatic operation control.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 4 - 10

Materials:
- Motor housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller/cutting system: stainless steel AISI 304
- Mechanical seal: ceramics/carbon/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m

KRAKEN

A series of professional submersible pumps with cutting system designed for customers who need a strong and reliable product in their professional work. The top quality materials used and very high performance makes KRAKEN 1800 pumps suitable for operation in harsh conditions - stainless steel and cast iron design ensures the pumps withstand the adverse sewage environment. These pumps are widely used in sewage pumping stations. Pump operation is controlled by the factory-mounted float switch. KRAKEN 1800 is equipped with a multi-channel disk cutting system in order to minimize the risk of clogging. KRAKEN 1800 DF has an exceptionally effective two-channel screw cutting system. The motors with Class F winding insulation are additionally equipped with thermal protection mounted in the winding. Both models are supplied with flanges for connecting pipes or fast-connection, and an adapter for connecting 2" discharge hose with a hose clamp. The pumps are available as single-phase 230V ~/ 50Hz versions, with a float switch, and 3-phase 400V ~ 3 / 50Hz version.

KRAKEN DF can be supplied with a guide rail system for installation in pump stations. The guide rail system is sold separately.

UP 60/80

HIGH-PRESSURE SUBMERSIBLE SEWAGE PUMP
WITH CUTTING SYSTEM

The UP60/80 pumps are equipped with a two-stage hydraulics to increase the maximum pressure. An important feature of KRAKEN 1800 is a multi-channel disk cutting system designed to minimize the risk of clogging. In addition, the outlet is threaded in order to connect a pipeline or fast connection. The pump is supplied with thermal protection mounted in the motor winding.

APPLICATION:
The pump is designed for operating in pressure sewage systems.

OPERATING CONDITIONS:
- Maximum liquid temperature 50°C (60)
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 4-10
- Liquid density: 1.2x103kg/m3

MATERIALS:
- Motor housing: stainless steel AISI 304
- Body: ASTM cast iron
- Shaft and rotor: stainless steel AISI 420
- Impeller: Stainless steel AISI 440
- Mechanical seal: SiC-SiC
- Cutting knives: Stainless steel AISI 440
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m

ZWQ

A series of professional submersible pumps with cutting system, designed for customers who need a strong and reliable product in their professional work. The top quality materials used and very high performance makes ZWQ pumps suitable for operation in harsh conditions. These pumps are widely used in sewage pumping stations. Single-phase pumps have a float switch for operation control. All pumps are equipped with a three-channel cutting system integrated with the impeller in order to minimize the risk of clogging. All ZWQ pumps are suitable for installation with a guide rail system. The motors have Class F winding insulation and single-phase versions are additionally equipped with thermal protection mounted in the winding. Flanges for connecting pipes or fast-connection. The pumps are available as single-phase 230V ~/ 50Hz versions with a float switch, and 3-phase 400V ~ 3 / 50Hz version.
The pumps have bearings manufactured by NSK in Japan.

The pumps can be supplied with guide rail systems for installation in pump stations. The guide rail system is sold separately.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Sewage treatment plants. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 4-10

MWQ

SUBMERSIBLE SEWAGE PUMPS WITH AGITATOR (MIXER)

A series of professional submersible pumps with mixing system, designed for customers who need a strong and reliable product in their professional work. These pumps are widely used in sewage pumping stations. MWQ pumps are designed for pumping raw sewage from pumping stations where dense sludge may be deposited. The pumps have a special additional external rotor (agitator) for mixing and splitting heavy sludge. Materials used guarantee long-term and faultless operation. Motor shaft is made of stainless steel. Motor chamber is sealed with a double SiC/ SiC mechanical seal. The pump uses a multi-channel impeller for pumping large diameter impurities. All MWQ pumps are suitable for installation with a guide rail system. The motors have Class F winding insulation and single-phase versions are additionally equipped with thermal protection mounted in the winding. The pumps have bearings manufactured by NSK in Japan. Flanges for connecting pipes or fast-connection. The pumps are available as single-phase 230V ~/ 50Hz versions with a float switch, and 3-phase 400V ~ 3 / 50Hz version. The pumps can be supplied with guide rail systems for installation in pump stations. The guide rail system is sold separately.

APPLICATION:
Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Sewage treatment plants. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class F Insulation
- Operating mode - continuous
- Protection - IP68
- Water PH: 5-10
- Liquid density: 1.2x10^3kg/m^3

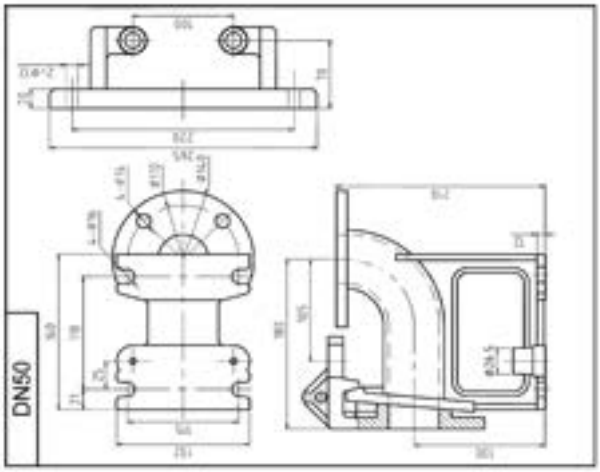
GUIDE RAIL SYSTEM

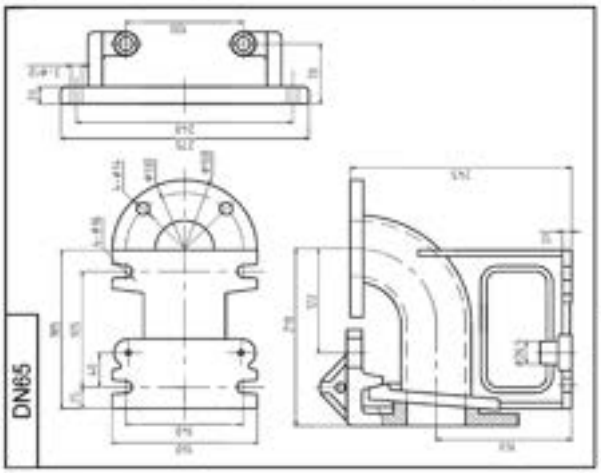
It is a device for mounting submersible pumps in sewage treatment plants on a so-called "rail". In order to mount the pump, it must be equipped with a horizontal flange.

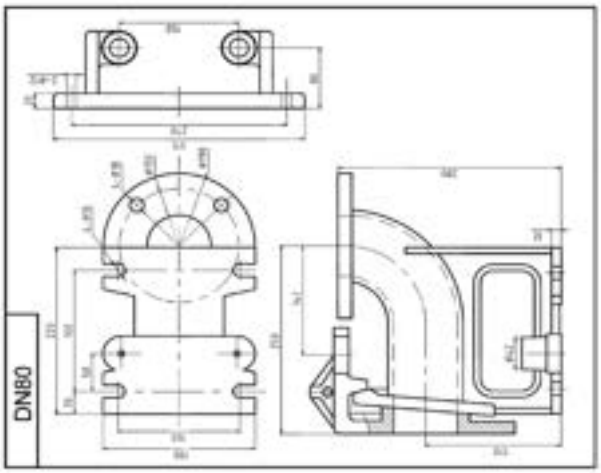
The set includes:
1. Adapter
2. Guide rail saddle
3. Upper guide rail bracket

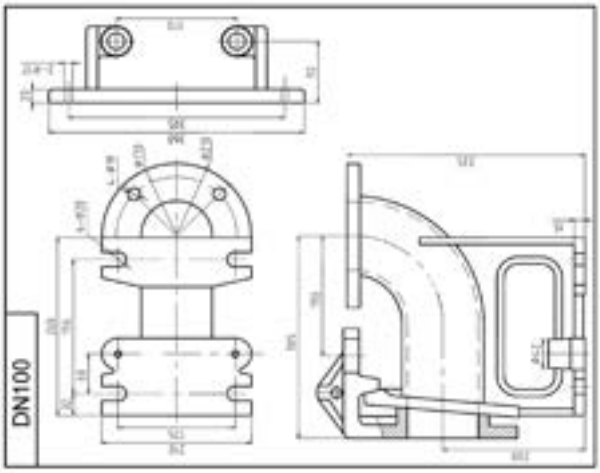
Using guide rail system connection - the lifting system allows to remove the pump without disassembling the entire pipeline.
It is particularly important in case of heavy pumps, such as ZWQ or MWQ.

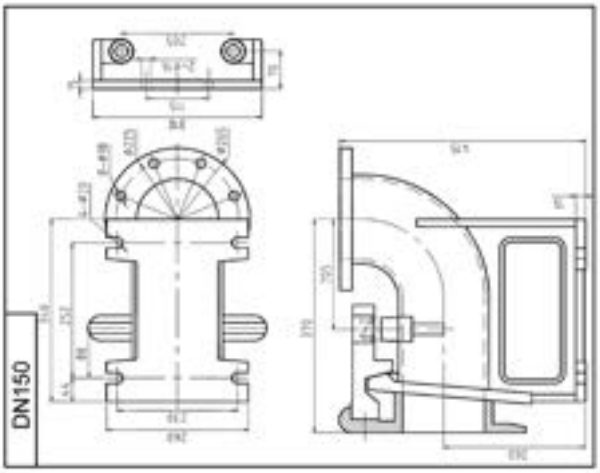
Suitable for:
- ZWQ
- MWQ
- Kraken 1800 DF











AERAT 1

Hydrotechnical device - Aerator is mainly used in professional aeration applications for marine and freshwater aquaculture. It creates mixtures with a high percentage of dissolved oxygen and has a large area of oxygen aeration, which improves water quality on agriculture farms and supports growth. The device consists of a motor with impeller and a triangular baseplate.

Areat 1 is designed for clean water from ponds, lakes and other bodies of water without the content of abrasive solids.

Description:

- Advanced technology: a unique air intake chamber and a star-shaped impeller design provide high oxidation capacity and accurate gas and water mixing. Compared to other devices, the amount of oxygen supplied is up to 30% higher, which translates into lower farming costs.
- Many small air bubbles are created on the contact surface of the impeller and the surrounding water. A rotating impeller creates water flow extending horizontally at a certain speed and flowing
- upwards, stirring the water below and thus increasing the range of oxygenation. This solution eliminates a dead angle effect creating a large gas-water intersection area, which increases the oxygen dissolution.
- A large number of small air bubbles increases the contact surface of water and gas as well as the rate of oxygen dissolution, and as a result, water is more effectively saturated with dissolved oxygen and many harmful substances are removed. Improving water quality directly affects the health of cultured organisms and accelerates the growth rate.
- The equipment is compact, flexible, easy to install and use, which saves installation time and costs.

PARAMETERS

Model	Voltage (V)	Power (kW)	Aeration (m^3/h)	Oxygenation (kg (O_2) /h)	Max. temperature (°C)	Immersion depth (m)	Active operating area (m^2)
AERAT 1	400	1,5	10 - 320	2,5	35	3 - 5	2000 - 4000

6” ISP

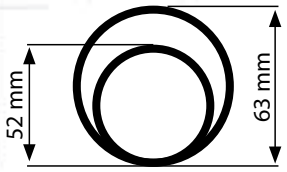
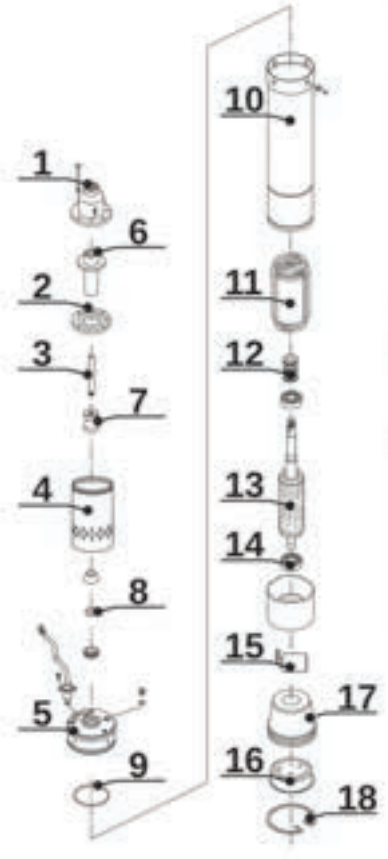
2" STING



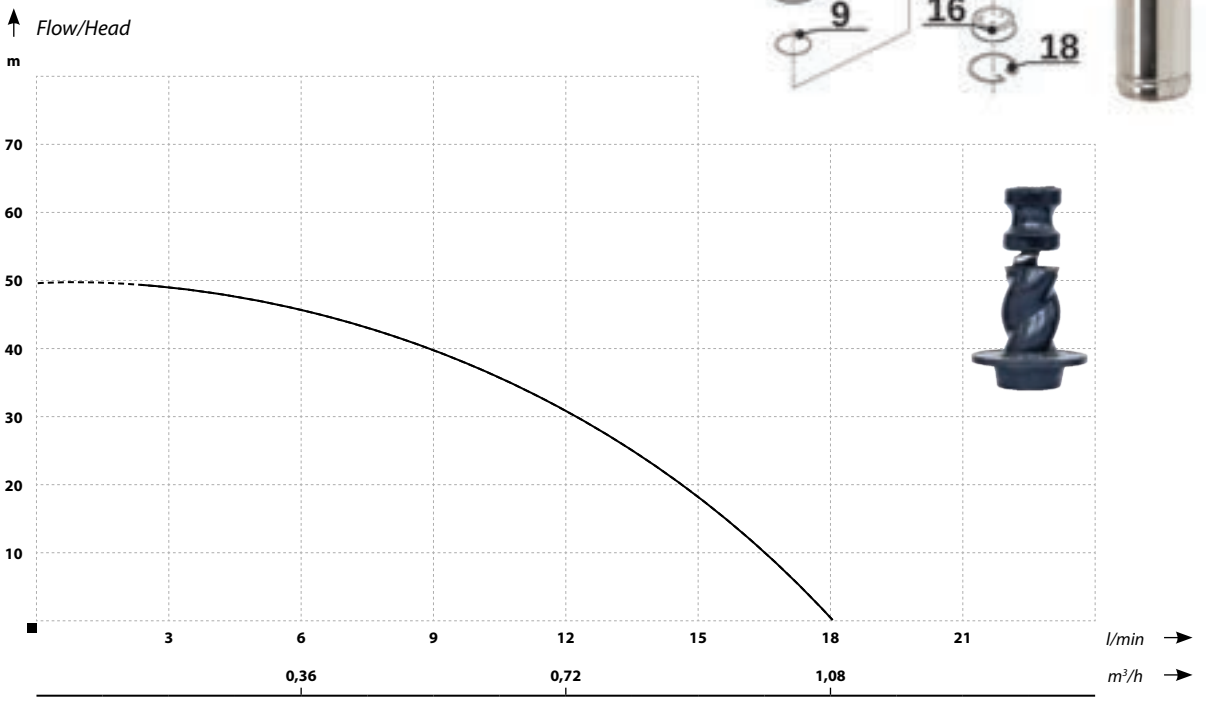


2 "STING is the first and at the moment the only IBO 2" deep well displacement pump. The diameter of the pump does not exceed 53 mm and the hydraulic section consists of the stator, rotor and clutch. The pump is mainly made of stainless steel. The pump is equipped with a 14 m cable terminated with a plug and the capacitor is built into the motor so that pump is ready for installation immediately after unpacking. The pump is equipped with thermal protection mounted in the motor winding.

APPLICATION:
Supply of water from deep wells to small single-family houses and recreational plots. The pump can be used by companies providing hydro-geological services.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Screw: stainless steel AISI 304
- Stator: NBR
- Motor: oil cooling
- Mechanical seal: ceramics/Sic
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)
2"STING	50	18	370	230	1,8	½	52/690	11

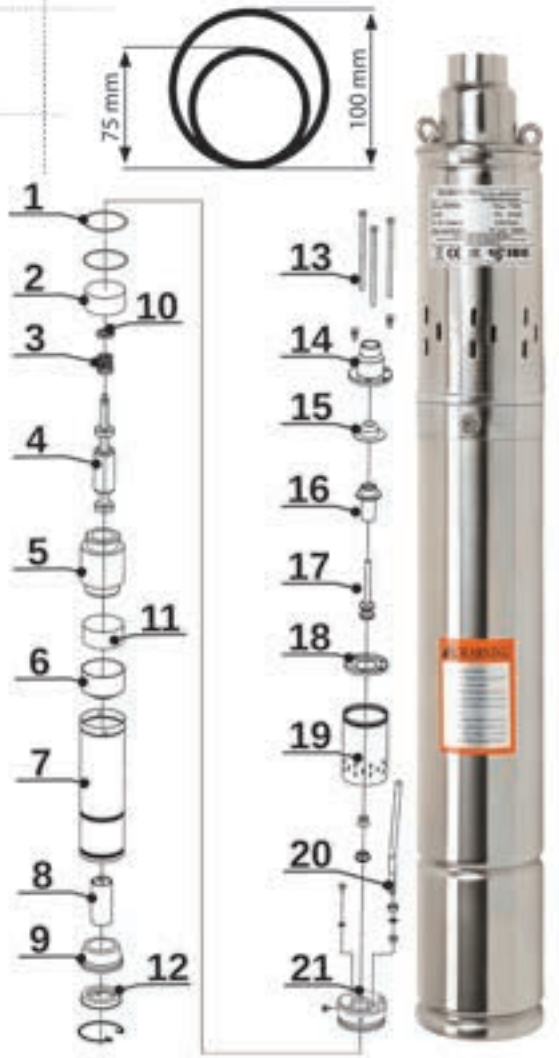
3" SQIBO / SCR

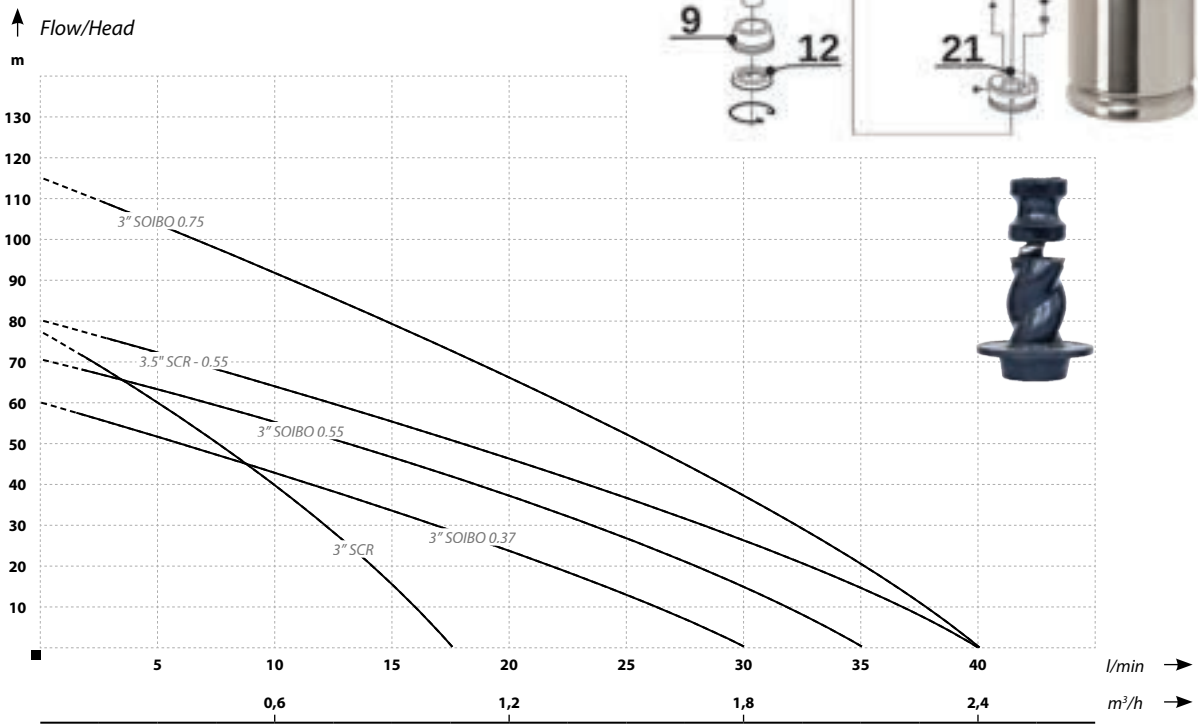
75mm deep well displacement pumps (SQIBO/3"SCR). The pump is mainly made of stainless steel, e.g. housing, bolts, inlet/outlet and rotor. Depending on the customer's requirements, the pumps are equipped with power cables of varying lengths terminated with a plug. Due to the capacitor built into the motor, the pump is ready for installation immediately after unpacking. The pump is equipped with thermal protection mounted in the motor winding. SQIBO and SCR pumps are among the most popular screw pumps available on the Polish market. The pumps are recognized by customers for their robust design and attractive price.

APPLICATION:
Supply of water to single-family houses and holiday houses.

OPERATING CONDITIONS:
- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Screw: stainless steel AISI 304
- Stator: NBR
- Motor: oil cooling
- Mechanical seal: ceramics/Sic
- Rotational speed of the electric motor: 2850RMP





PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Cable length (m)	Dimensions Dia/H (mm)	Weight (kg)
3" SCR	77	17	250	230	2,5	¾	14	75/550	10
3" SQIBO 0,37	60	30	370	230	3,4	1	15	75/580	7,5

3,5" SCR - 0,55	80	40	550	230	5,2	1	14	90/600	11

3" SKM / 4 "SKM

3"SKM 100
3" (75 mm diameter) multi-stage deep well peripheral pump. Due to the small diameter, the pump can be installed in well with 25 cm diameter pipes. Depending on the customer requirements, the pump can be equipped with standard 15 or 20 m cable with a plug. Due to the capacitor built into the motor, the pump is ready for installation immediately after unpacking. The pump is supplied with thermal protection mounted in the motor winding.

4"SKM 100
4" (98 mm diameter) deep well peripheral pumps. The pumps are designed for minimum 4-inch wells. Durable materials such as stainless steel and brass have been used in the production of pump impellers. The pumps are available with the following power cables terminated with a plug:

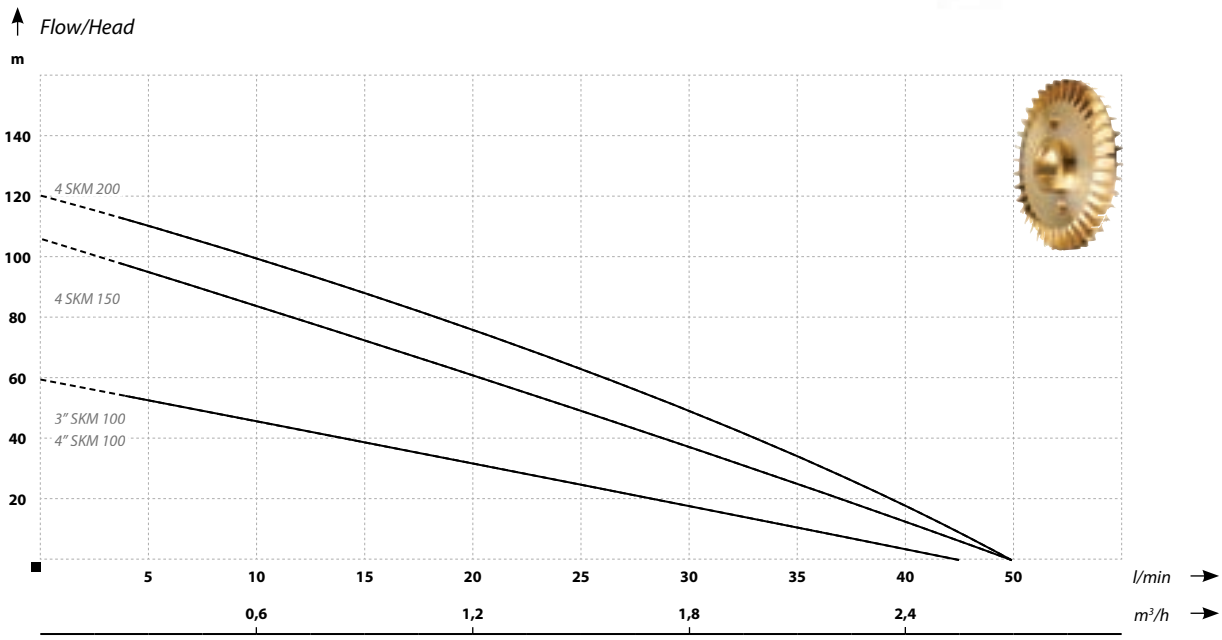
4"SKM 100 – 15m / capacitor built into the motor
4"SKM 100 – 20m + control box
4"SKM 150 – 15m / capacitor built into the motor
4"SKM 150 – 20m + control box
4"SKM 200 – 15m / capacitor built into the motor

Depending on the version, the 4"SKM pumps have thermal protection mounted in the motor winding or in the control box. The pumps are available as single-phase 230 V ~ /50 Hz versions - 4 SKM, and 3-phase 400 V ~ 3/50 Hz versions - 4 SKT.

APPLICATION:
Supply of water to single-family houses and holiday houses. Irrigating gardens.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Brass
- Venturi tube: stainless steel
- Mechanical seal: Carbon-SIC/Sic
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)

OLA INOX / AUTO

OLA / OLA INOX
98 mm diameter multi-stage deep well pumps for minimum 4" diameter ring and drilled wells. The pumps have a motor cooling jacket so they do not have to be completely submerged, and there is no need for a jacket tube, which is required for classic multi-stage pumps. Due to the capacitor built into the motor, the pump is ready for installation immediately after unpacking. The pumps are equipped with thermal protection mounted in the motor winding.

OLA AUTO
The OLA AUTO pumps are equipped with automatic pump control so there is no need to install additional equipment such as a pressure switch or external PC or SK control. The principle of the sensor operation is based on the flow rate monitoring. When the pump is connected to the electrical or hydraulic system, opening the tap will start the pump, and closing it will stop the pump within a few seconds. The pump has a built-in non-return valve that limits the return of water from the system.

Both Ola 60/60 and OLA AUTO pumps can be installed together with a pressure tank, however, it should be remembered that an additional pressure switch does not need to be installed with OLA AUTO pumps.

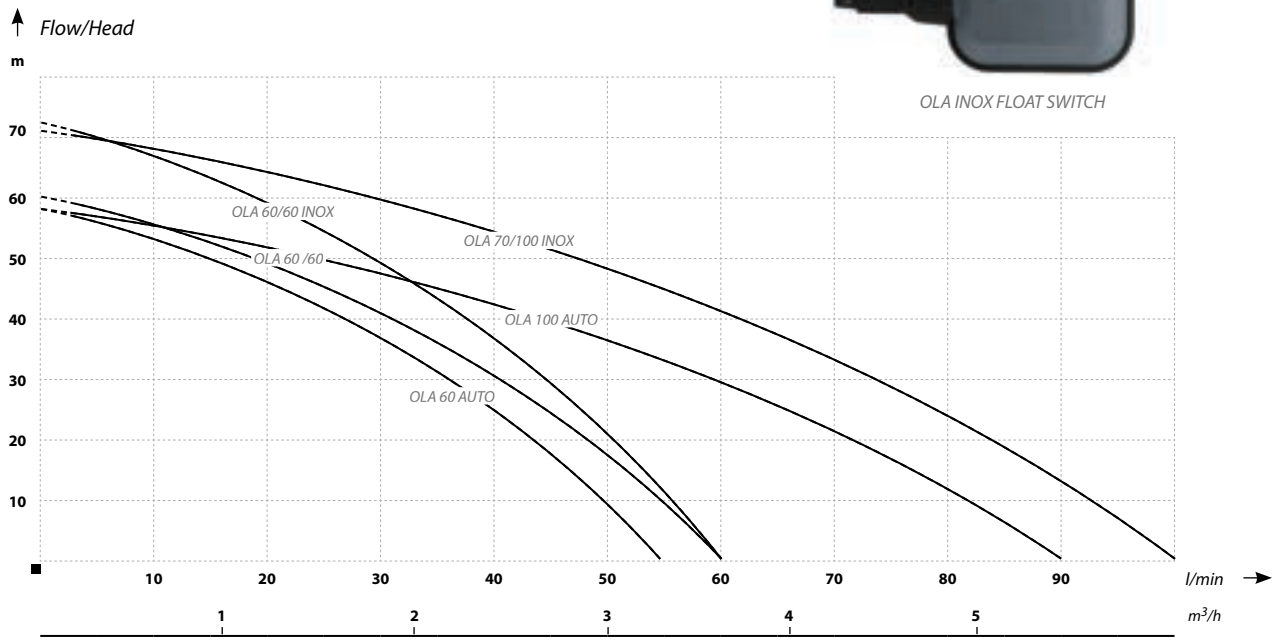
OLA INOX FLOAT SWITCH

APPLICATION:

Pumping water from ring wells, deep water wells, lakes and rivers. Supply of utility (tap) water to holiday houses and single-family houses. Irrigating gardens.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Carbon-SIC/Sic
- Motor: cooling jacket
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Cable length (m)	Dimensions Dia/H (mm)	Weight (kg)

2,5" STM

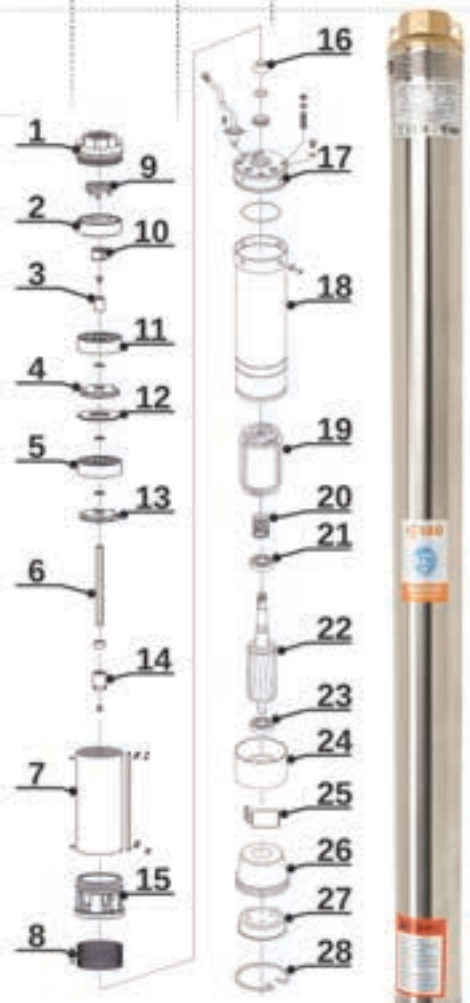
INCREASED RESISTANCE TO SAND

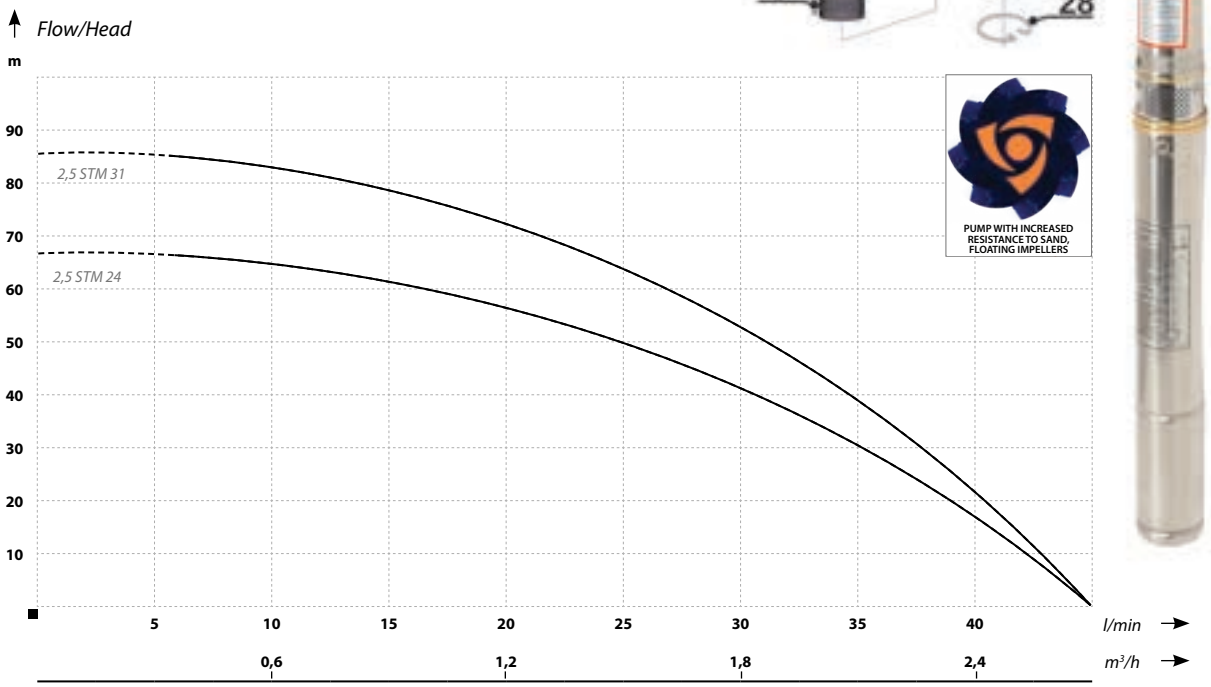
2.5" (66 mm diameter) multi-stage deep well pumps with increased resistance to sand. The 2.5 STM pumps were the first multi-stage pumps available on the Polish market with a diameter of less than 3". The pump capacitor is built into the motor. The pumps are available with 1.5 m long cable section or 20 m long stock cable terminated with a plug. Increased resistance to sand is achieved by using "floating impellers" and the selection of wear-resistant materials. The pumps are equipped with thermal protection mounted in the motor winding.

APPLICATION:
Supply of water to single-family houses and holiday houses. Irrigating small gardens.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: brass
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: steel Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP





PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)
2,5 STM 24	66	45	370	230	2,8	1	66/1305	7,8
2,5 STM 31	85	45	550	230	4,2	1	66/1565	9,5

3" Ti

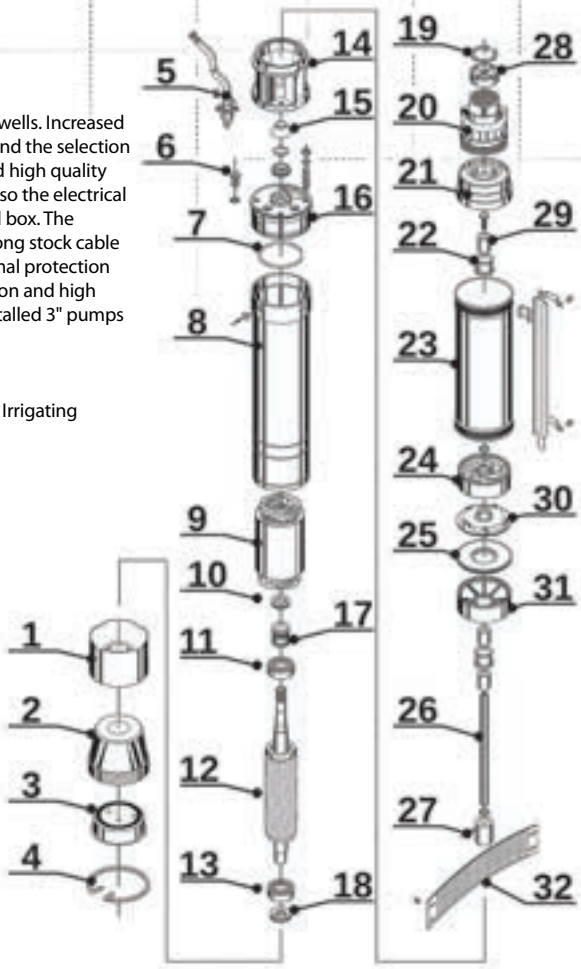
INCREASED RESISTANCE TO SAND

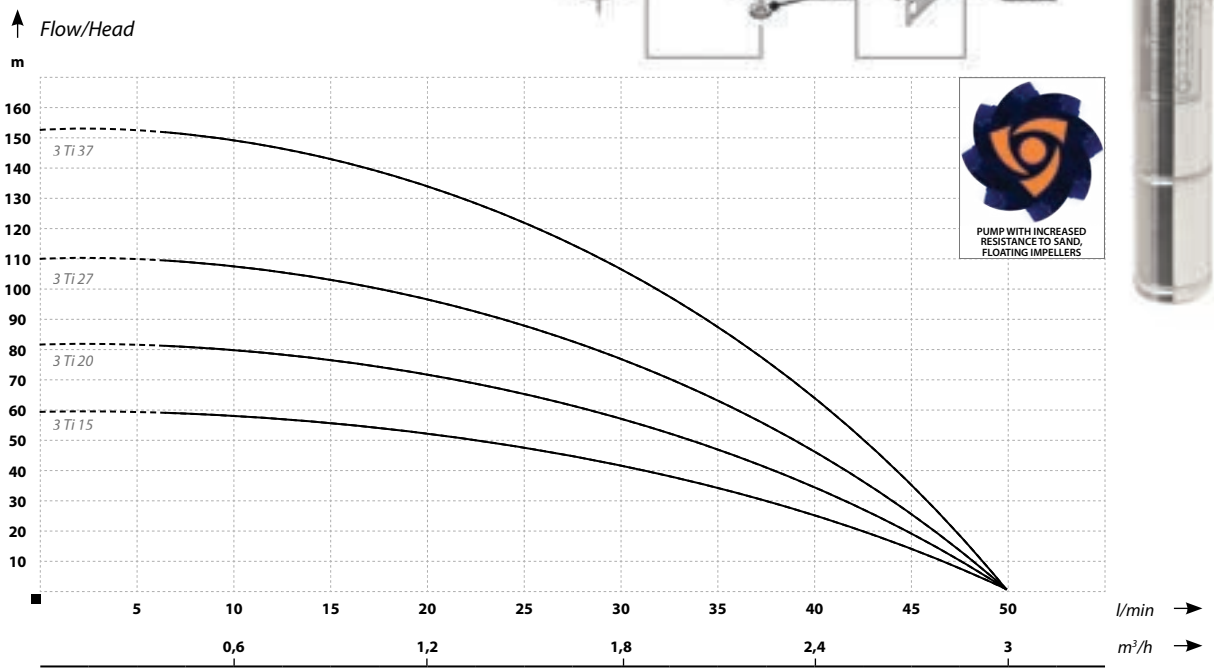
3 inch (74 mm diameter) multi-stage deep well pumps with increased resistance to sand, intended for 3 and 4 inch wells. Increased resistance to sand is achieved by using "floating impellers" and the selection of wear-resistant materials: brass, AISI 304 stainless steel, and high quality plastic materials. The pump capacitor is built into the motor so the electrical system is much simpler than in case of pumps with a control box. The pumps are available with 1.5 m long cable section or 20 m long stock cable terminated with a plug. The pumps are equipped with thermal protection mounted in the motor winding. Due to their reliable operation and high performance, the 3"Ti pumps are among the most often installed 3" pumps in Poland.

APPLICATION:
Supply of water to single-family houses and holiday houses. Irrigating gardens.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: brass
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP





PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)
3 Ti 15	60	50	370	230	3,2	1	75/1035	10
3 Ti 20	82	50	550	230	4,2	1	75/1210	12
3 Ti 27	110	50	750	230	5,2	1	75/1470	14
3 Ti 37	152	50	1100	230	6,7	1	75/1810	18

3" SDM

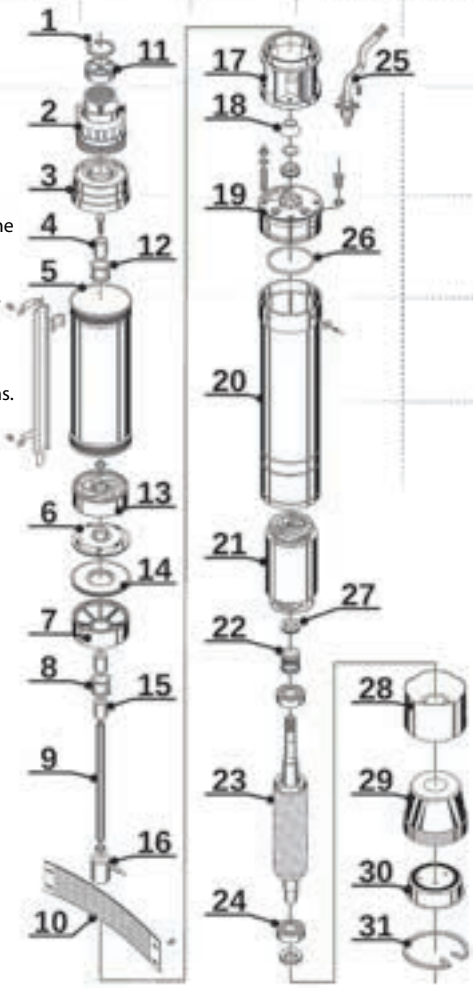
INCREASED RESISTANCE TO SAND

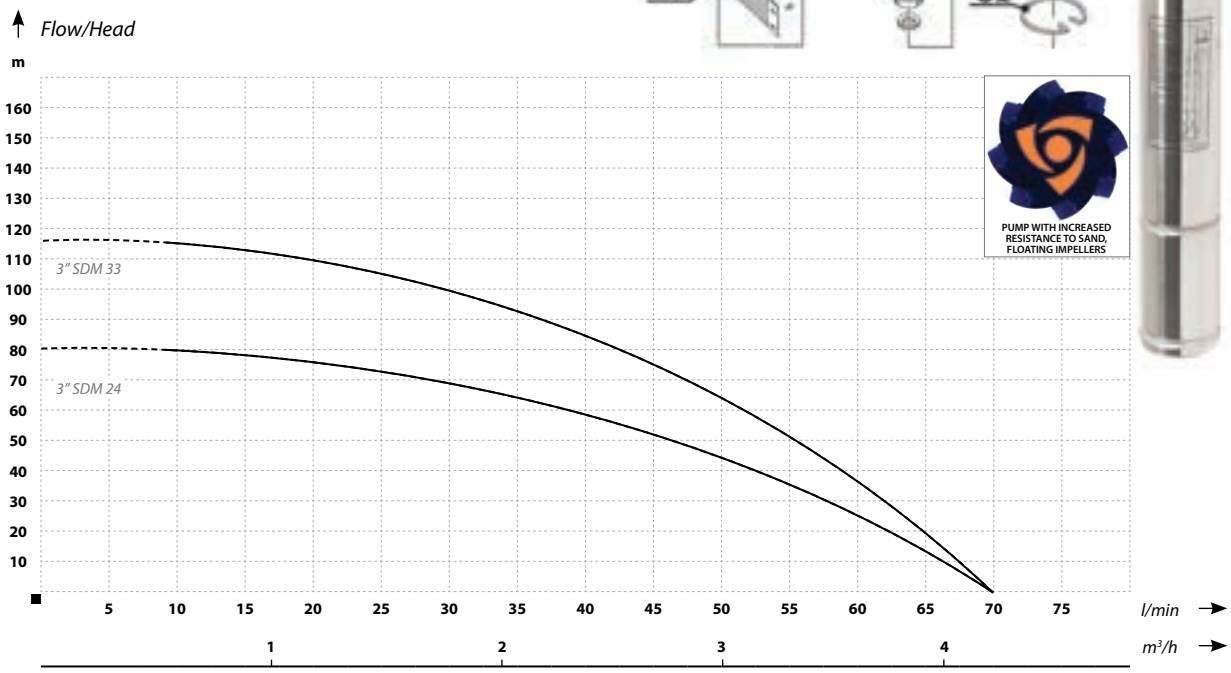
3 inch (74 mm diameter) multi-stage deep well pumps,
with increased resistance to sand, intended for 3 and 4 inch wells. Increased resistance to sand is achieved by using "floating impellers" and the selection of wear-resistant materials. The pump capacitor is built into the motor so the electrical system is much simpler than in case of pumps with a control box. The pumps are available with 1.5 m long cable section or 20 m long stock cable terminated with a plug. The pumps are equipped
with thermal protection mounted in the motor winding. The pumps design is the same as 3"Ti pumps but they provide higher flow of up to 70l/min.

APPLICATION:
Supply of water to single-family houses and holiday houses. Irrigating gardens. Drainage/dewatering.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: brass
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP





PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)
3" SDM 24	80	70	750	230	6,5	1¼	75/1320	11
3" SDM 33	117	70	1100	230	7,2	1¼	75/1660	13

3" STM

INCREASED RESISTANCE TO SAND

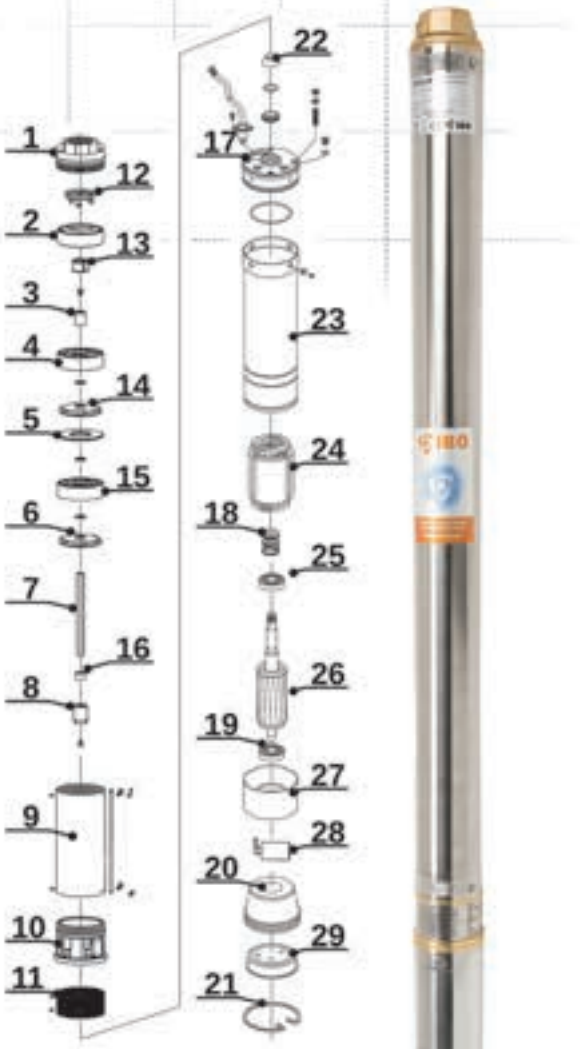
75 mm diameter multi-stage deep well pumps with increased resistance to sand, intended for 3 and 4 inch wells. Increased resistance to sand is achieved by using "floating impellers" and the selection of wear-resistant materials. The pump capacitor is built into the motor so the electrical system is much
simpler than in case of pumps with a control box. The pumps are equipped with thermal protection mounted in the motor winding. The pumps are available with 1.5 m long cable section or 20 m long stock cable terminated with a plug.

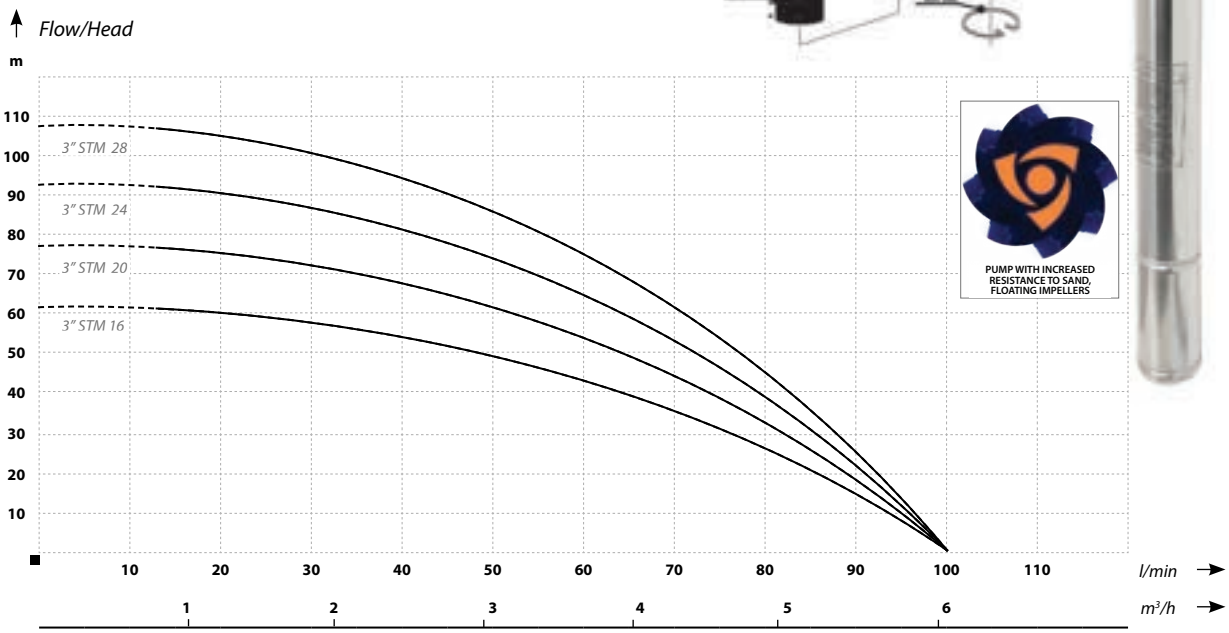
The main advantage of the 3STM pumps is their up to 100l/min. flow, exceptionally high as for 3" pumps.

APPLICATION:
Supply of water to single-family houses and holiday houses. Irrigating gardens. Drainage/dewatering.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: brass
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP





PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)
3" STM 16	62	100	750	230	5,5	1¼	75/1260	10
3" STM 20	77	100	1100	230	6,7	1¼	75/1480	12
3" STM 24	93	100	1100	230	6,7	1¼	75/1580	14
3" STM 28	108	100	1500	230	9,7	1¼	75/1760	16

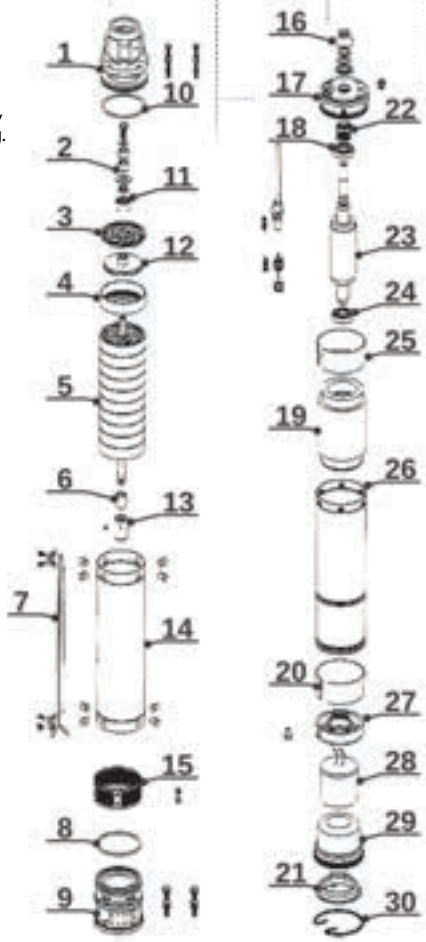
3,5" SCM / 3,5"SC

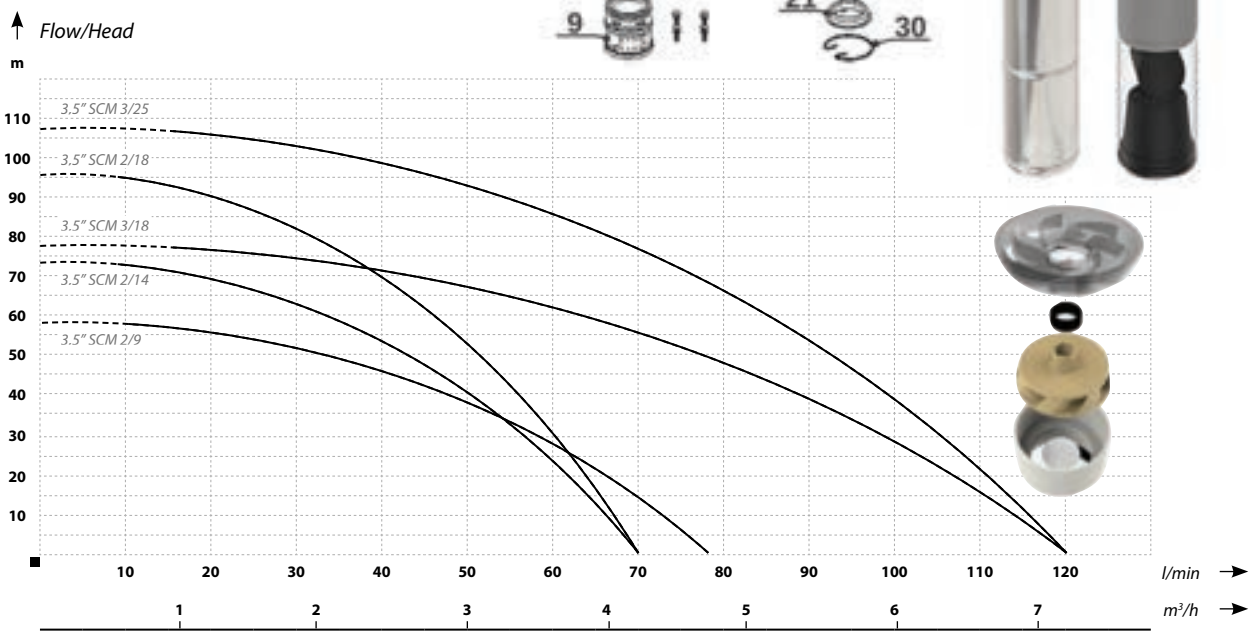
90 mm diameter multi-stage deep well pumps. Due to the proven design, it is the most economical solution for single-family houses and farms. With its small diameter, the capacitor built into the motor and the factory-mounted 18 m long cable, the pump is ready for installation immediately after unpacking. Pumps are available as 230 V ~ /50 Hz and 400 V ~ 3/50 Hz versions. Single-phase pumps are equipped with thermal protection mounted in the motor winding.

APPLICATION:
Supply of water to single-family houses and holiday houses. Irrigating gardens. Drainage/dewatering.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: grey cast iron
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP





PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)
3,5" SCM 2/9	58	78	550	230	4	1 ½	90/790	13
3,5" SCM 2/14	74	70	1100	230/400	5,8 / 2,8	1½	90/1010	16
3,5" SCM 2/18	95	70	1500	230/400	7,3 / 3,5	1½	90/1160	18
3,5" SCM 3/18	78	120	1500	230/400	7,3 / 3,5	1½	90/1410	19

3,5" SDM

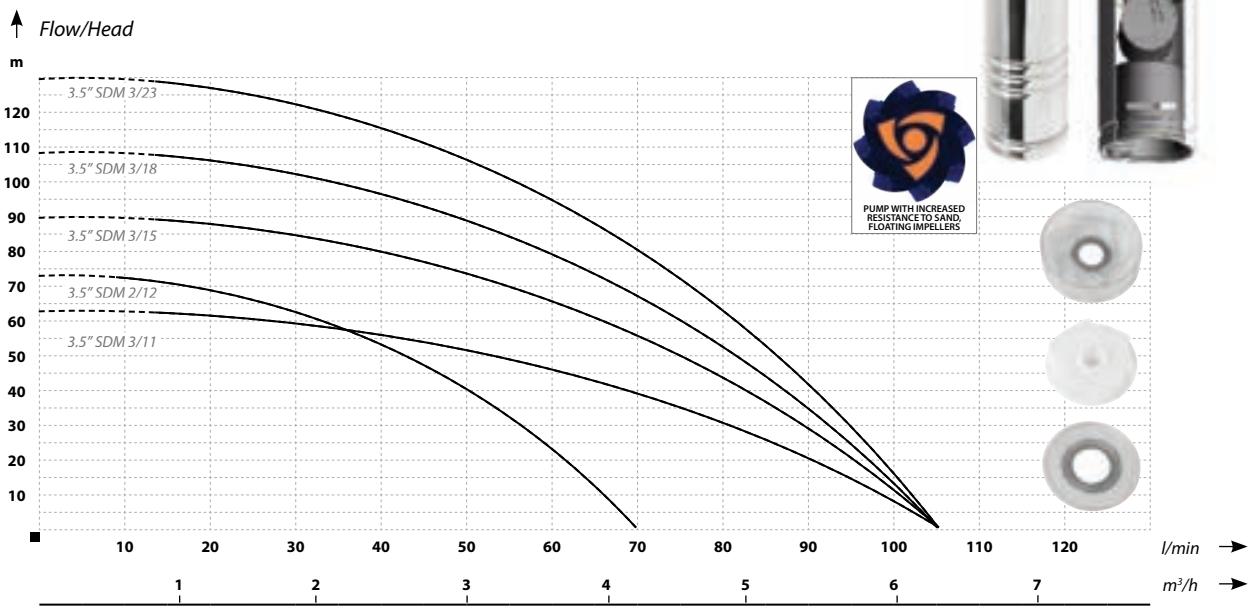
INCREASED RESISTANCE TO SAND

90 mm diameter multi-stage deep well pumps
with increased resistance to sand. Power supply 230 V~ /50 Hz.
The IBO SDM series were the first pumps on the market to be known as "sand resistant". Increased resistance to sand is achieved by using "floating impellers" and the selection of wear-resistant materials: brass, AISI 304 stainless steel, and high quality plastic materials.
The pumps are equipped with thermal protection mounted in the motor winding. With its small diameter, the capacitor built into the motor and the factory-mounted 20 m long cable, the pump is ready for installation immediately after unpacking.
The 3.5SDM pumps were the first 90 mm diameter pumps in Poland and are currently among the most often installed pumps by installation services.

APPLICATION:
Supply of water to single-family houses and holiday houses. Irrigating gardens. Drainage/dewatering.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: brass
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)

4" SD / 4" SDM

INCREASED RESISTANCE TO SAND

98 mm diameter multi-stage deep well pumps with increased resistance to sand, intended for minimum 4 inch diamater wells.

All SD pumps have PZH (National Institute of Hygiene) approval. 4SD/4SDM pumps are available with IBO and IBO ITALY motors as 400V~3 /50Hz and 230V / 50Hz versions. Increased resistance to sand is achieved by using "floating impellers" and the selection of wear-resistant materials: brass inlet and outlet, AISI 304 stainless steel housing, shaft and filter screen, and the impellers made of high quality plastic materials. Pumps with 230 V ~ / 50 Hz motors are equipped with a control box with built-in capacitor and overcurrent protection. Pumps with 0.75 kW to 2.2 kW motors are available with 1.5 m or 20 m long cable. 4SD 2/12 pumps have 20 m power cable.

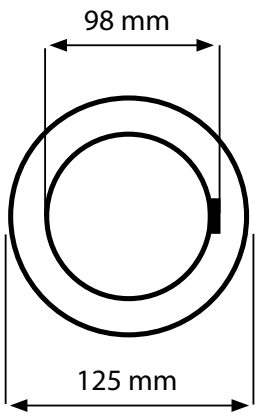
Pumps with 3 kW to 4 kW motors are available with 2 m long cable. Pumps with 5.5 kW do 7.5 kW motors are available with 3 m long cable. Upon request, the cable can be extended by any length. The IBO 4SD series were the first pumps on the market to be known as "sand resistant". Currently, they are among the few on the market to provide such high sand resistance. Maximum sand content in water is up to 5%.

APPLICATION:
Supply of water to single-family houses and farms from deep well intakes. Irrigating gardens and orchards. Land drainage/dewatering. Water supply systems. Industrial applications.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B/F Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: brass
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP

PUMP WITH INCREASED RESISTANCE TO SAND, FLOATING IMPELLERS



4" SD

INCREASED RESISTANCE TO SAND

PARAMETERS

Depending on the production batch, the device parameters may differ from the data provided in the table

5" SD

INCREASED RESISTANCE TO SAND

127 mm diameter multi-stage deep well pumps with increased resistance to sand, intended for minimum 5" wells. The IBO SD series were the first pumps on the market to be known as "sand resistant". The "sand resistance" is the unquestionable advantage of IBO pumps over competing products due their innovative and rare design with increased resistance to sand, unusual in 3-inch pumps. For 5SD 25 pumps, the maximum sand content in water is 5%. Increased resistance to sand is achieved by using "floating impellers".

Increased resistance to sand is achieved by using "floating impellers".
Upon request, the cable of any length can be installed.

APPLICATION:
Supply of water to large farms from deep water intakes, garden and orchard irrigation, shrubs and tree nurseries, land drainage/dewatering. Water supply systems, industrial applications.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: grey cast iron
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP

Flow/Head

6" SD

INCREASED RESISTANCE TO SAND

146 mm multi-stage deep well pumps with increased resistance to sand, intended for minimum 6" wells. The IBO SD series were the first pumps on the market to be known as "sand resistant".

The "sand resistance" is the unquestionable advantage of IBO pumps over competing products due their innovative and rare design with increased resistance to sand, unusual in 6-inch pumps.

For 6SD 25 pumps, the maximum sand content in water is 5%. Increased resistance to sand is achieved by using "floating impellers". The pumps are available with 6 inch IBO or IBO ITALY motors.

Upon request, the cable of any length can be installed.

APPLICATION:
Supply of water to large farms from deep water intakes, garden and orchard irrigation, shrubs and tree nurseries, land drainage/dewatering. water supply systems, industrial applications.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: grey cast iron

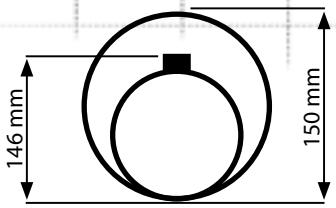
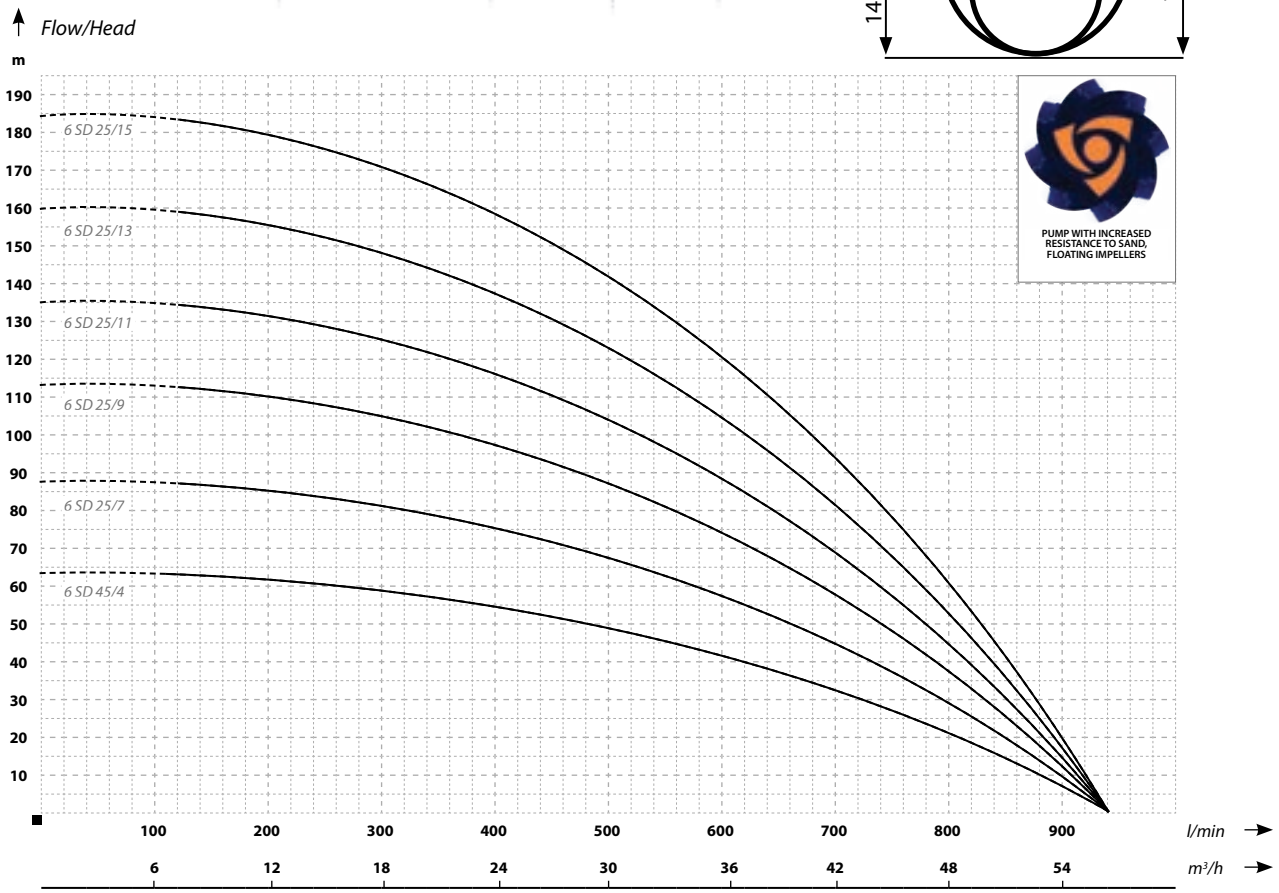
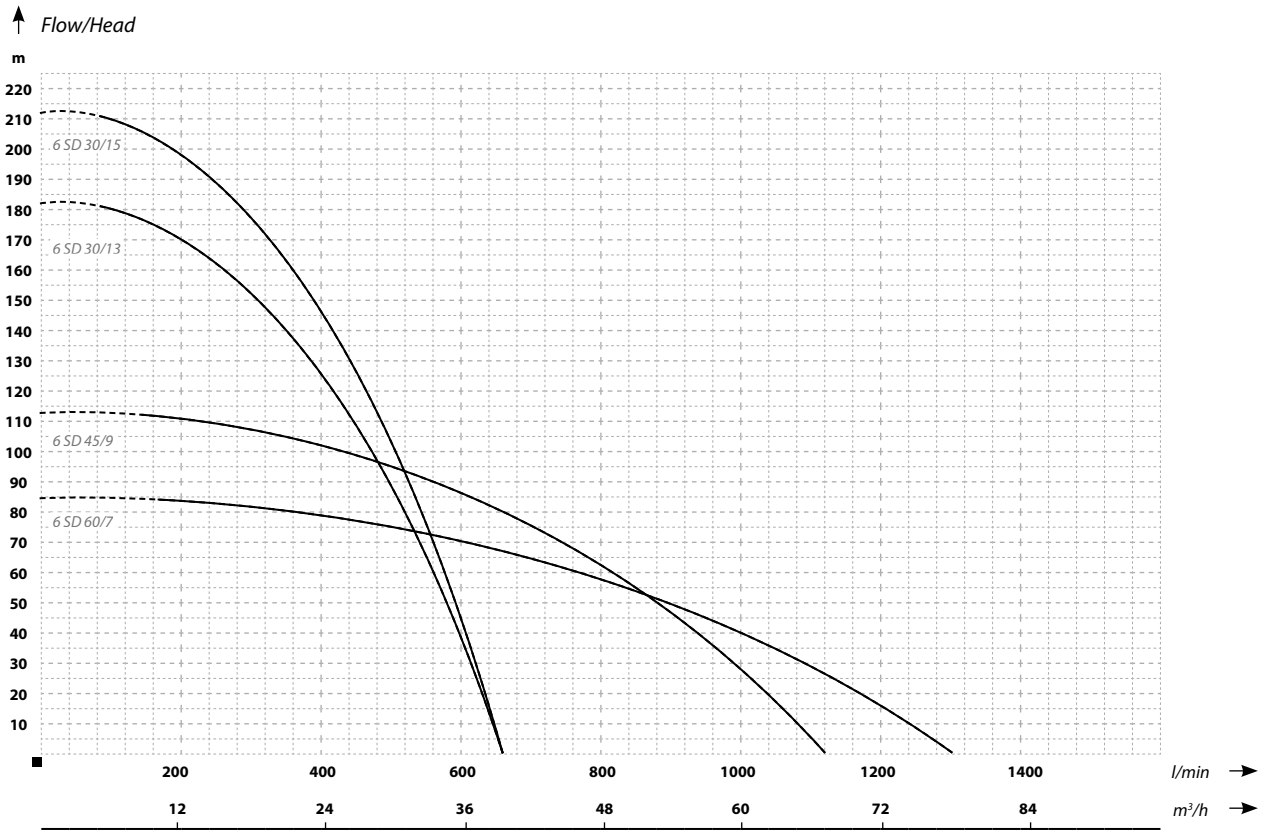
INCREASED RESISTANCE TO SAND

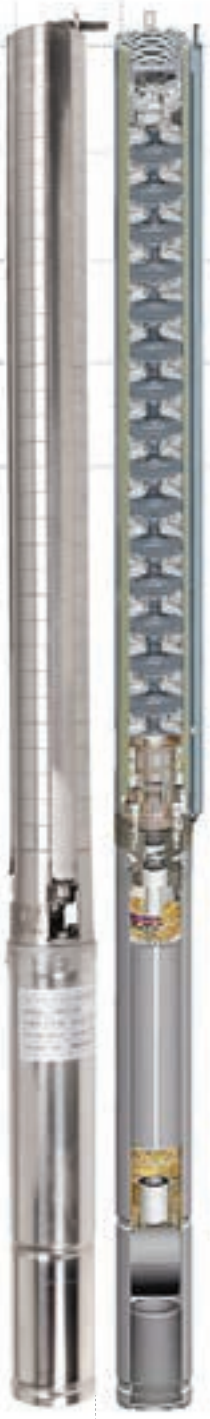






3" ISP

MADE ENTIRELY OF STAINLESS STEEL



76 mm diameter stainless steel multi-stage deep well pumps intended for wells with 4" minimum diameter. Maximum sand content in water is up to 3%. Due to the materials used, the ISP pumps are among the most durable deep well pumps. Inlet, outlet, housing, shaft and impeller are made entirely of stainless steel. The pumps are supplied with 3" oil-cooled motors.

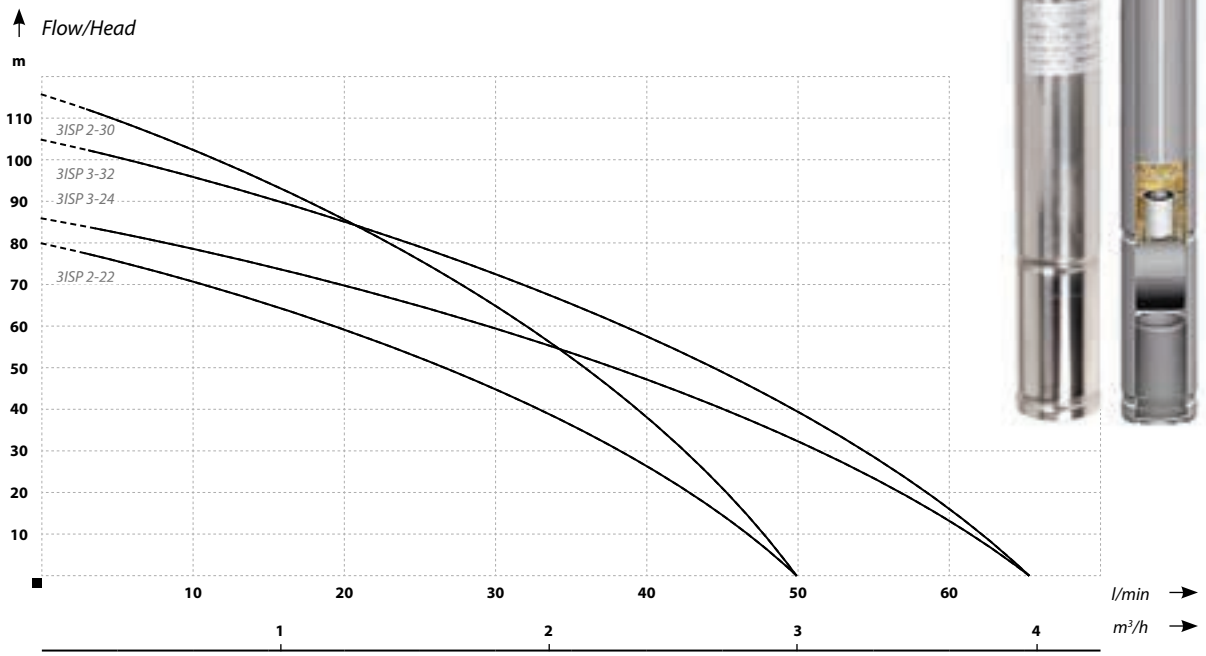
The 3" ISP series are the first pumps made entirely of stainless steel available on the Polish market.
The pumps have a 2 m long power cable that can be extended.
Upon request, the cable can be extended by any length. APPLICATION:
Supply of water to single-family houses and holiday houses. Irrigating gardens. Drainage/dewatering.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:

- Inlet/outlet: stainless steel AISI 304
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Venturi tube: stainless steel AISI 304
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP



PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Amperage (A)	Inlet/outlet (inch)	Dimensions Dia/H (mm)	Weight (kg)

4" ISP / 4" ISPM

98 mm diameter stainless steel multi-stage deep well pumps intended for minimum 4" diamater wells. Maximum sand content in water is up to 0.3%.

Due to the materials used, the ISP pumps are among the most durable deep well pumps. Inlet, outlet, housing, shaft and impellers are made entirely of stainless steel.

4 ISPM pumps are available with IBO and IBO ITALY 230 V ~ / 50Hz motors. 4 ISP pumps are available with IBO and IBO ITALY 400 V ~ / 50Hz motors.

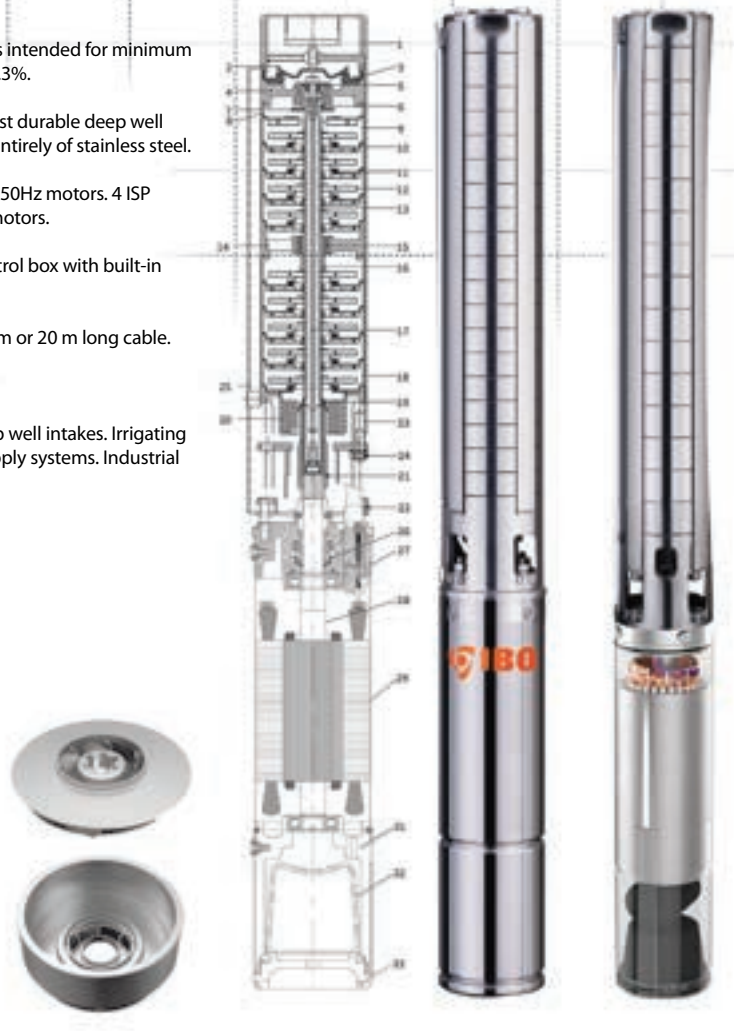
Pumps with 230 V ~ / 50 Hz motors are equipped with a control box with built-in capacitor and overcurrent protection.

Pumps with 0.75 kW to 2.2 kW motors are available with 1.5 m or 20 m long cable. Upon request, the cable can be extended by any length.

APPLICATION:
Supply of water to single-family houses and farms from deep well intakes. Irrigating gardens and orchards. Land drainage/dewatering. Water supply systems. Industrial applications.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B/F Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: stainless steel AISI 304
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Venturi tube: stainless steel AISI 304
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP



Depending on the production batch, the device parameters may differ from the data provided in the table

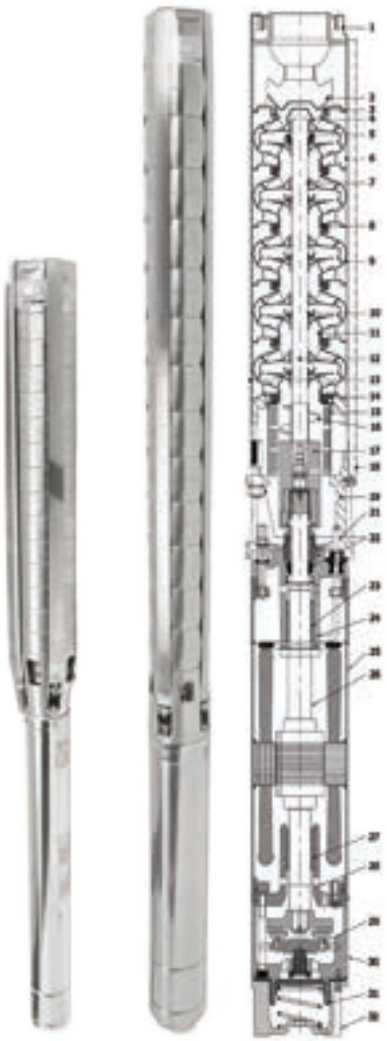
6" ISP
STAINLESS STEEL PUMPS

Stainless steel multi-stage deep well pumps with diameters of up to 145 mm, designed for pumping water with up to 0.3% sand content from a minimum 6"(150 mm) wells. Robust stainless steel design provides long-term and reliable operation.

The pumps are available with 4 and 6 inch IBO or IBO ITALY motors.
Depending on customer requirements, connected IBO ITALY motors can be oil- or water-cooled.

Due to the proven design and very high parameters compared to the diameter of the pumps, they can be used in a very wide range of applications, from supplying water to large farms to industrial solutions.

APPLICATION:
Supply of water to large farms from deep water intakes, garden and orchard irrigation, shrubs and tree nurseries, land drainage/dewatering. water supply systems, industrial applications.



OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B/F Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: stainless steel AISI 304
- Clutch, tie rods and cable protector: stainless steel AISI 304
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Venturi tube: stainless steel AISI 304
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil/water cooling
- Rotational speed of the electric motor: 2850RMP

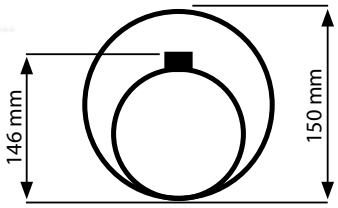
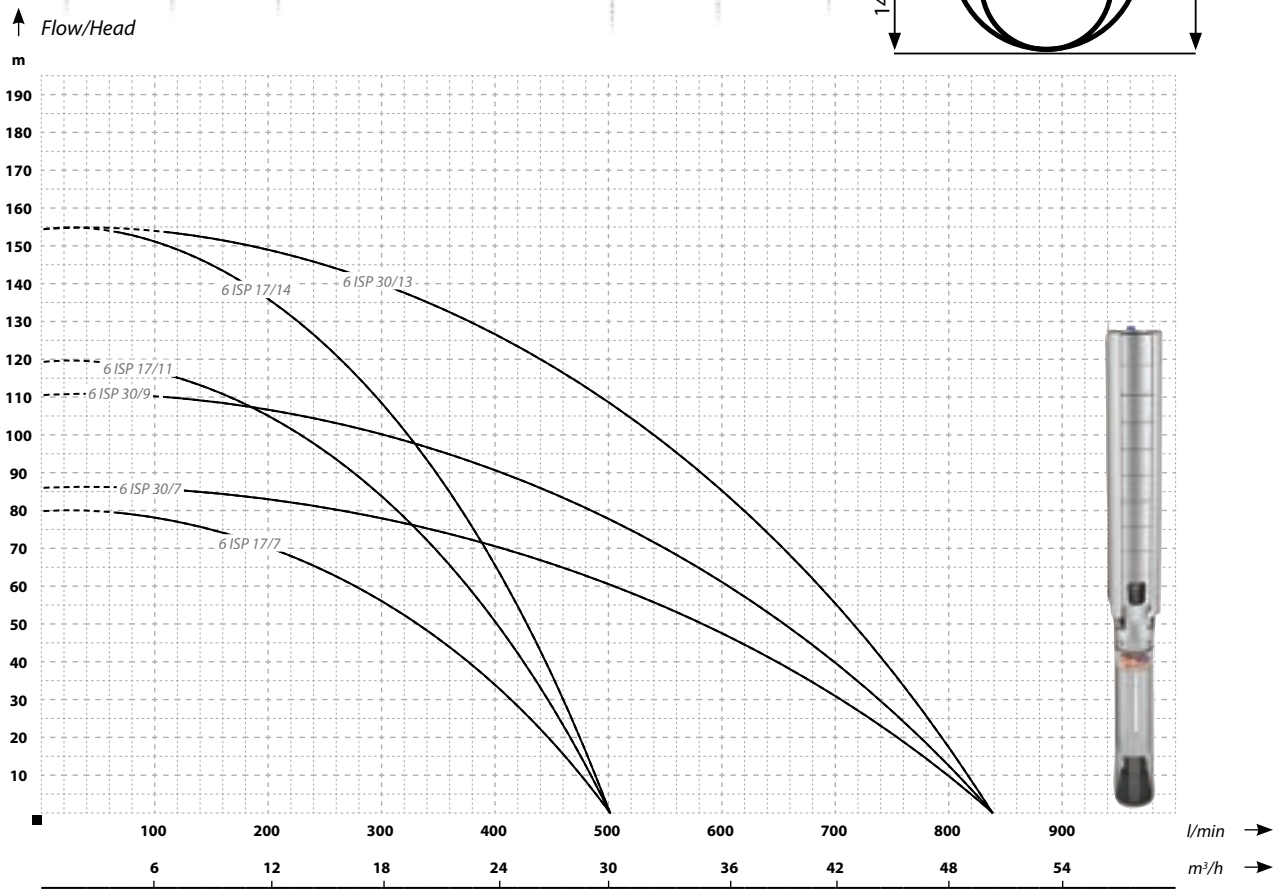
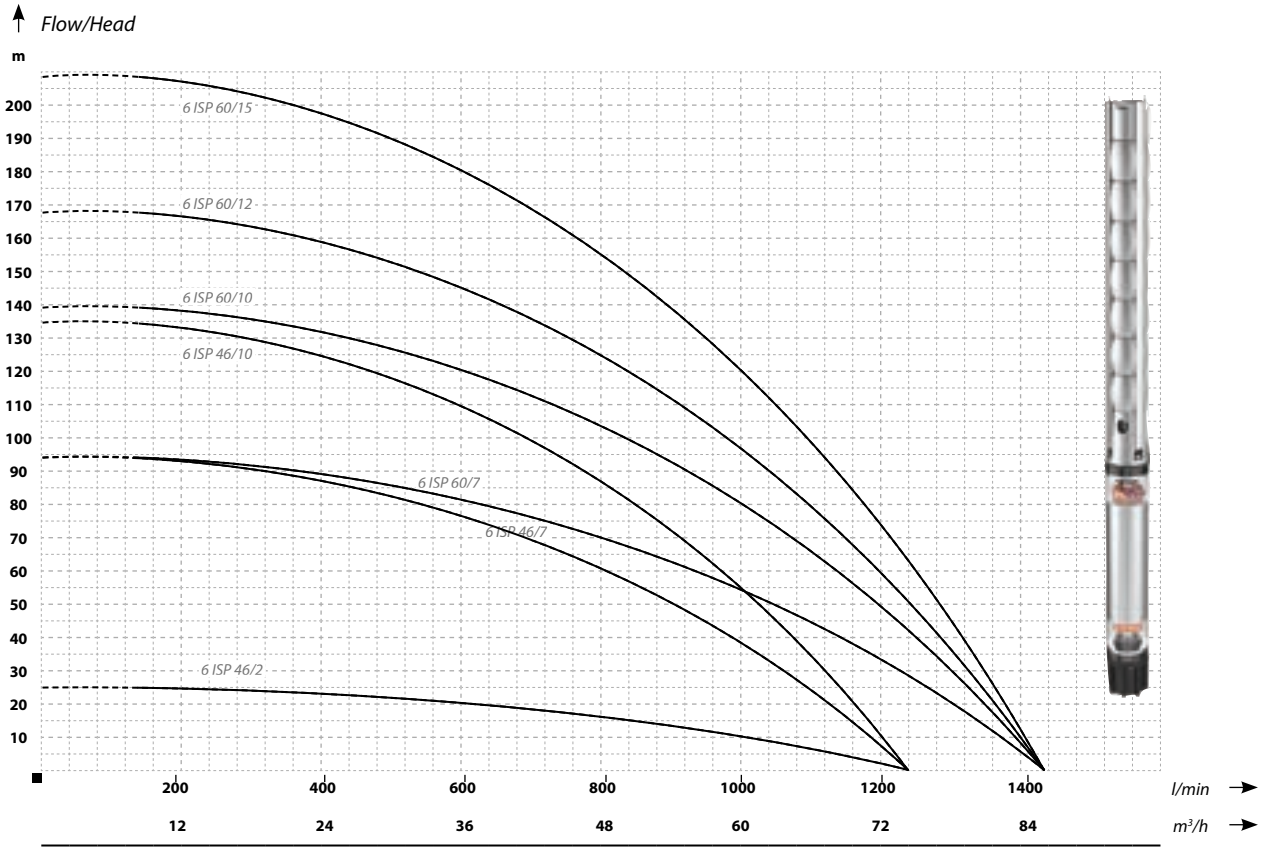
6" ISP
STAINLESS STEEL PUMPS







IBQ HIGH SPEED DEEP WELL PUMPS

IBQ multi-stage centrifugal deep well pumps are designed for operation in drilled wells and open water reservoirs. Unlike other deep well pumps, the IBQ have advanced energy-saving motors with permanent magnets and a frequency converter. As a result, the motor achieves 6000 rpm and a very high performance.

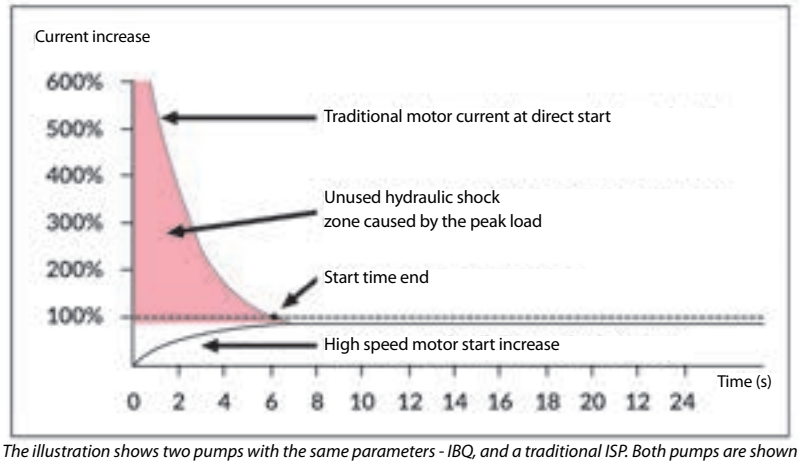
Motor design with permanent magnets and an inverter has many advantages over traditional pumps. These include:

- Energy saving due to high performance of the motor and pump. By achieving the same hydraulic parameters of pressure and performance, the IBQ pumps can be used with motor that are approximately 15-20% smaller than motors used in traditional pumps.
- Dry-running protection. The inverter electronics control the motor current draw. When dry run specific draw is detected, the motor is stopped. After a certain period of time, the pump tries to automatically restart, and its operation will continue after inflow is restored.
- Soft start resulting in no negative effect of hydraulic shock on the hydraulic system, significantly reduced mechanical wear of the motor and pump, no impact of inrush current on the electricity network.
- In traditional solutions, in order to achieve constant motor operating parameters, rapid starting is required. During starting, the motor draws a multiple of normal operating current during the first few seconds of operation (inrush current). This may result in voltage fluctuations in the electricity network affecting operation of other devices connected to this network, blown fuses, and burning of electrical connections in control units. Usually, hydraulic parameters of the pump are during starting instantaneously higher than nominal, which means that in the first seconds of operation water with higher parameters (pressure, flow) than nominal, designed for a given network is pumped into the system. This is called hydraulic shock. Repeated hydraulic shock leads to excessive wear of hydraulic components of the water supply system. Another disadvantage eliminated by soft start is the wear and tear of motor's mechanical and electrical components. Hydraulic shocks increase the mechanical load on the motor and pump, and the high inrush current weakens the internal insulation of the motor.
- The motors can operate with relatively high voltage fluctuations 160-250V for single-phase motors, 320-450V for three-phase motors.
- Due to the smaller size of IBQ pumps compared to traditional pumps, drilling and installation costs are considerably lower.

APPLICATION:
Supply of water to single-family houses and farms from deep well intakes. Irrigating gardens and orchards. Land drainage/dewatering. Water supply systems. Industrial applications.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class F Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: stainless steel AISI 304
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: noryl
- Venturi tube: noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling / with inverter
- Rotational speed of the electric motor: 6000RMP



The illustration shows two pumps with the same parameters - IBQ, and a traditional ISP. Both pumps are shown in the same scale.

ITALIAN STAINLESS STEEL DEEP WELL PUMPS
WITH DRY RUN PRO TECHNOLOGY

Due to the DRY RUN PRO technology, the FP4 pumps have increased resistance to seizure in case of dry running operation. The design and materials
used make the pump suitable for pumping water for food processing purposes. The pump has been properly certified. Pumps in A, B, D, E
sizes are equipped with radial impellers and 1¼" outlets while pumps in F, H, L sizes have semi-axial impellers and 2" outlets.

All pumps are supplied with built-in check valves. The maximum outer diameter of the pump including cable protector is 98 mm. The pump is suitable for vertical and horizontal operation.

The FP4 pumps can be used in households and on farms, in water supply systems, irrigation systems, fire extinguishing systems and industrial applications.

The FP4 deep well pumps has been manufactured in the innovative DRY RUN PRO technology by the leading Italian manufacturer of deep well pumps. They are very robust, compact and reliable. The inlet and outlet body
sections are made of AISI 304 stainless steel made by lost-wax technique, which guarantees high chemical resistance in contact with water, as well as product reliability. The pumps design is based on floating rotors moving independently in the Venturi tube chambers.

Due to the innovative design, it is protected by a European patent. This solution guarantees that pumps have unique properties, such as reliable operation in dry running conditions.

OPERATING CONDITIONS:
- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class F Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:
- Inlet/outlet: stainless steel AISI 304
- Non-return valve: stainless steel AISI 304
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Venturi tube cover: stainless steel AISI 304
- Venturi tube: PA
- Impeller: PA
- Sliding sleeve: AI203
- Clutch: stainless steel AISI 316L
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP

OPERATIONAL DATA

Max. flow rate	30 m³/h
Max. head	340 m
Max. motor power	7,5 kW
Max. sand content	185 g/m³
Max. water temperature	35°C
Max. ON/OFF cycles per hour	30
Can operate in vertical orientation

IBO ITALY AP6 F

ITALIAN STAINLESS STEEL DEEP WELL PUMPS

Following the FP4 series, the AP6 pumps intended for 6-inch wells are another very successful design of the leading Italian pump manufacturer. Their high quality and reliable design created by Italian engineers ensures long-term and faultless operation. High quality inlet and outlet castings are made of AISI 304 stainless steel. The pumps are equipped with 3 inch diameter outlets and a built-in check valve. Pumps with dedicated 5.5 kW motors have NEMA standard inlets designed for connecting 4-inch motors. Pumps with 7.5 kW motors have inlets designed for connecting 6-inch motors. The maximum outer diameter including cable protector is 144 mm. The pump shaft rotates anticlockwise when viewed at the outlet from above. The water surface should not be lower than 1 m above the inlet. The pump is suitable for vertical and horizontal operation. The AP6 pumps can be used in households and on farms, in water supply systems, irrigation systems, fire extinguishing systems and industrial applications.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class F Insulation
- Operating mode - continuous
- Protection - IP68

MATERIALS:

- Inlet/outlet: stainless steel AISI 304
- Non-return valve: stainless steel AISI 304
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Venturi tube cover: stainless steel AISI 304
- Venturi tube: PA

IBO ITALY FX6 / FX8 / FX10

Top quality cast iron deep well pumps made in Italy. Pump hydraulic components are made of cast iron, and upon customer's request brass impellers can be installed. The pump has 5"diameter outlet (DN 125), and depending on the user's requirements, it can be threaded or flanged. For pumps up to 26 kW, 6 "(144 mm) motors are mounted, for 8" pumps over 26 kW, 8 "(193 mm) motors are mounted. Maximum pump diameter including cable protector is: for 6" pumps – 153mm, 8" pumps - 193 mm, 10" pumps – 245mm.
Pumps are available on request, delivery time from 7 to 21 days.

APPLICATION:

- farms,
- water supply systems,
- irrigation systems,
- fire extinguishing systems,
- industrial applications.

DEEP WELL MOTORS

OIL-FILLED MOTORS IBO 3”/4”/6”
4IOM ITALY - OIL
6IOM IBO ITALY - OIL
6IMW IBO ITALY
8IWM ITALY
10IWM ITALY

3"/ 4" / 6" IBO DEEP WELL OIL-FILLED MOTORS

High-quality, 3, 4, 6 inch diameter deep well oil-filled motors manufactured to NEMA standard.

Top quality materials used to manufacture the motors guarantee their long-term and reliable operation. High mechanical resistance and very good electrical properties. Maximum diameter of motors: 3" - 75 mm / 4" – 98 mm / 6" – 145 mm.

OUTER CASING AND BASEPLATE:
Made of AISI 304 stainless steel.

UPPER BEARING RETAINER:
Durable cast iron protected with AISI 304 stainless steel cover. The outer tube is secured by 4 bolts.

MECHANICAL SEAL:
Graphite/ceramics.

BALL BEARINGS:
Properly sized to ensure the motor's long lifespan.

STATOR:
The design provides maximum electrical efficiency. Filled with white, highly refined mineral oil.

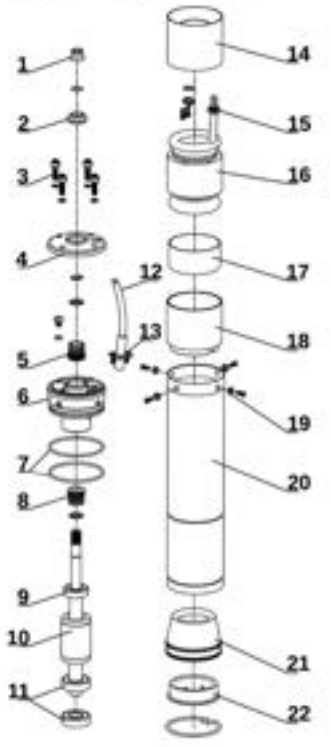
SHAFT:
The outer part of the shaft and the splines are made of AISI 304 stainless steel, which provides excellent corrosion resistance and high mechanical resistance required under high dynamic loads.

CABLE GLAND:
The design of the gland prevents the ingress of motor oil into the cable's outer sheath.

100% TESTED:
All engines are tested at the end of the production process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:

- Rotational speed: **2850 RPM**
- Ingress Protection: **IP 68**
- Winding insulation class: **B / F**
- Maximum immersion depth: **100 m**
- Maximum number of motor starts: **20 times per hour**
- Permissible voltage fluctuation: **+ 6 % / - 10 %**
- Maximum water temperature: **35°C**
- Cooling oil used: **non-toxic oil**



Depending on the production batch, the device parameters may differ from the data provided in the table

PARAMETERS

Name	Power (kW)	Voltage (V/Hz)	Thrust load (N)	Weight (kg)	Amperage (A)
3" 0,55	0,55	1 ~ 230/50	1000	8	4,2
3" 0,75	0,75	1 ~ 230/50	1500	8,5	5,4

6" 11	11	3 ~ 400/50	10000	47	24,5
6" 13	13	3 ~ 400/50	10000	52	27,5
6" 15	15	3 ~ 400/50	10000	58	31,5

4" ITALIAN DEEP WELL MOTORS
4IOM ITALY - OIL

3 YEAR WARRANTY

4" diameter Italian deep well oil-filled motors. High-quality original Italian materials, demanding tests at every stage of manufacturing process, and the expertise of Italian engineers guarantee high mechanical resistance and very good electrical properties of the product. Power cable terminated with removable cable gland provides excellent tightness. Motors diameter: 4" - 95 mm.

OUTER CASING AND BASEPLATE: Made of AISI 304 stainless steel. Outer tube made of AISI 304L (low carbon) steel for greater corrosion protection at the welded joints.

UPPER BEARING RETAINER: Cast iron treated by means of cataphoresis (4 inch motors are additionally protected with AISI 304 stainless steel cover).

MECHANICAL SEAL: Graphite/ceramics standard version or SIC-SIC (silicon carbide/silicon carbide)

BALL BEARINGS: Properly sized to ensure the motor's long lifespan.

STATOR: Special design for maximum electrical efficiency. Filled with white, highly refined mineral oil approved for use in contact with drinking water (F.F.A. approval)

SHAFT: The inner part of the rotor is made of carbon steel alloy in order to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high dynamic loads.

REMOVABLE CABLE GLAND: It provides perfect sealing under the toughest conditions and makes it easier to remove cable for maintenance purposes. Power cable is terminated with a removable cable gland for perfect sealing. Power cable is compliant with main drinking water quality standards (KTW, ACS, WRAS)

100% TESTED: All motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:

- Rotational speed: **2850 RPM**
- Ingress Protection: **IP 68**
- Winding insulation class: **F**
- Maximum immersion depth: **200 m**
- Maximum number of motor starts: 3**0 times per hour**
- Permissible voltage fluctuation: + 10 % / - 10 %
- Maximum water temperature: 35°C
- Cooling oil used: non-toxic oil
- Installation: horizontal / vertical
- Can be used with inverters.

6" ITALIAN DEEP WELL MOTORS
6IOM ITALY - OIL

3 YEAR WARRANTY

MOTORS FOR 6" WELLS OR LARGER.
High-quality original Italian materials, demanding tests at every stage of manufacturing process, and the expertise of Italian engineers guarantee high mechanical resistance and very good electrical properties of the product. All components that coin contact with water are made of AISI 304 stainless steel. Power cable terminated with removable cable gland provides excellent tightness.
PRODUCT FEATURES:
OUTER CASING AND BASEPLATE: made of AISI 304 stainless steel Outer tube made of AISI 304L (low carbon) steel for greater corrosion protection at the welded joints.
UPPER BEARING RETAINER: cast iron treated by means of cataphoresis, protected with AISI 304 stainless steel cover. Secured to the outer tube with 8 bolts.
MECHANICAL SEAL: graphite/ceramics standard version: SIC-SIC (silicon carbide/silicon carbide). Special versions on request.
BALL BEARINGS: properly sized to ensure the motor's long lifespan.
STATOR: Special design for maximum electrical efficiency. Filled with white, highly refined mineral oil approved for use in contact with drinking water
(F.F.A. approval).
REMOVABLE CABLE GLAND: it provides perfect sealing under the toughest conditions and makes it easier to remove cable for maintenance purposes. The design of the gland prevents the ingress of motor oil into the cable's outer sheath. Power cable is compliant with main drinking water quality standards (KTW, ACS, WRAS).
SHAFT: the inner part of the rotor is made of carbon steel alloy to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high holding torque.
100% TESTED: all motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:
- Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- Winding insulation class: F
- Maximum immersion depth: 200 m
- Maximum number of motor starts: 30 times per hour
- Permissible voltage fluctuation: + 10 % / - 10 %
- Maximum water temperature: 35°C
- Cooling oil used: non-toxic oil
- Installation: horizontal / vertical
- Can be used with inverters.

Upon request, 6" 6IOM motors are also available as Y-Δ versions.

PARAMETERS

6" ITALIAN WATER-COOLED DEEP WELL MOTORS

MOTORS FOR 6" WELLS OR LARGER.
High quality 6 "water-cooled motors made in Italy under the IBO ITALY brand. Their durable design guarantees long-term operation without the need for any maintenance. High-quality original Italian materials, demanding tests at every stage of manufacturing process, and the expertise of Italian engineers guarantee high mechanical resistance and very good electrical properties of the product.
PRODUCT FEATURES:
OUTER CASING AND BASEPLATE: Outer tube made of AISI 304L (low carbon) steel for greater corrosion protection at the welded joints. The baseplate is made of cast iron.
UPPER BEARING RETAINER: cast iron treated by means of cataphoresis.
MECHANICAL SEAL: graphite/ceramics standard version: SIC-SIC (silicon carbide/silicon carbide). Special versions on request.
BALL BEARINGS: properly sized to ensure the motor's long lifespan.
STATOR: special design for maximum electrical efficiency. It can be rewound. Cooling is provided by water. The winding is Class Y insulated.
SHAFT: the inner part of the rotor is made of carbon steel alloy to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high holding torques.
100% TESTED: all motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:
- Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- Winding insulation class: F
- Maximum immersion depth: 100 m
- Maximum number of motor starts: 20 times per hour
- Permissible voltage fluctuation: + 5 % / - 5 %
- Maximum water temperature: 30°C
- Cooling liquid: water
- Installation: horizontal / vertical
- Can be used with inverters.

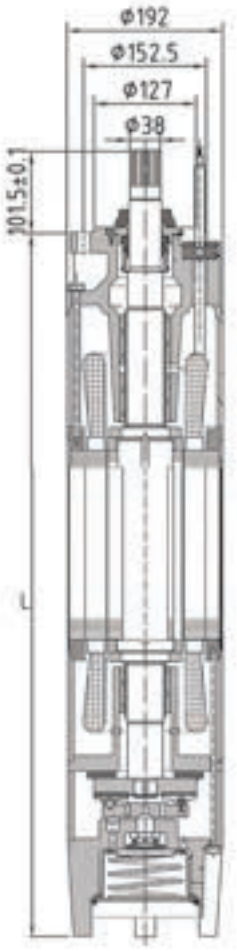
8" DEEP WELL WATER-COOLED MOTORS 8IWM ITALY

High quality 8" water-cooled motors made in Italy under the IBO ITALY brand. Their durable design guarantees long-term operation without the need for any maintenance.

PRODUCT FEATURES
OUTER CASING AND BASEPLATE: Outer tube made of AISI 304L steel for greater corrosion protection at the welded joints. The baseplate is made of cast iron.
UPPER BEARING RETAINER: G25 cast iron
MECHANICAL SEAL: standard version: SIC-NBR-AISI304
BALL BEARINGS: carbon graphite, properly sized to ensure the motor's long lifespan.
STATOR: Special design for maximum electrical efficiency. It can be rewound. Cooling is provided by water. The winding is Class Y insulated.
SHAFT: the inner part of the rotor is made of carbon steel alloy to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high holding torque.
100% TESTED: all motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:
- Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- Winding insulation class: Y
- Maximum immersion depth: 100 m
- Maximum number of motor starts: 7 times per hour
- Permissible voltage fluctuation: + 10 % / - 10 %
- Maximum water temperature: 30°C
- Cooling liquid: water
- Maximum flow: 0.5 m/s
- Installation: vertical
- Can be used with inverters.



PARAMETERS

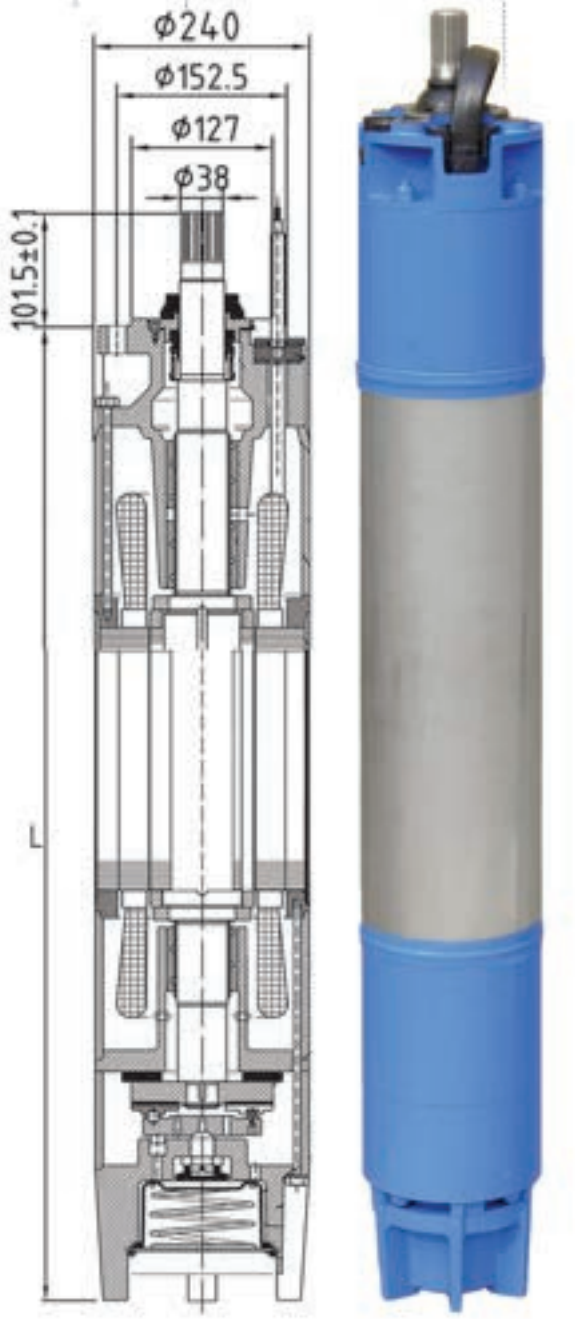
10" DEEP WELL WATER-COOLED MOTORS 10IWM ITALY



MOTORS FOR 10" WELLS OR LARGER.
Top-quality original Italian materials, demanding tests at every stage of manufacturing process, and the expertise of Italian engineers guarantee high mechanical resistance and very good electrical properties of the product. All components that come in contact with water are made of AISI 304 stainless steel. Power cable terminated with removable cable gland provides excellent tightness.

PRODUCT FEATURES
OUTER CASING AND BASEPLATE: made of AISI 304 stainless steel Outer tube made of AISI 304L (low carbon) steel for greater corrosion protection at the welded joints.
UPPER BEARING RETAINER: cast iron treated by means of cataphoresis, protected with AISI 304 stainless steel cover. Secured to the outer tube with 8 bolts.
MECHANICAL SEAL: graphite/ceramics standard version: SIC-SIC (silicon carbide/silicon carbide). Special versions on request.
BALL BEARINGS: properly sized to ensure the motor's long lifespan.
STATOR: Special design for maximum electrical efficiency. Filled with white, highly refined mineral oil approved for use in contact with drinking water (F.F.A. approval)
REMOVABLE CABLE GLAND: it provides perfect sealing under the toughest conditions and makes it easier to remove cable
for maintenance purposes. The design of the gland prevents the ingress of motor oil into the cable's outer sheath. Power cable is compliant with main drinking water quality standards (KTW, ACS, WRAS).
SHAFT: the inner part of the rotor is made of carbon steel alloy to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high holding torque.
100% TESTED: all motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:

- Rotational speed: 2850 RPM

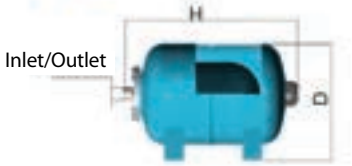
PRESSURE TANKS HORIZONTAL / HORIZONTAL WITH PRESSURE GAUGE

The 24 -150 horizontal pressure tanks for storing water in water supply systems. IBO pressure vessels are used to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. There are EPDM rubber diaphragms inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. Compressed air between the membrane and the tank body releases water from the tank under pressure. By using tanks in booster sets, the number of pump starts in a given period of time can be limited, which results in the extended lifespan of the entire system. Additionally, 50 and 100 tank models are available with a built-in pressure gauge. The volume of water inside the tank is the difference between the tank body volume and the volume of air around the membrane.

The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.
IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU.

APPLICATION:
Connected with surface or deep-well pumps, they create booster sets for supplying water to allotments, single and multi-family houses, farms and enterprises from their own intakes.



PARAMETERS

MODEL	Inlet/outlet (inch)	Operating temperature (°C)	Max. tested PT pressure (bar)	Precharge pressure (bar)	Dimension D (mm)	Dimension H (mm)
HORIZONTAL PRESSURE TANK 24	1	0 - 60	8	1,7 +/- 10%	28,7x42,5	440
HORIZONTAL PRESSURE TANK 50	1	0 - 60	8	1,7 +/- 10%	38x55	525
HORIZONTAL PRESSURE TANK 50 WITH PRESSURE GAUGE	1	0 - 60	8	1,7 +/- 10%	48x61	525
HORIZONTAL PRESSURE TANK 80	1	0 - 60	8	1,7 +/- 10%	48x61	595
HORIZONTAL PRESSURE TANK 100	1	0 - 60	8	1,7 +/- 10%	46x70	645
HORIZONTAL PRESSURE TANK 100 WITH PRESSURE GAUGE	1	0 - 60	8	1,7 +/- 10%	64x51	645
HORIZONTAL PRESSURE TANK 150	1	0 - 60	8	1,7 +/- 10%	85x53	870

PRESSURE TANKS VERTICAL / HORIZONTAL WITH PRESSURE GAUGE

The 24 - 150 horizontal pressure tanks for storing water in water supply systems. IBO pressure vessels are used to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. There are EPDM rubber diaphragms inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. Compressed air between the membrane and the tank body releases water from the tank under pressure. By using tanks in booster sets, the number of pump starts in a given period of time can be limited, which results in the extended lifespan of the entire system. Additionally, the 50 and 100 tank models are available with a built-in pressure gauge. The volume of water inside the tank is the difference between the tank body volume and the volume of air around the membrane.

The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.

IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU.

APPLICATION:
Connected with surface or deep-well pumps, they create booster sets for supplying water to allotments, single and multi-family houses, farms and enterprises from their own intakes.

PARAMETERS

MODEL	Inlet/outlet (inch)	Operating temperature (°C)	Max. tested PT pressure (bar)	Precharge pressure (bar)	Dimension D (mm)	Dimension H (mm)
VERTICAL/HORIZONTAL PRESSURE TANK TYPE 50	1	0 - 60	8	1,7 +/- 10%	380	620
VERTICAL/HORIZONTAL PRESSURE TANK TYPE 80	1	0 - 60	8	1,7 +/- 10%	480	680
VERTICAL/HORIZONTAL PRESSURE TANK TYPE 100	1	0 - 60	8	1,7 +/- 10%	480	760

STAINLESS STEEL INOX HORIZONTAL PRESSURE TANKS

The 24 - 100 horizontal pressure tanks made of AISI 304 stainless steel for storing water in water supply systems. Tank jacket and flange are made of stainless steel. IBO pressure vessels are used to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. Due to the stainless steel finish, the tanks can be installed in wells and wet rooms without the risk of early corrosion. There are EPDM rubber diaphragms inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. Compressed air between the membrane and the tank body releases water from the tank under pressure.
By using tanks in booster sets, the number of pump starts in a given period of time can be limited, which results in the extended lifespan of the entire system. Additionally, the 50 and 100 tank models are available with a built-in pressure gauge. The volume of water inside the tank is the difference between the tank body volume and the volume of air around the membrane.

The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.

IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU.

APPLICATION:
Connected with surface or deep-well pumps, they create booster sets for supplying water to allotments, single and multi-family houses, farms and enterprises from their own intakes

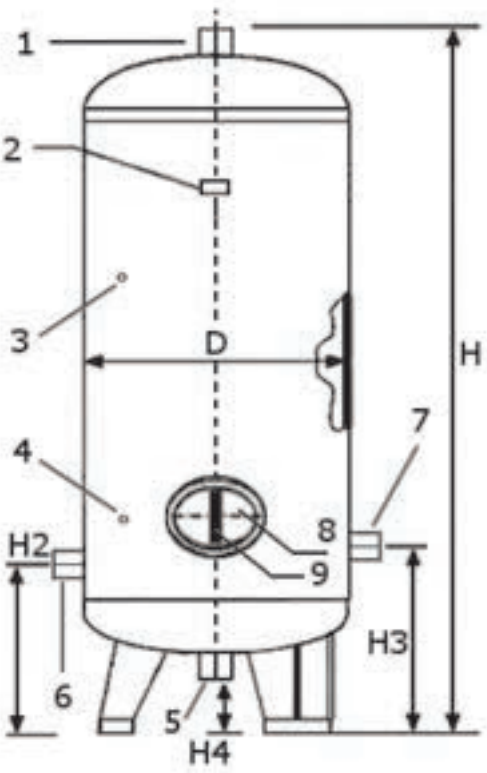
PARAMETERS

MODEL	Inlet/outlet (inch)	Operating temperature (°C)	Max. tested PT pressure (bar)	Precharge pressure (bar)	Dimension D (mm)	Dimension H (mm)
HORIZONTAL INOX PRESSURE TANK TYPE 24	1	0 - 60	8	1,7 +/- 10%	300	450
HORIZONTAL INOX PRESSURE TANK TYPE 50	1	0 - 60	8	1,7 +/- 10%	380	530
HORIZONTAL INOX PRESSURE TANK TYPE 80	1	0 - 60	8	1,7 +/- 10%	470	590
HORIZONTAL INOX PRESSURE TANK TYPE 100	1	0 - 60	8	1,7 +/- 10%	480	670

GALVANIZED TANKS

Corrosion-resistant vertical air-over-water tanks made of zinc-coated low-carbon sheet metal. Tank jacket and flange are made of galvanized steel. Galvanized tanks are designed to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. Due to the galvanized steel finish, the tanks can be installed in wells and wet rooms, and even externally without the risk of early corrosion. The tanks are available in capacity from 100 to 2000 litres. Maximum permissible pressure in the tank is 6 bar. Our offer also includes fittings for galvanized tanks.

APPLICATION:
Water storage. In combination with surface or deep-well pumps used to supply water to single and multi-family houses, farms and in industrial applications. As the only tanks, air-over-water tanks are suitable for installation in water supply systems with block filters and where additional water oxygenation is required.



1 - G 2" connection
2 - Rating plate
3 - G ½" water gauge connection
4 - G ½" Water gauge connection
5 - G 2" Connection
6 - for sizes: 100L, 500L

IBO ITALY PRESSURE TANKS

High-quality original materials, demanding tests at every stage of manufacturing process, and the expertise of engineers guarantee high resistance to wear. The 24L - 100L horizontal and 150L - 10000L vertical pressure tanks for storing water in water supply systems. IBO ITALY PRZEPONA pressure vessels are used to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. There are EPDM rubber diaphragms (manufactured in Italy) inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. Compressed air between the membrane and the tank body releases water from the tank under pressure. By using tanks in booster sets, the number of pump starts in a given period of time can be limited, which results in the extended lifespan of the entire system. Tank volume refers to the body size - the volume of water inside the tank is the difference between the tank body volume and the volume of air around the membrane.

The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.

IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU.

APPLICATION:
Connected with surface or deep-well pumps, they create booster sets for supplying water to allotments, single and multi-family houses, farms and enterprises from their own intakes.

IBO ITALY CWU PRESSURE VESSELS

High-quality original materials, demanding tests at every stage of manufacturing process, and the expertise of engineers guarantee high resistance to wear. IBO CWU 8L-50L expansion vessels for hot and cold drinking water supply systems, designed to maintain and stabilize the system pressure changes resulting from the increase in water volume. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. There are rubber diaphragms (manufactured in Italy) inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. The long-lasting maximum liquid operating temperature is 110°C, and up to 130°C for a period of 2 hours.
The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.

- The outer surface is coated with epoxy powder paint.
- IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU
- The vessels can be used with mixtures of ethylene or propylene glycol.
- They have very low gas permeability

APPLICATION:
In hot and cold drinking water supply system to maintain and stabilize the system pressure changes resulting from the increase in water volume.

PARAMETERS

MODEL	Inlet/outlet (inch)	Operating temperature (°C)	Max. operating pressure (bar)	Max. testing pressure (bar)	Precharge pressure (bar)	Dimension D (mm)	Dimension H (mm)

IBO ITALY SOLAR DIAPHRAGM EXPANSION VESSELS

High-quality original materials, demanding tests at every stage of production and the expertise of engineers ensure high resistance to wear.
IBO Solar diaphragm expansion vessels with capacities of 8L-50L are designed for use in solar installations in order to maintain and equalise pressure in them, changes of which result from an increase in water volume. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. Inside the tanks there are rubber diaphragms made of EPDM (made in an Italian factory) forming a membrane between the water inside and the outer shell of the tank.
The long-term maximum working temperature of the fluid is 110ºC and up to two hours even 130ºC. The tanks use a special valve for adding or draining air from the tank - a valve identical to that in car wheels, located in the rear part of the tank, under the cover.

- External surface with epoxy powder paint
- IBO diaphragm expansion vessels are pressure equipment complying with the requirements of Directive 2014/68/EU
- Suitable for use with ethylene or propylene glycol mixtures
- Characterised by very low gas permeability

APPLICATION:
In hot and cold potable water systems to maintain and equalise the pressure in the water, the variations of which are caused by the increase in water volume.

PARAMETERS

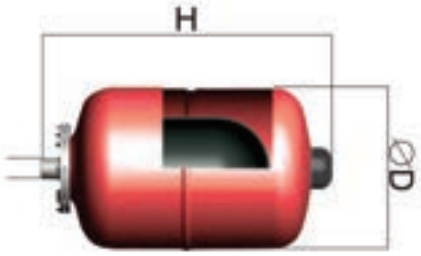
IBO HEATS PRESSURE VESSELS FOR CENTRAL HEATING SYSTEMS

IBO HEATS pressure vessels are designed for heating and solar systems to maintain and stabilize the system pressure changes resulting from the increase in fluid volume and temperature.
The main function of pressure vessels is to prevent excessive pressure increase in closed systems.

Pressure vessels use air cushion to compensate for changes of the heating medium volume in closed circuits. Inside the steel vessel there is a replaceable EPDM (synthetic rubber) membrane with high tensile strength and high temperature resistance, separating the liquid from the air. The tanks are equipped with a pressure valve to regulated the pressure inside the vessel and a replaceable flange made of galvanized steel with 3/4" inlet/outlet connection.

The vessels are intended for systems with the maximum 50% glycol content.
Vessels for suspension: 8L / 12L / 19L / 24L
Free-standing vessels: 36L / 50L / 80L / 100L

IBO HEATS pressure vessel are compliant with the Pressure Equipment Directive (PED) 2014/68/UE of the European Parliament and of the Council, as amended.



PARAMETERS

Model	Operating temperature	Max. operating pressure	Max. Pressure	Precharge pressure	Intel/outlet (inch)	Dimension D (mm)	Dimension H (mm)

MAGI 2

Energy-saving electronic circulation pumps which meet the requirements of A-rated pumps.

3 YEAR WARRANTY

The energy efficiency index of pumps from the MAGI series is:

EEI<=0,23

which according to the Commission Regulation (EU) No. 622/2012 is the reference criterion for: **the most energy-efficient circulation pumps.**

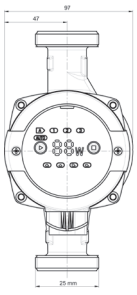
The MAGI series circulation pump is equipped with a permanent magnet motor and a differential pressure controller which automatically and continuously adjusts the pump performance to meet the actual needs of the system. The pump control panel is placed on the top of the motor, which makes it easy to operate by the user. The current consumption of electricity is displayed on its dial. The pump set includes a set of screw connections with an adapter for connecting the cable.

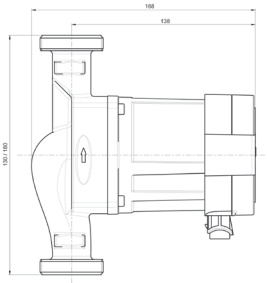
- **The pump has 8 operating modes:**
- **AUTO (factory default)** - High to low proportional pressure characteristic curve
- **LPP / HPP** - Proportional pressure curves
- **LCP / HCP** - Constant pressure curves
- **I/II/III** - Constant speed curves.

APPLICATION:

The MAGI series circulation pump is best suited for the following systems:

- Equithermic heating systems with variable flow
- Heating systems with variable pipeline temperature
- Heating systems with night mode
- Air conditioning systems
- Industrial circulation systems
- Home central heating systems and home hot water systems





SPECIFICATIONS		
Electrical supply	1×230V +6%/-10%, 50Hz	
Motor protection	There is no need for an additional motor protection.	
Ingress Protection Code	IP 44	
Insulation class	H	
Maximum ambient relative humidity	≤ 95%	
Maximum pressure in the central heating system	1 Mpa	
Minimum inlet suction pressure depending on heating medium temperature	Medium temperature	
	≤ 85 °C	0.005 MPa
	≤ 90 °C	0.028 MPa
	≤ 110 °C	0.100 MPa
EMC compliance	EN61000-6-1; EN61000-6-3	
Running pump sound pressure	43 dB (A)	
Allowable ambient temperature	0~+40°C	
Maximum heating medium temperature	TF110	
Maximum heat of pump surface	≤ 115°C	
Fluid temperature range	2~+110°C

MAGI MAX

Energy-saving electronic circulation pumps with A energy-efficiency rating.

Energy Efficiency Index for MAGI pumps is:

EEI<=0,23

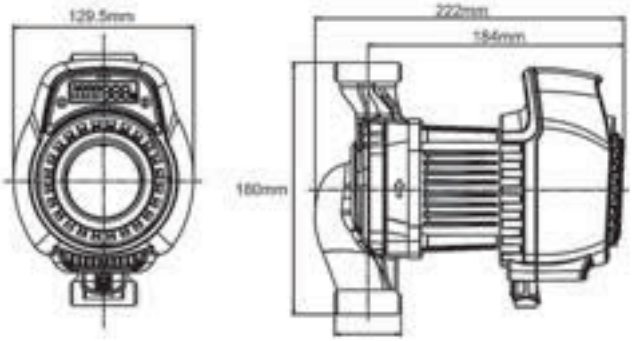
The MAGI circulating pump is equipped with a permanent magnet motor and a pressure differences regulator for automatic and continuous pump capacity adjustment to the actual requirements of the system. The pump control panel is located on top of the motor for easier operation by the user. Current power consumption is displayed on its panel.
The pump is supplied with union joints and cable adapter.

The pump provides 9 operating modes:

- **ECO (factory setting)**
  - From highest to lowest proportional pressure characteristic curve
- **PP2/PP3/PP4/PP5** - Proportional pressure curves
- **CP2/CP3/CP4/CP5** - Constant pressure curves.

APPLICATION:
Magi circulation pump is intended for the following systems:

- Constant temperature variable flow heating system
- Variable pipe temperature heating system
- Heating system with night mode
- Air conditioning system
- Industrial circulation system
- Domestic central heating system and domestic hot water system.



TECHNICAL DATA		
Supply voltage	1×230V +6%/-10%, 50Hz

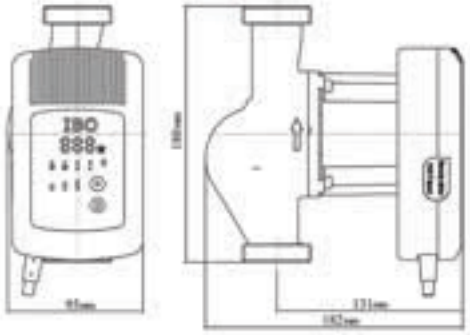
MAGI-H

Energy-saving electronic circulation pumps with A energy-efficiency rating.

Energy Efficiency Index for MAGI-H pumps is

EEI<=0,23

The MAGI circulating pump is equipped with a permanent magnet motor and a pressure differences regulator for automatic and continuous pump capacity adjustment to the actual requirements of the system. The pump control panel is located on top of the motor for easier operation by the user. Current power consumption is displayed on its panel.
The pump is supplied with union joints and cable adapter



The pump provides 12 operating modes:

- **AUTO (factory setting)** - From highest to lowest proportional pressure characteristic curve
- **I / II / III** - Constant rotational speed curves
- **PP1/PP2/PP3/PP4** - Proportional pressure curves
- **CP1/CP2/CP3/CP4** - Constant pressure curves.

APPLICATION:
MAGI-H circulation pump is intended for the following systems:

- Constant temperature variable flow heating system
- Variable pipe temperature heating system
- Heating system with night mode
- Air conditioning system
- Industrial circulation system
- Domestic central heating system and domestic hot water system.

AMG

Energy-saving electronic circulation pumps which meet the requirements of A-rated pumps.

PWM CONTROL

The energy efficiency index of pumps from the AMG series is:

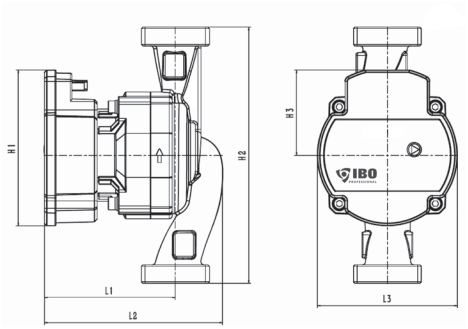
EEI<=0.20

The pumps are designed to force circulation in systems equipped with an electronic processor, which automatically controls the operation of the pumps. This feature, in combination with a frequency converter, allows for significant savings in electricity consumption. This solution is used in central heating and solar installations. The equipped processor enables the pump to choose one of 8 modes of operation as needed per installation. The power consumption is from 1/10 to 1/3 lower than in classic pumps. The pump set includes a set of screw connections and a power cord

APPLICATION:

The AMG series circulation pump is best suited for the following systems:

- Equithermic heating systems with variable flow
- Heating systems with variable pipeline temperature
- Heating systems with night mode
- Air conditioning systems
- Industrial circulation systems
- Home central heating systems and home hot water systems



Model	Dimensions (mm)

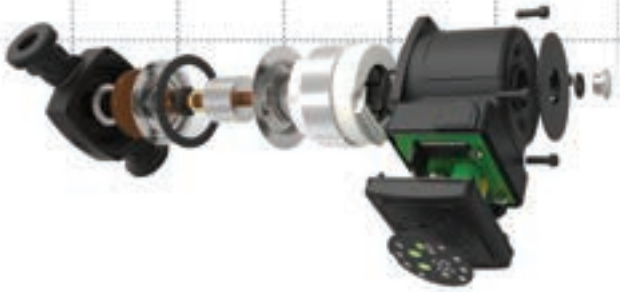
NOVA

Energy-saving electronic circulation pumps with A energy-efficiency rating



Energy Efficiency Index for NOVA pumps is

EEI<=0,23

The NOVA circulating pump is equipped with a permanent magnet motor and a pressure differences regulator for automatic and continuous pump capacity adjustment to the actual requirements of the system. The pump control panel is located on top of the motor for easier operation by the user. Current power consumption is displayed on its panel. The pump is supplied with union joints and cable adapter.

The pump provides 8 operating modes:

- **AUTO (factory setting)**
  - From highest to lowest proportional pressure characteristic curve
- **BL1 / BL2** - Proportional pressure curves
- **HD1 / HD2** - Constant pressure curves
- **HS1/HS2/HS3** - Constant rotational speed curves

APPLICATION:

NOVA circulation pump is intended for the following systems:

- Constant temperature variable flow heating system
- Variable pipe temperature heating system
- Heating system with night mode
- Air conditioning system
- Industrial circulation system
- Domestic central heating system and domestic hot water system.

NOVA MAX

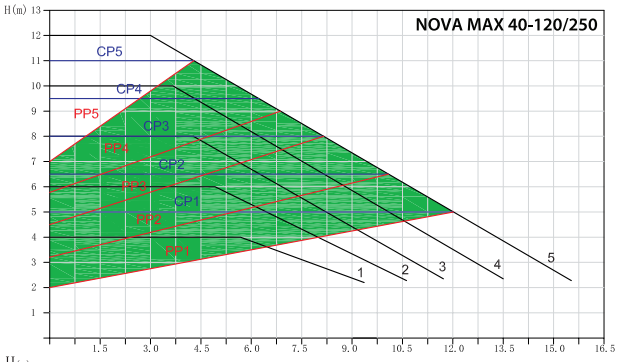
Energy-saving electronic circulation pumps that meet the requirements for A class pumps.

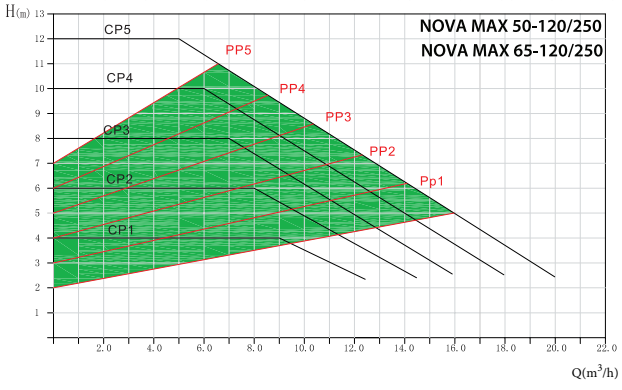
The NOVA circulation pump is fitted with a permanent magnet motor and differential pressure controller that automatically and continuously adjusts the pump capacity to meet the actual needs of the system. The pump control panel is placed on the top of the motor for easy operation by the user. Its dial displays the current electricity consumption. A set of threaded unions is supplied with the pump, including an adapter for cable connection

- **The pump features 16 operation modes:**
- **AUTO (factory setting)** - The curve of proportional pressure characteristics – from highest to lowest
- **PP1 / PP2 / PP3 / PP4 / PP5** - proportional pressure curves
- **CP1 / CP2 / CP3 / CP4 / CP5** - constant pressure curves
- **I / II / III / IV / V** - constant rotational speed curves

APPLICATION:
The NOVA series circulation pump is best suited for the following systems:

- Fixed temperature heating system with variable flow rate
- Heating system with variable pipeline temperature
- Heating system with night mode
- Air-conditioning system
- Industrial circulation system
- CH and DHW systems.





The energy efficiency coefficient for NOVA pumps is:

EEI<=0,23

TECHNICAL DATA		
Supply voltage	1×230V +6%/-10%, 50Hz	
Motor protection	No additional motor protection is required	
Ingress Protection	IP 44

IVO

Energy-saving electronic circulation pumps that meet the requirements for A class pumps.

SERWIS 48

The energy efficiency coefficient for MAGI pumps is:

EEI<=0,23

which, according to Commission Regulation (EU) no. 622/2012 is the reference criterion for the **most energy-efficient circulation pumps**

The MAGI series circulation pump is equipped with a permanent magnet motor and a differential pressure regulator, which automatically and continuously adjust the pump capacity to meet the actual needs of the system. The pump control panel is placed on the top of the motor for easy operation. Its dial displays the current electricity consumption. The pump is supplied with a set of threaded unions, including an adapter for cable connection

The pump features 8 operation modes:

- **AUTO (factory setting)** - The curve of proportional pressure characteristics – from highest to lowest
- **LPP / HPP** - Proportional pressure curves
- **LCP / HCP** - Constant pressure curves
- **I/II/III** - Constant rotational speed curves

APPLICATION:

The MAGI series circulation pump is best suited for the following systems:

- Fixed temperature heating system with variable flow rate
- Heating system with variable pipeline temperature
- Heating system with night mode
- Air-conditioning system
- Industrial circulation system
- Household CH and DHW systems

BETA 2

Energy-saving electronic circulation pumps with A energy-efficiency rating

Energy Efficiency Index for BETA 2 pumps is

EEI<=0,23

The pumps are designed for forcing circulation in central heating systems and solar systems. The pumps are equipped with an electronic processor for automatic pump control, which together with a frequency converter allows for significant energy savings. The processor provides 11 operating modes depending on the system requirements. The power consumption is from 1/10 to 1/3 of conventional pumps.
The pump is supplied with union joints and power cable.

APPLICATION:
BETA 2 circulation pump is intended for the following systems:

- Constant temperature variable flow heating system
- Variable pipe temperature heating system
- Heating system with night mode
- Air conditioning system
- Industrial circulation system
- Domestic central heating system and domestic hot water system.

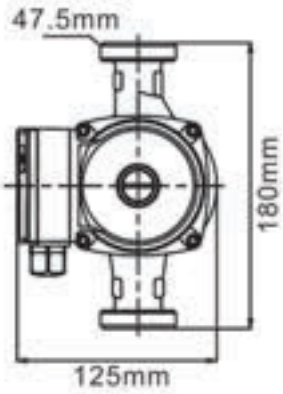
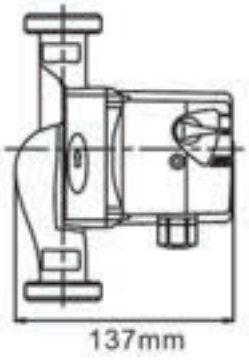
OHI PRO





OHI PRO series are seal-less circulation pumps with increased durability.
The pumps have a higher density ceramic shaft and plain bearings. Motor durability and better electrical parameters are achieved by using stronger Class F insulation winding. All processes during the manufacture of OHI PRO pumps are carried out by robots. The robots also check the quality of the intermediate products after each stage of production. At the end, the pumps are electrically and hydraulically tested. Due to the automation of the manufacturing process, the final product is of the top quality that is reproducible in every unit. All these actions have allowed us to extend the warranty period to 3 years. The pumps are supplied with union joints and a cable with a plug.

By default, the pumps have 3 speed levels for adjusting operating parameters depending on the user's and system's requirements. Due to the design and high quality materials used, the pumps are very quiet during operation.
The idea behind the creation of the OHI PRO pump was based on the belief that it is necessary to build a device with a more durable and reliable design compared to generally available circulation pumps, as well as a change in the price underselling trends.

All OHI pumps have PZH (National Institute of Hygiene) approval.

GP-SIŁ-DN25 pump group with a 3-way mixing valve
The version without a pump includes an electric actuator.
It is equipped with:
- ball valve integrated with the thermometer (power supply: red),
- ball valve with integrated check valve and thermometer (check: blue),
- adjustable bypass,
- EPP insulation.
A standard 180 mm long circulation pump can be used.
- Irreversible pump group (see: the manual).

SPECIFICATIONS	
material	steel, brass, EPP insulation
max. KVS groups with mixer	6 , 6 m3/h
max. working temp:	110°C
max pressure:	PN 6
upper connection:	G1"
lower connection:	female thread GZ 1½"
length (pump connection):	180 mm/GZ (male thread) 1½"

GGP-B-DN25 pump group with a direct heating circuit. Version without pump and 3-way mixing valve.
It is equipped with:
- ball valve integrated with the thermometer (power supply: red),
- ball valve with integrated check valve and thermometer (check: blue),
- EPP insulation.
A standard 180 mm long circulation pump can be used.
- Irreversible pump group (see: the manual).

SPECIFICATIONS	
material	steel, brass, EPP insulation
max. KVS groups with mixer	6.6 m3/h
max. working temp:	110°C
max pressure:	PN 6
upper connection:	G1"
lower connection:	female thread GZ 1½"
length (pump connection):	180 mm/GZ (male thread) 1½"

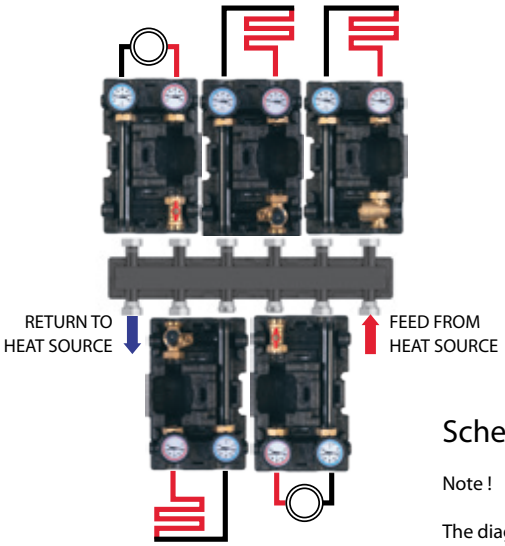
Electric actuator
3-point control, 5 or 6 Nm torque
(depending on the model), turning time by 90 ° — 135 s/2 minutes,
power cable: length depends on the model, power supply: 230 V,
Ingress Protection Code IP40.

* The manufacturer's installation, operating, and warranty guidelines apply to the pump (check before installing in the pump group).
Verify whether it is possible to correctly install the hydraulic and electrical equipment of a given manufacturer's pump in the pump group.
* The product is not included in the current catalogue price list
* Non-standard goods, made to order
* The photos and diagrams contained in this leaflet are for reference only.

DN25 manifold

DN25 manifold (up to 70 kW) for working with central heating pump groups (standard)

The manifold is used to expand heating circuits, save space, and quickly build a comfortable heating system.
The distributor manifold block has a connector with flat sealing connections. You can install pump groups in the upper and lower part of the manifold. Wall console included in the price of the manifold. The models of individual manifolds may differ in terms of the pump group assembly method (see the manual).



SPECIFICATIONS	
Power in kW at ΔT = 20 K	up to 70 kW
Upper connection	½" GW (female thread)
Lower connection	½" GW (female thread)
Pattern	125 mm
Size (including insulation):	
2 + 1 (number of heating circuits)	500 × 178 × 135 mm (W/H/D)
3 + 2 (number of heating circuits)	750 × 178 × 135 mm (W/H/D)
4 + 3 (number of heating circuits)	1000 × 178 × 135 mm (W/H/D)
Materials	brass/steel/EPP
Sealing type	EPDM
Max. operating temperature	up to 110°C
Max. operating pressure	6 bar
Kvs	3 m^3/h

Schematic diagram

Note !

The diagram cannot replace the technical design prepared by an authorised designer. Read the instructions and warranty conditions before installation.

3-way mixing valves
4-way mixing valves

Application for electric actuators and constant temperature controller or as a manual mixing valve.

TECHNICAL DATA	
Spindle rotation torque	< 1 Nm
Type of fluid	woda, glikol (≤50%)
Max. working pressure	1,0 Mpa (10 bar)
Working temperature range	-10°C ÷ 110°C

WARIANT

DN	Kvs
20	6,3 m^3/h
25	12 m^3/h
32	16 m^3/h
40	25 m^3/h
50	40 m^3/h

DN25 coupling

DN25 GW vertical hydraulic coupling (up to 70 kW) with EPP insulation

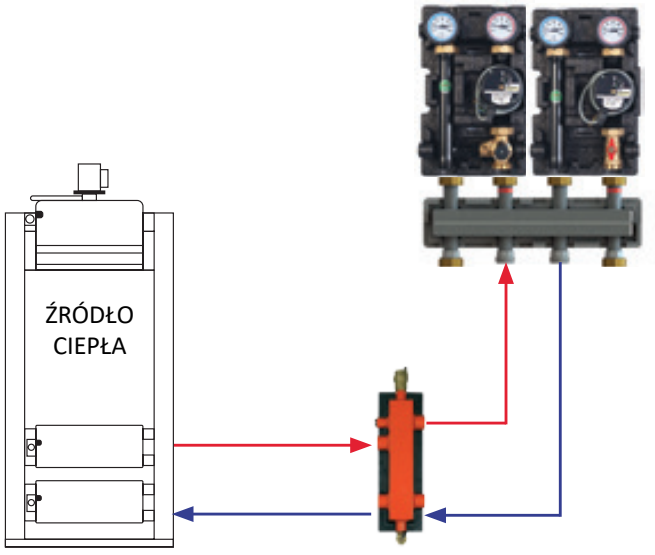
The task of the hydraulic coupling is to separate the boiler circuit from the heating circuit, balance the flows, and keep the pumps running smoothly. Additionally, the coupling protects the boiler against return temperature which is too low.
Chamber with a separation net and welded connectors:
- four 1" connectors for heating circuit pipes,
- single ½" connector for the temperature sensor,
- single ½" connector on the top for the air vent,
- single ½" connector at the bottom to the drain-fill valve. Includes:
- EPP insulation,
- single 1½" plug,
- single automatic vertical air vent,
- single ½" drain-fill valve.

SPECIFICATIONS	
Power in kW at ΔT = 20 K	up to 67 kW
Connections of the heating system	4 × 1" GW (female thread)
Temperature sensor connector	½" GW (female thread)
Size (including insulation)	368 × 113 × 106 (H/W/D)
Materials	brass/steel/EPP
Max. operating temperature	up to 110°C
Max. operating pressure	6 bar
Max. Kvs	3 m^3/h

Schematic diagram

Note!

The diagram cannot replace the technical design prepared by an authorised designer. Read the instructions and warranty conditions before installation.



Note!

- The coupling can be installed together with the DN25 standard distributor (up to 70 kW).
- The coupling cannot be installed with a decoupling distributor or with an integrated coupling and guard.
- The coupling does not contain any mounting elements.

OHI

The pumps have 3-speed motors for adjusting operating parameters depending on the user's requirements. The pumps are available with bodies made of bronze or cast iron. Due to the design and high quality materials used, the pumps are very quiet during operation.
All OHI pumps have PZH (National Institute of Hygiene) approval.

OHI 50-170/250	1	16	320	750	2	250	17

S-150 CONTROLER

The S-150 CONTROLLER is designed to control the central heating water pump. The controller is tasked with switching on the pump if the temperature exceeds the set value, and switching it off if it drops below the set value. This prevents unnecessary operation of the pump, which allows you to save electricity (savings depending on the degree of use of the furnace can reach up to 60%) and extends the life of the pump. As a result, its reliability increases and operating costs decrease. The switch-on and switch-off temperature can be set in the range of 0–99°C. Hysteresis has been replaced with the possibility of any switch-off temperature setting.

Example: Set temperature of 34°C (lower display), switch-off temperature of 31°C
If the sensor temperature reaches 34°C, the pump turns on at 34°C and continues to work until the sensor temperature drops to 31°C, the controller turns the pump off.

The controller is equipped with 2 LED displays. The current temperature measured by the sensor is displayed as standard on the upper one, while the lower one shows the switch-off temperature. The MENU button toggles the controller into preview mode and switch-on/switch-off temperature settings, as well the anti-stop function setting.

THERMOSTAT FUNCTION
The controller has also a built-in thermostat function. It is possible to set the temperature at which the controller turns off the controlled devices, and then, after lowering it to the required value, it starts the device.

ANTI-FREEZE FUNCTION
The controller is equipped with the ANTI-FREEZE function, which starts the pump when the ambient temperature drops below 5°C to prevent the controller from freezing.

SPECIFICATIONS	
Temperature adjustment range (set temp)	0 - 99°C
Supply voltage	230V/50Hz±10%
Power consumption	< 5W
Max. operating temperature	- 10°C to + 40°C
Temperature sensor	RESISTANT
Sensor cable length	ca. 1 m
Mains cable length	ca. 1 m
Pump power cord length	ca. 1 m
Output	230V/50Hz
Max output load current	pump 1 A (load resistance)

Magnetic filter

The magnetic filter is designed to trap impurities found in central heating systems. Modern systems equipped with highly efficient boiler feed installations are exposed to breakdowns and reduction of performance and efficiency due to contamination with iron oxides, the main component of rust, which are generated by corrosion and deposited in the form of sludge.
Iron oxide particles circulate throughout the heating circuit, depositing in the critical points of the installation and exposing the entire system to the failure of pumps, valves or heat exchangers etc., and the heating efficiency of the boiler is reduced, which translates into increased heating costs.

The use of magnetic filters / dirt separators improves the protection of the entire heating system, by removing most of the solid particles, which include iron or iron oxides suspended in the heating system fluid. The filters can be used in systems with continuous circulation of the heating medium. The heating medium may consist of water-glycol solution, with the glycol content not exceeding 50%..The filters can also be used in solar systems and cooling systems, trapping impurities such as sand.

CHARACTERISTICS:

- For use in central heating and solar systems
- Double filtration method
- Easy removal of impurities
- High magnetic force
- Top quality materials
- 24 months warranty
- Warranty and post-warranty service

TECHNICAL DATA:

- Material: PA66 + glass fibre /copper, stainless steel
- Maximum operating pressure 6 bar/ 0,6Mpa
- Maximum liquid temperature 90°C
- Filtration efficiency ≥500µm
- Maximum flow 30 l/min
- Magnetic force 9000 Gauss
- Connection ¾" or 1"

W15 IH-10

Surface pump designed for increasing pressure in hydraulic systems. The pump can be used as a circulator for some industrial equipment, such as machines, laser devices, injection moulding machines, food processing machinery, and can also supply water to small boilers. The pump is designed to operate with cold and hot water. The set includes an automatic switch for pump operation control. The pump inlet/outlet and impeller are made of brass. An important advantage of the pump is its low-noise operation and compact size, therefore it can be installed in residential premises.

APPLICATION:

- Increasing pressure in systems with water heaters.
- Increasing pressure in water supply systems.
- By using the pump, regardless of the pressure and its changes in the water supply system, it is possible to increase the pressure and keep it constant.
- Increasing pressure in multi-storey water systems.
- Aeration and water circulation in fish keeping.

PARAMETERS

CIRCULATION PUMPS

Circulation pumps with brass body

BETA 25-60/130

BETA 25-60/130 BR

Circulation pumps with brass body

Energy-saving electronic circulation pumps with A energy-efficiency rating with brass body.

The pumps are equipped with an electronic processor for automatic pump control, which together with a frequency converter allows for significant energy savings. Energy Efficiency Index for BETA pumps is EEI<=0.23. The pumps are equipped with an electronic display showing current energy consumption.

OHI 15-60/130 BR

OHI 25-60/130 BR

Circulation pumps for hot water systems

Seal-less 3-speed circulation pumps designed for forcing domestic hot water circulation in larger systems.
The pump is usually installed upstream the boiler or hot water tank.

OHI 15-60/130

The pumps have PZH (National Institute of Hygiene) approval.

PARAMETERS

Name	*Bieg / Tryb (x1)*	*Lift (m)*	*Capacity (l/min)*	*Motor power (W)*	*Voltage (V)*	*Inlet/outlet diameter (inch)*	*Inlet/outlet spacing (mm)*

CPI 15-15

Circulation pumps for hot water systems

Seal-less circulation pumps designed for forcing hot water circulation. In systems without hot water pumps, after opening the tap, before the hot water starts flowing, cool water remaining in the pipeline will flow first. If a hot water pump is installed, hot water will flow almost immediately after opening the tap. The pump is usually installed upstream the boiler or hot water tank. With years of experience, we have been able to improve previous designs and create the top quality pump.

Using the latest technology, the efficiency and, consequently, the energy consumption have been improved compared to older designs.

Brass body and ceramic shaft guarantee the pump is almost faultless.

The pumps have PZH (National Institute of Hygiene) approval.

ADVANTAGES:

- Robust design
- Low-noise operation
- Hassle-free control
- Easy installation
- Complete with cable and plug.

TECHNICAL DATA	
TYP:	CPI 15-15
Motor power	28 W
Voltage	230V~ / 50Hz
Motor rpm	2600 obr/min

E-IBO 15-14

Compared to traditional circulation pumps, the energy consumption of the E-IBO pumps can be as low as 3W depending on the system.

Energy-saving electronic hot water circulation pumps with A energy-efficiency rating.

The E-IBO 15-14 pumps are designed for continuous operation forcing the hot water circulation, and in small heating systems. The pumps can be used in ventilation and air-conditioning systems. By using circulation pumps, water consumption is significantly reduced.

Compared to traditional circulation pumps, using the permanent magnet motor allows to reduce the energy consumption of the E-IBO pumps to as low as 3W depending on the system. The pumps are equipped with a spherical impeller operating in various planes.

FEATURES:
- Pump parameters can be automatically or manually adjusted to the system requirements.
- A spherical Noryl impeller moves in various planes.
- Wear-resistant ceramic shaft .
- Stainless steel pump body.
- Power cable with a plug.

ADVANTAGES:
- Easy installation and start up
- Low power consumption
- High energy efficiency has been achieved by using the permanent magnet motor.
- Maximum usability
- Robust design
- Low-noise level of the pump and the entire system.

TECHNICAL DATA	
SUPPLY VOLTAGE	1×230V +6% / -10%, 50Hz PE

IPML

INDUSTRIAL CIRCULATION PUMPS FOR CIRCULATING COLD AND HOT WATER.

Pumps designed for constant or variable flow water supply systems with the medium temperature not exceeding 100°C (80°C) and the pressure not exceeding 0.6 MPa. Pumps are most often used in heating and cooling systems. The smallest of the series, the IPML 25/125 pump can also be used to fill solar systems. The IPML 50/1100 and 50/2200 water circulation pumps are intended for water containing non-abrasive and non-absorbent solid impurities of 0.27 kg/m3.

OPERATING CONDITIONS:

- Maximum liquid temperature 80 /100°C
- Maximum ambient temperature 40°C
- Class B/F Insulation
- Operating mode - continuous
- Protection - IP44
- Protection for 230V motors
- Rotational speed of the electric motor: 2850RMP

MATERIALS:

- Pump body: cast iron
- Bearing retainer: cast iron
- Motor housing: aluminium
- Shaft and rotor: stainless steel AISI 304
- Impeller: brass (to IPML 50/1100)
- Impeller: cast iron (from IPML 50/1500))
- Mechanical seal: ceramics/graphite/NBR

HAND HYDRAULIC PRESSURE TEST PUMP

The PR-50 hand pump is a piston pump designed for pressure testing of system tightness and for filling solar system. The main advantage of the pump is that it can be used without access to electric power.

Due to its open design, the pump can also be used as a 12 L vessel. The proven and durable design make the pump very popular among installers.

OPERATING INSTRUCTIONS:
Connect the end of the pressure hose to the tested system, then filled the pump tank with clean, preferably filtered water. Next, fill the system with water. The test pump is only used to fill the final amount of liquid required to achieve the desired pressure. Open V1 valve and close V2 valve.

After connecting the pump, filling the pump and the tested system with water, opening the V1 valve and closing the V2 valve, pump the water with a lever while checking the pressure gauge reading. Once the required pressure has been achieved, close the V1 valve. If, by mistake, the test pressure is slightly exceeded after closing the V1 valve, slightly open the V2 valve. The pressure will then start to drop.

APPLICATION:
- Tightness testing of pipe systems (water supply systems, central heating, compressed air, and oil systems).
- Tightness testing in the production of boilers and pressure vessels.
- Filling solar systems.
- Injecting antifreeze agents into existing central heating systems.

ADVANTAGES:
- 1.3m steel braided discharge hose - reduction of flow losses and limiting measurement errors.
- Durable piston lever - resistant to torsion, can be used as a pump carrying handle.
- The double cut-off valve system in the
- monobloc body guarantees a constant pressure and eliminates the leaks at union joints.

PARAMETERS

Name	Working volume/piston travel (ml/stroke)	Tank capacity litre (l)	Max. pressure MPa/bar/kg) (cm2)	Inlet/outlet (inch)	Dimensions L/H/W (cm)	Weight (kg)
PR – 50	45	12	5/50/50	1	49/16,5/16,5	7,8

PR – AUTO

ELECTRIC HYDRAULIC PRESSURE TEST PUMP

IMAGE: PR AUTO

Electric pump designed for pressure testing of system tightness and for filling solar system. The pump's electric motor makes its use exceptionally easy and comfortable. The pump comes with a liquid container, suction hose, high pressure hose, overflow hose and suction filter. Unlike the PR AUTO hand pump, it can also be used to fill the systems with water.

OPERATING INSTRUCTIONS:
Connect the suction to the filter and then connect it the pump along with the overflow and high pressure hose.

Loosen the pressure adjustment screw to prevent the sudden pressure increase after starting the pump.

When the suction hose with the connected filter and the overflow hose are placed in a container with water, close the valve to which the high pressure hose (black) is connected.

After setting the desired pressure with the pressure adjusting screw, you can start filling the system.

APPLICATION:
- Tightness testing of pipe systems (water supply systems, central heating, compressed air, and oil systems).
- Tightness testing in the production of boilers and pressure vessels.
- Filling solar systems.
- Injecting antifreeze agents into existing central heating systems.

ADVANTAGES:
- Can be used to fill the system
- Automatic operation - pump equipped with an electric motor
- The pump packaging can also be used as a water tank
- All hoses and filter included
- Easy-to-use

PARAMETERS

AOP - PUMPS / OIL SETS

IMAGE: AOP60

IMAGE: AOP55

IMAGE: AOP60 E Set

IMAGE: AOP60 Set

AOPs are displacement vane pumps designed for pumping diesel fuel, heating oil and bio-diesel fuel. The pumps are equipped with thermal protection mounted in the motor winding.

AOP 60 and AOP 55 pumps are powered by 230 V/50 Hz single-phase AC. AOP40 - 12 V and AOP70 - 12/24 V pumps are power by 12 V or 24 V DC batteries. The pumps are equipped with a by-pass excess flow valve.

APPLICATION:
The pumps are used in industrial, agriculture and domestic applications.
AOP 60 pumps are also available in professional pump sets with complete fittings.

The set includes:

- AOP pump
- Frame for transporting and stable installation of the set.
- Oil filter to prevent solid particles such as sand, filings etc. from getting into a pump.
- Gun (filler nozzle) with automatic flow cut-off and swivel connector. The gun returns when a tank is fully filled.
- Mechanical flow meter (AOP 60, AOP 80 set, accuracy ± 1%) with a three-digit erasable dial and non-erasable total meter.
- Electronic flow meter (AOP 60E set, accuracy ± 0.5%) with a seven-digit erasable display and non-erasable total meter.
- 4 m delivery-side oil-resistant rubber hose.
- 2 m suction-side oil-resistant rubber hose with non-return valve and a suction strainer.

APPLICATION:
Transport companies, agriculture farms, industrial plants. Its handy housing ensures comfortable handling between the barrels, tanks or stationary installation.

BZP / H-BZP

INTERNAL COMBUSTION PUMPS

IMAGE: BZP-10

IMAGE: BZP-20

Pumps mounted on a metal support frame. Used for draining and irrigation. The pumps are designed for pumping clean and dirty water with solids of a maximum size permissible in accordance with technical parameters. The pumps are an excellent solution for civil engineering, fire services and agriculture farms. The pumps with internal combustion engines are fully independent of the electricity network, therefore they are very popular among the customers. The set includes a metal frame holding the entire internal combustion system, i.e. a petrol engine, fuel tank and pump with inlets and outlets.

General purpose SAE 10W-30 oil should be used with the BZP pump motor;

Two types of hoses are required for the pump:

- The suction hose must be leak-proof along its entire length and should have a rigid braid to prevent it from sucking in / jamming during operation. The hose diameter must match the pump inlet diameter, the hose diameter must not be smaller. Mount a suction strainer with a non-return valve at the end of the suction hose.
- The discharge hose diameter should match the outlet diameter. Woven (fire) hoses can be used as discharge hoses.

PARAMETERS

Name	Engine type (strokes)	Engine rotational speed (rpm)	Fuel/oil tank capacity (L)	Fuel type	Power (HP)	Weight (kg)

PRO / PRN

TRACTOR PUMPS

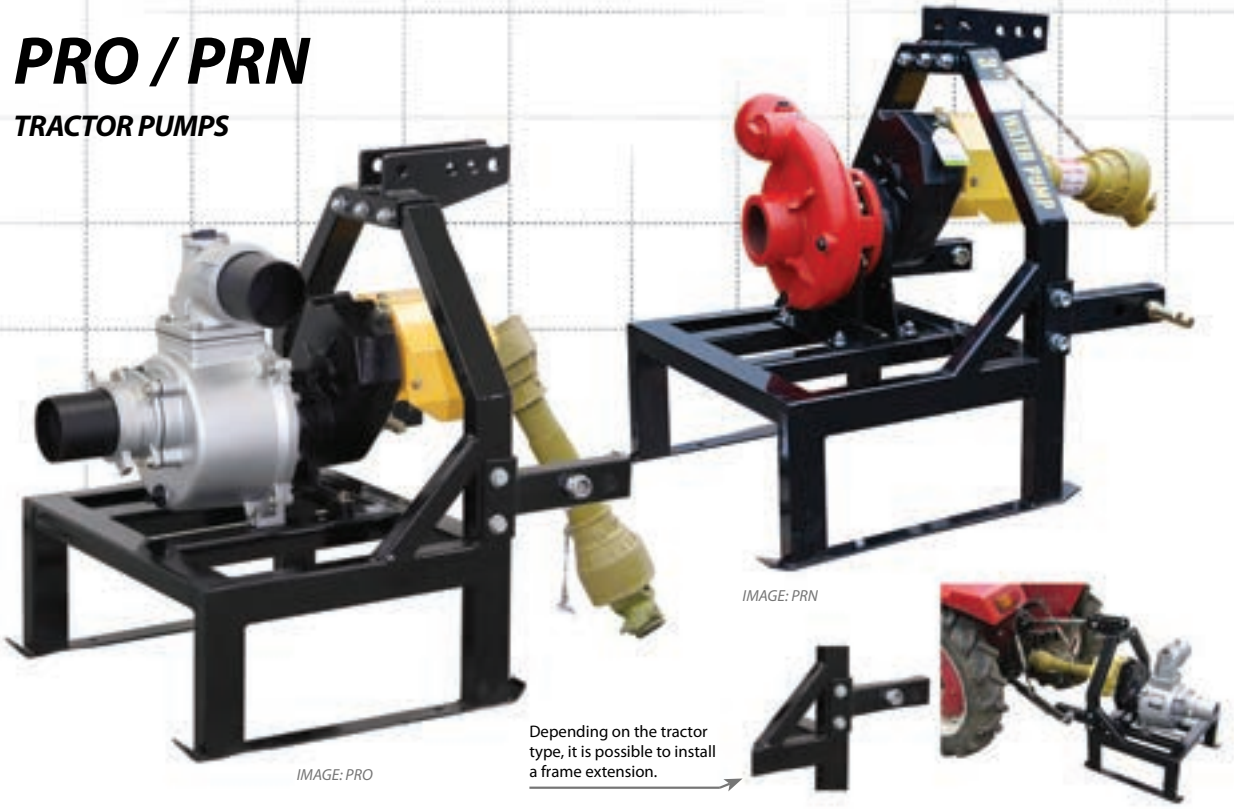

IMAGE: PRO

IMAGE: PRN

Depending on the tractor type, it is possible to install a frame extension.

Tractor pumps mounted on painted steel frames equipped with a three-point suspension system on the tractor.
Depending on the tractor type, it is possible to install a frame extension.
The pumps are driven by a power take-off shaft (PTO). Required tractor PTO shaft revolutions are 540 rpm. Via the PTO shaft (shaft included), the revolutions from the PTO are transferred to a 6.6 gear ratio gearbox that drives the pump. The minimum tractor power required to drive the pump is 15 HP, the maximum 125 HP.

PRO
Single-stage, self-priming PRO tractor pumps are designed for drainage and irrigation. They can pump dirty water (including slurry). The maximum suction capacity of the pump after priming is 7 m. The pumps are ideal for fighting floods.

PRN
Single-stage centrifugal non-self-priming PRN tractor pumps (before starting, the pump and the suction hose must be primed) can be used for pumping water from ponds, lakes, rivers, impounding reservoir and wells, where the water level during pumping does not fall below 6 m from pump inlet. The pumped water must be clean, without solid impurities. The pump is designed to supply water to all types of irrigation systems that require higher pressure. It can be used in vegetable farming, horticulture, tree nurseries and other agricultural production.

The PTO shaft is supplied with the pump.

SPECIFICATION	
TRACTOR POWER DEMAND [HP]	15-125
REQUIRED PTO REVOLUTION [RPM]	540
PTO SHAFT	Diameter: 1-3/8" 6-Spline
REDUCER'S REDUCTION STAGES	Single-stage reduction
REDUCTION RATIO	1 to 6.67
RECOMMENDED GEARBOX OIL	SAE 90 gearbox oil
PTO GREASE	Lithium grease

PRT TRACTOR PUMPS — MADE IN ITALY

Single-stage, centrifugal tractor pumps driven by a power take-off (PTO) shaft, designed to be combined with tractors with 10 HP to 200 HP of power.

The pumps are mounted on a painted, steel frame equipped with a three-point linkage on the tractor. The required PTO revolutions of the tractor are 459 rpm. Through the PTO shaft, the revolutions from the PTO are transmitted to the gearbox which drives the pump.

Pumps from the PRT series are non-self-priming pumps (prior to start-up, the pump must be primed with a suction hose), however, they are equipped with an additional suction system. They can be used in agriculture to supply any irrigation systems which require more pressure, they can be used in vegetable crops, horticulture, nursery, and other agricultural production. In addition, the range of use of the pump includes: pumping water from ponds, lakes, rivers, storage reservoirs and from wells where the water level during pumping does not drop below 6 m from the pump inlet. Pumped water must be clean, free from solid contamination.

Model	Rotor		Inlet		PTO shaft speed RPM	Gear ratio	Pump speed RPM	Performance chart		Tractor power HP

PISTON PUMPS
CLASSIC / DECORATIVE ABYSSINIAN PUMP
SEMI ROTARY PUMP

IMAGE: Baseplate / Classic Abyssynian Pump

IMAGE: Baseplate / Decorative Abyssinian Pump

IMAGE: Semi Rotary Pump

Hand cast iron pumps intended for pumping clean cold water from underground intakes.

The pumps have a simple and durable design with resistance to wear and tear.

Pumping is done by means of a piston with cup leather packing mounted in the pump body. The piston is human-powered via a rod and external lever.

Abyssinian pumps are used mostly in places where electricity is not available. Pumps are available in two versions: classic - green and decorative with ornaments - black.

Both versions are available in sets with cast iron baseplates.

Application (the same for both pumps):
Supply of water from underground intakes to allotments, gardens, and in places where electricity is not available. Due to their attractive design, the pumps can be decorative features in the garden.

TECHNICAL DATA:
- Casting: cast iron
- Piston: cast iron with cup leather packing
- Body: vertical orientation with pressing
- Non-return valve: yes

ADVANTAGES:
- Robust design
- Easy water suction
- Simple design
- Faultless
- Easy installation and removal
- Attractive design
- Cost-free use

K-type cast iron semi-rotary hand pumps designed for pumping clean liquids, such as water, gasoline or diesel fuel. The pumps are mainly used on recreational plots, in gardens, holiday houses and in any other places without electricity or where there is a risk of its failure - the semi-rotary pump can act as an alternative water supply. K-type pumps can also be used as booster pumps for power operated non-self-priming pumps. Maximum suction head of semi-rotary pumps is 7 metres.
All pumps are equipped with a drain plug to drain water in case of potential freezing.
The pump body is mounted with flanges, so it can be easily removed if necessary.

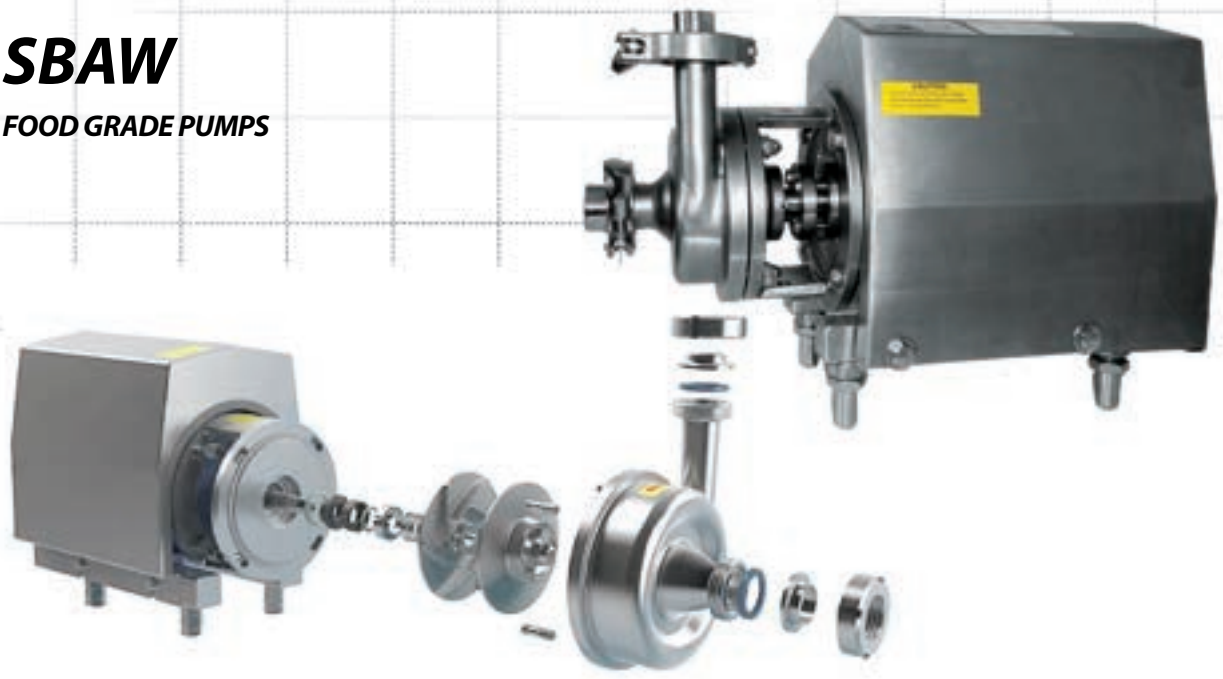
SBAW

FOOD GRADE PUMPS



Pumps designed for transporting concentrated or non-concentrated food liquids with up to 50% dry matter content or other food products with a temperature up to 75°C. Centrifugal pumps with open impeller, enclosed motor, and distanced hydraulic body. Inlet/outlet are complete with connections for easy installation. The device has four adjustable legs. SIC/WC (EPDM) mechanical seal. VMQ body seal/

APPLICATION:

- dairy production sector (fresh and pasteurized milk, whey, ice mixtures),
- fruit processing (nectar juices, clarified juices, fruit and vegetable drinks, wines and fruit liquors),
- alcohol production (mashes, spirits),
- transport of cleaning liquids in CIP systems.

Certificate of Health Quality has been issued for the device by
THE NATIONAL INSTITUTE OF PUBLIC HEALTH – NATIONAL INSTITUTE OF HYGIENE - FOOD SAFETY DEPARTMENT (PZH).

CONIBO
The CONIBO pump is a compact device designed for pumping condensate. The pump is fully automatic. After filling the tank, the pump automatically starts, and after draining the condensate it automatically stops. 3/8 inch diameter and 6 m long transparent discharge hose is supplied with the pump. The pump is suitable for short-time pumping of water at 50°C. The pump can operate with water with pH range from 2.5 to 10. The pump has been designed for faultless operation in professional air conditioning systems. Its most important features are low-noise operation and compact size. The pump is fully automatic and maintenance free, which guarantees comfort of use. The condensate draining cycles are automatic and depend on the condensate level in the tank. The pump is mostly used in applications where condensate flows below the level of its drainage from premises or systems.

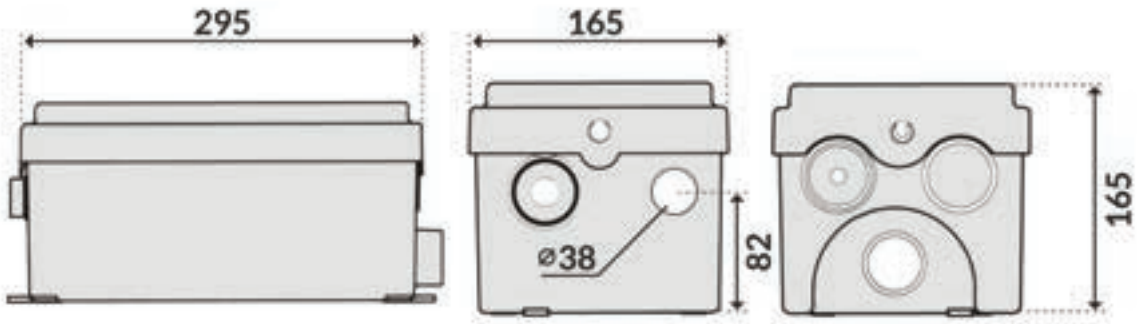
CONAQUA
The CONAQUA pump has a similar design to CONIBO, it also operates in a fully automatic cycle.
The pump is suitable for pumping water at temperatures from 1°C to 25°C. For short time, it can pump water at 50°C, however, the operating time may not exceed 90s, and the stand-by time must be at least 600s. The pump is suitable for pumping condensate to a height of up to 5m and a maximum horizontal distance of 20 m (each elbow and valve must be counted as 1 m discharge height). During installation, horizontal sections should be sloped by 1%. CONI pumps are designed for pumping water condensate from cooling units, air conditioning units and condensing furnaces. The pump is a compact-size device. The pump is fully automatic and maintenance free, which guarantees comfort of use. After filling the tank with condensate, the pump starts automatically, and after draining the condensate it stops automatically until the next cycle. The pump is mostly used in applications where condensate flows below the level of its drainage from premises or systems.

APPLICATION:
Pumping water condensate from cooling units, air conditioning units and condensing furnaces.

PARAMETERS

Name	Lift (m)	Capacity (l/min)	Voltage (V)	Weight (kg)	Motor power / nominal (W)	Dimensions D/H/W (cm)	Tank capacity (l)
CONIBO	4,5	330	230	2,2	80	28/17/13,5	1,9
CONAQUA	5,1	250	230	1,7	58	28/15/13	1,7

AQUASAN MINI



Sanitary pumping station for bathrooms and kitchens.
The pump is similar to the Sanibo mini pumping station. The switch makes the pump a fully automatic device intended for use in bathrooms to drain water from wash basins, shower cabins or from washing machines or sinks installed in kitchens. It is an excellent solution for bathrooms where the wash basins or shower bases are installed outside the stack and riser or below the sewage discharge level. Bathtubs, washing machines, wash basins, shower bases, sinks etc. can be connected to the pumping station.
Its compact size and low-noise makes the pump operation discreet and suitable for installation e.g. in under-sink cabinets.

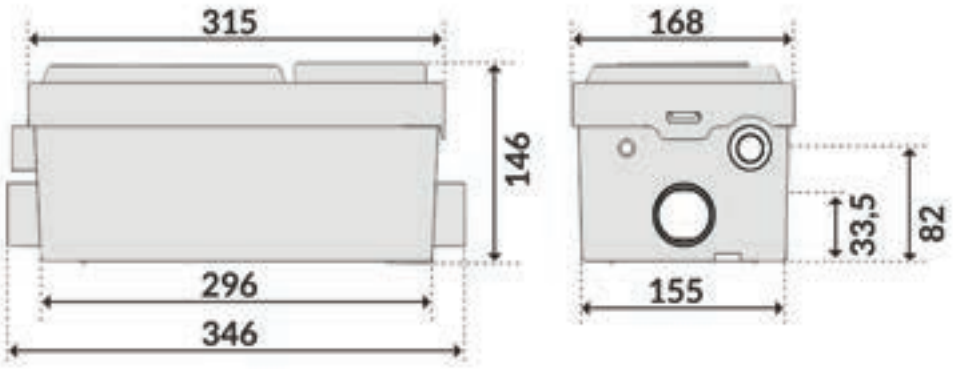
The pump is supplied with:
- End plugs: 2 pcs x 40 mm,
- Stainless steel clamping rings: 3 pcs.

APPLICATION:
Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

PARAMETERS

Name	Lift (m)	Capacity (l/min)	Voltage (V)	Motor power (W)	Dimensions L/H/W (cm)	Weight (kg)	Max. temperature (°C)
AQUASAN MINI	4	40	230	250	30/17/16,5	4	40(90)*

SANIBO MINI

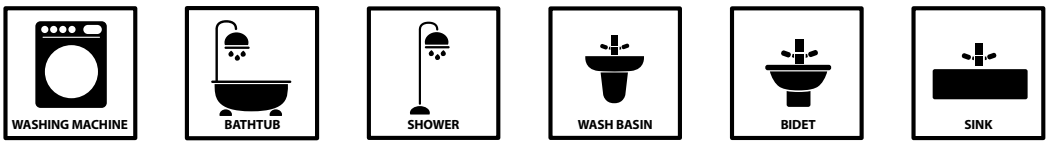


Sanibo mini is a sanitary pump designed for bathrooms and kitchens. The pumping station has one of the most advanced and reliable design available on the market. The pump is fully automatic and intended for use in bathrooms to drain water from wash basins, shower cabins or from washing machines or sinks installed in kitchens. The pump will automatically start when the liquid level is 55mm and stop when it falls to 25mm. It is an excellent solution for bathrooms where the wash basins or shower bases are installed outside the stack and riser or below the sewage discharge level. Bathtubs, washing machines, wash basins, shower bases, sinks, and even bidets can be connected to the pumping station. Its compact size and low-noise makes the pump operation discreet and suitable for installation e.g. in under-sink cabinets. The pump has two inlets for connecting for example shower base and sink.

The pump is supplied with:

- End plugs: 40mm
- 28mm/32mm elbow non-return valve
- Stainless steel clamping rings

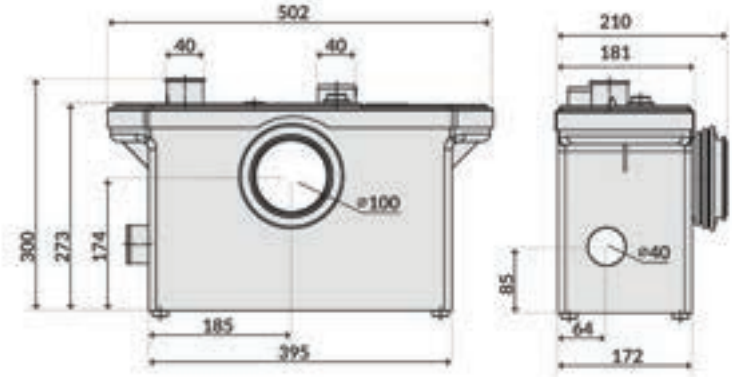
APPLICATION:
Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.



PARAMETERS

Name	Lift (m)	Capacity (l/min)	Voltage (V)	Motor power (W)	Dimensions L/H/W (cm)	Weight (kg)	Max. temperature (°C)	Liquid PH
AQUASAN MINI	6,5	100	230	300	35/15/16	4,5	45	4-10

AQUASAN PRO



As a toilet pump, the Aquasan has been available on the market for many years. It is an economical version of Sanibo series. The pump has three inlets - 100 mm main inlet for toilets, two 40mm for shower bases or wash basins, and one 40mm outlet. It is an excellent solution for bathrooms where the toilet is installed outside the stack and riser or below the sewage discharge level. It has a switch for automatic pump control - the pump automatically stops after filling the device. Additionally, the pump can be started manually.
Its low-noise operation makes the pump ideal for domestic applications. An additional advantage of the device is the ability to pump liquids below 90°C for up to 1 minute.
Bathtubs, toilets, washing machines etc. can be connected to the pumping station, and unused inlets can be closed with end caps.
The pump is supplied with a set of stainless steel clamping rings and end caps, which makes it suitable for various applications.

The set includes:
- WC pump
- End plugs: 2 x small (40 mm), 1 x large (100 mm).
- Clamping rings

APPLICATION:
Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

PARAMETERS

Name	Lift (m)	Capacity (l/min)	Tank capacity (l)	Voltage (V)	Motor power (W)	Dimensions L/H/W (cm)	Weight (kg)	Temp max (°C)	Ingress Protection	Liquid PH
AQUASAN PRO	6,5	140	6	230	600	51x32x22	8,5	50(90)*	IP 44	4 - 10

SANIBO 1

The Sanibo 1 WC pump is a fully automatic device designed for draining sewage from toilets, wash basins and sinks. Its low-noise operation makes the pump ideal for domestic applications. Sanibo 1 has a three-blade impeller
with six cutting edges that perfectly fight impurities that enter the pump. Additionally, the pump has three inlets - 100 mm main inlet for toilets, two 40mm for shower bases or wash basins, and one 40mm outlet. It is an excellent solution for bathrooms where toilets are installed outside the stack and riser or below the sewage discharge level. It has a switch for automatic pump control - the pump automatically stops after filling the device. Additionally, the pump can be started manually.
An additional advantage of the device is the ability to pump liquids below 90°C for up to 2 minutes. Due to the 7 metre head vertically and 70 metre horizontally, there is no need for gravity sewage disposal. Its operating cycle is approx. 8 seconds.
The pump is supplied with a set of stainless steel clamping rings and end caps, which makes it suitable for various applications.

The set includes:

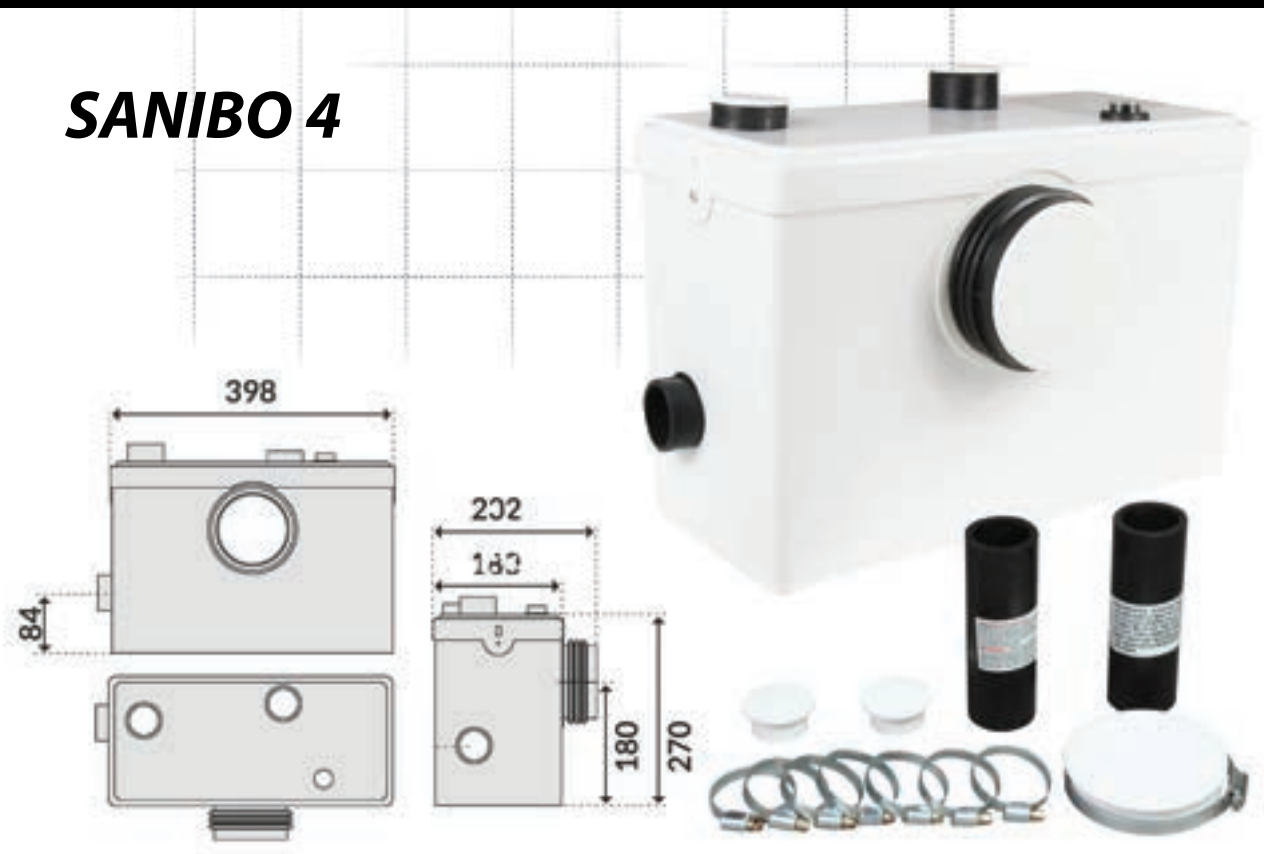
- WC pumps with cutting system
- End caps: x 2 (40mm), x 1 (100mm).
- Non-return valves x 2
- Clamping rings

APPLICATION:
Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

PARAMETERS

Name	Lift (m)	Capacity (l/min)	Tank capacity (l)	Voltage (V)	Motor power (W)	Dimensions L/H/W (cm)	Weight (kg)	Temp max (°C)	Ingress Protection	Liquid PH
SANIBO 1	7	120	6	230	600	51x32x22	8,5	60 (90)*	IP 44	4 - 10

SANIBO 4



SANIBO 4 is a high quality fully automatic toilet pump for pumping sewage, equipped with three inlets for draining sewage from toilets and wash basins/sinks - one main 100 mm inlet for toilets, 40mm for shower bases or wash basins, and one 40mm outlet. It has a switch for automatic pump control - the pump automatically stops after filling the device. Additionally, the pump can be started manually.
Its low-noise operation makes the pump ideal for domestic applications. Long blades used in the Sanibo 4 impeller provide increased pump flow up to 300 l/min.
and excellent performance when dealing with impurities flowing into the pump. An additional advantage of the device is the ability to pump liquids below 90°C. Due to the 9 metre head vertically and 90 metre horizontally, there is no need for gravity sewage disposal. Its operating cycle is approx. 6 seconds.

The set includes:

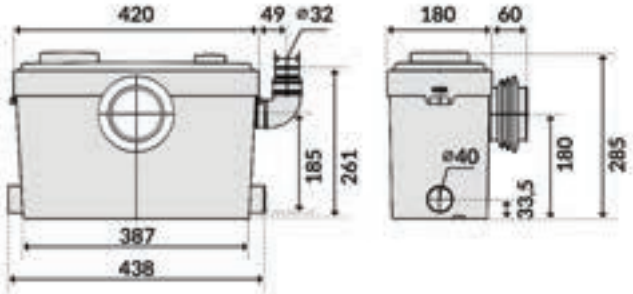
- WC pump
- End caps: x 2 (40mm), x 1 (100mm).
- Non-return valves x 2
- Clamping rings x 8

APPLICATION:
Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

PARAMETERS

Name	Lift (m)	Capacity (l/min)	Tank capacity (l)	Voltage (V)	Motor power (W)	Dimensions L/H/W (cm)	Weight (kg)	Temp max (°C)	Ingress Protection	Liquid PH
SANIBO 4	9	300	6	230	600	51x32x22	9,5	90	IP 44	4 - 10

SANIBO 5



Bathroom sewage pumping station. Many years of experience allowed us to design a top quality device for a wide range of applications. The main application of the pump is to remove sewage from toilets, however use of three inlets allows to collect sewage from, e.g. bath, washing machine and toilet - one main 100 mm inlet for toilets, 40mm for shower bases or wash basins, and one 40mm outlet. The pump is exceptionally quiet so it is an ideal solution for domestic applications. SANIBO 5 is equipped with end caps to cover unused inlets. The pump can also be used in kitchens or laundry rooms, without connecting to the toilet. It has a float switch for automatic pump control - the pump automatically stops after filling the device. Additionally, the pump can be started manually. An additional advantage of the device is the ability to pump liquids of up to 40°C (short-term 60°C) for up to 2 minutes. Due to the 9.5 metre head vertically and 100 metre horizontally, there is no need for gravity sewage disposal. Its operating cycle is approx. 8 seconds. Sanibo 5, as the only branded pump available on the market has stainless steel motor housing, strainer and cutting system providing for guaranteed reliability,
and a powerful pump motor is provided with built-in thermal protection. The device is designed according to the most demanding European standards.

The set includes:

- WC pumps with cutting system
- End caps: x 2 (40mm), x 1 (100mm).
- Non-return valves x 1
- Clamping rings x 8

WATCH THE PUMP OPERATION AND DESIGN ON:
http://bit.ly/sanibo

APPLICATION:
Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system
- basements, attics and other rooms converted for sanitary purposes. Water and sewage pumping in places where toilets, wash basins or shower bases are installed outside the stack and riser or below the sewage discharge level.

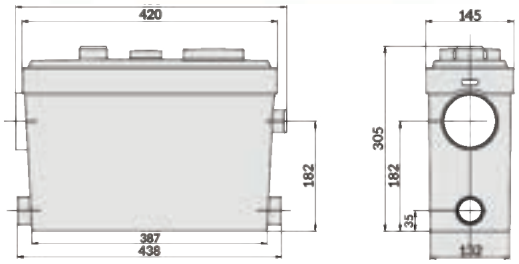
PARAMETERS

Name	Lift (m)	Capacity (l/min)	Tank capacity (l)	Voltage (V)	Motor power (W)	Dimensions L/H/W (cm)	Weight (kg)	Temp max (°C)	Ingress Protection	Liquid PH
SANIBO 5	9,5	150	6	230	600	44x29x24	8,5	40 (60)*	IP 44	4 - 10

SANIBO 6



Sanibo 4 pump is a new version of the most popular SANIBO 5 pumping station. Also, it is the highest quality automatic pumping and cutting system equipped with three inlets for removing sewage - one main 100 mm inlet for toilets, two 40mm inlets for shower bases or wash basins, and one 40mm outlet. Ingress protection increased to IP 55 is an important improvement.
The pumps has a switch for automatic pump control - the pump automatically stops after filling the device. The pump is exceptionally quiet, so it is an ideal solution for domestic applications.
An additional advantage of the device is the ability to pump liquids of up to 40°C (short-term 60°C) for up to 2 minutes. Its operating cycle is approx. 8 seconds.

SANIBO 6, along with SANIBO 5, as the only branded pumps have stainless steel motor housing, strainer and cutting system for guaranteed reliability.
The pump motor is provided with built-in thermal protection.

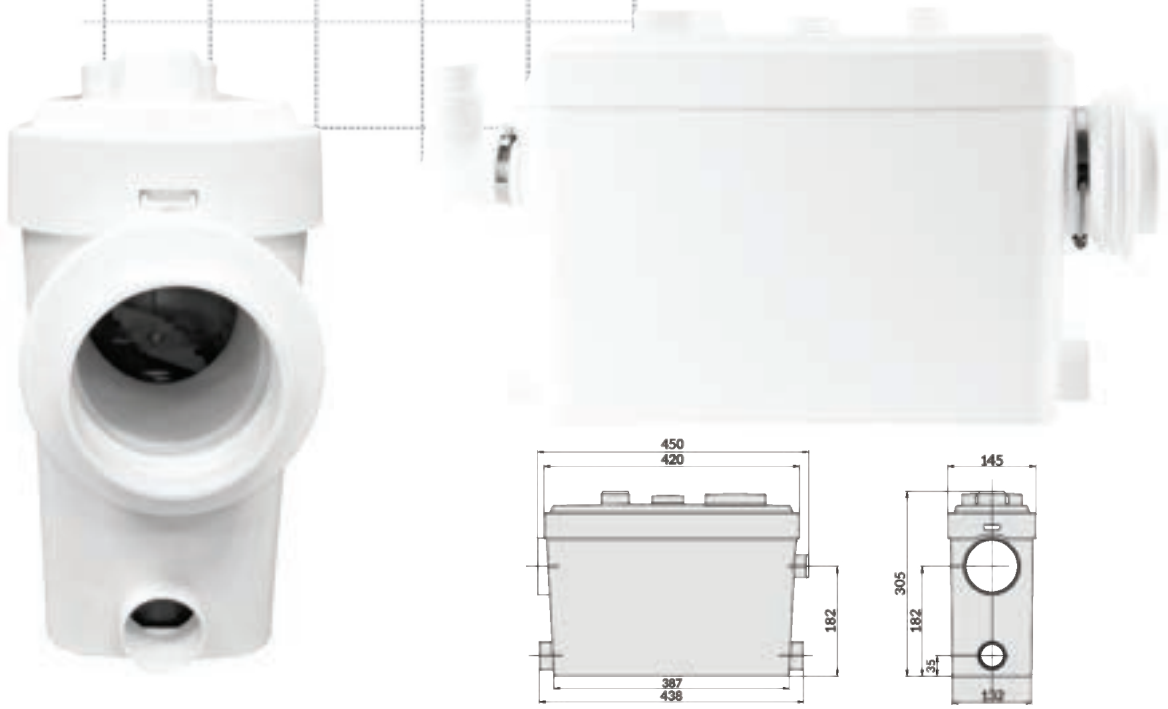
The set includes:
- WC Pump
- End caps: x 2 (40mm), x 1 (100mm)
- Non-return valves x 2
- Clamping rings x 8

APPLICATION:
Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

PARAMETERS

Name	Lift (m)	Capacity (l/min)	Tank capacity (l)	Voltage (V)	Motor power (W)	Dimensions L/H/W (cm)	Weight (kg)	Temp max (°C)	Ingress Protection	Liquid PH
SANIBO 6	9,5	150	6	230	600	51x32x22	9,5	90	IP 44	4 - 10

SANIBO B



SANIBO B is a toilet pump and cutting system with side inlet. The main application of the pump is to remove sewage from toilets, however, use of three inlets allows to collect sewage from, e.g. bath, washing machine and toilet - one main 100 mm inlet for toilets, two 40mm for shower bases or wash basins, and one 40mm outlet. The pump is exceptionally quiet, so it is an ideal solution for domestic applications. Due to its narrow design, SANIBO B is a perfect solution for concealed frames.
The pump has a float switch for automatic pump control - it is the same system as used in SANIBO 5 and 6 pumping stations. An additional advantage of the device is the ability to pump liquids of up to 40°C (short-term 60°C) for up to 2 minutes. Due to the 9.5 metre head vertically and 100 metre horizontally, there is no need for gravity sewage disposal. Its operating cycle is approx. 8 seconds. SANIBO 5, as the only branded pump available on the market, has stainless steel motor housing, strainer and cutting system for guaranteed reliability, and a powerful pump motor is provided with built-in thermal protection. The device is designed according to the most demanding European standards.

The set includes:
- WC pump with cutting system
- End caps: x 2 (40mm), x 1 (100mm)
- Non-return valves x 1
- Clamping rings x 8

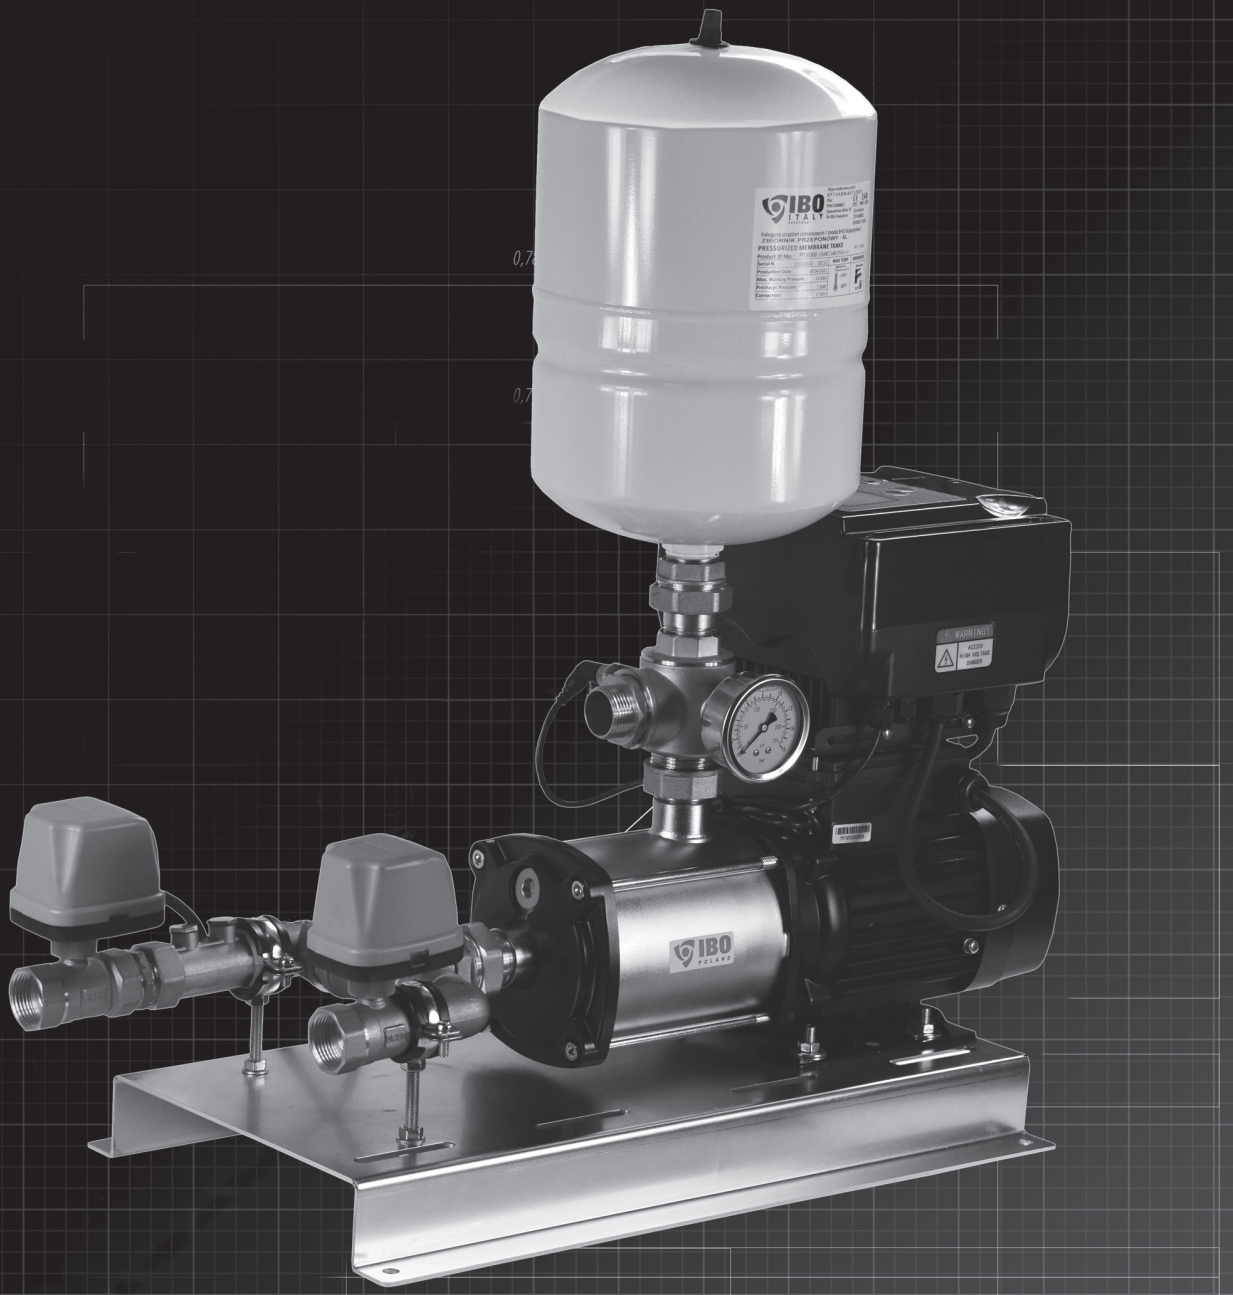
APPLICATION:
Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes. Water and sewage pumping in places where toilets, wash basins or shower bases are installed outside the stack and riser or below the sewage discharge level.

PARAMETERS

Name	Lift (m)	Capacity (l/min)	Tank capacity (l)	Voltage (V)	Motor power (W)	Dimensions L/H/W (cm)	Weight (kg)	Temp max (°C)	Ingress Protection	Liquid PH
SANIBO B	6,5	125	4	230	450	45x31x15	6,5	40 (60)*	IP 55	4 - 10

RAIN SYSTEM

IBO RAIN SYSTEM



IBO RAIN SYSTEM

rainwater pumping set

IBO | rainsystem

Automatic pumping set designed for water intake from multiple sources using a single pump with simultaneous replenishment of the source via the water mains in case of lack of water in the tank. Thanks to the use of floats and electro-valves and a computer controlling the entire system, the entire process of water intake, tank change and its replenishment with municipal water takes place automatically.

Basic features of IRS sets:

One pump - multiple sources
The pump included in the IRS set can draw water from one, two or even three different tanks located on the same plot of land.

Automatic change of water intake source
A float included in the set continuously monitors the water level in the tank from which the IRS draws water. When the water level approaches the bottom of the tank, the float sends a signal to the solenoid valve, which changes the source of water intake or, as a last resort, opens the valve that replenishes the rainwater tank with water from the mains water supply or a deep well.

Automatic pump operation
The applied controllers - IBOPRESS10 and IVR10 - control the pump on the basis of the pressure prevailing in the network. The controllers switch the pump on when the pressure drops (turning on the tap in the garden - starting watering, flushing the toilet, starting the washing machine) and switch it off when the pressure rises (turning off the tap).

Suction capacity of the pump up to a depth of 7 metres
The pumps used in IRS sets are self-priming devices, which means that they can draw water from sources below where the pump is installed. This parameter gives you the possibility to draw water not only from rainwater tanks, but also from wells with the water table falling to a maximum depth of 7 metres from the place where the pump is installed. An additional advantage of the pumps used in the sets is their ability to self-deaerate the system in suction.

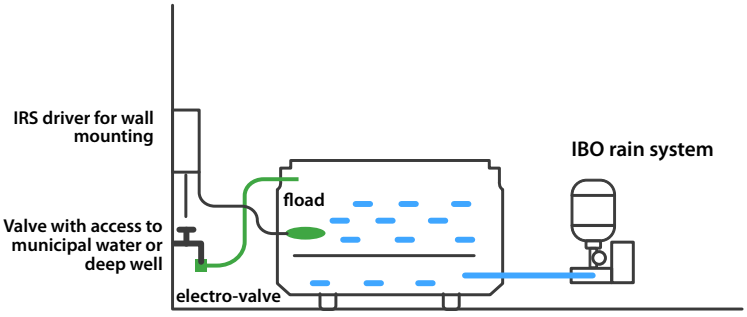
Eco-friendly
Drawing water from multiple sources with a single pump gives you the opportunity to store large amounts of rainwater in several tanks, minimising the use of municipal water. The water supply network is only activated when there is no water in all available reservoirs. In addition, the PRO version of the device is equipped with a frequency converter, thanks to which current consumption is reduced by up to 60%.

The system proposed in the IRS sets for refilling the tanks with municipal water complies with the PN-EN 1717 standard.

IRS sets consist of:
- High-quality **IPRO self-priming pumps** guaranteeing trouble-free operation for many years of use;
- **Pump controller** for automatic operation of the system;
- **The electro-valves**, 20 m floats and controller - the system is programmed and ready to go;
- Mounting plate.

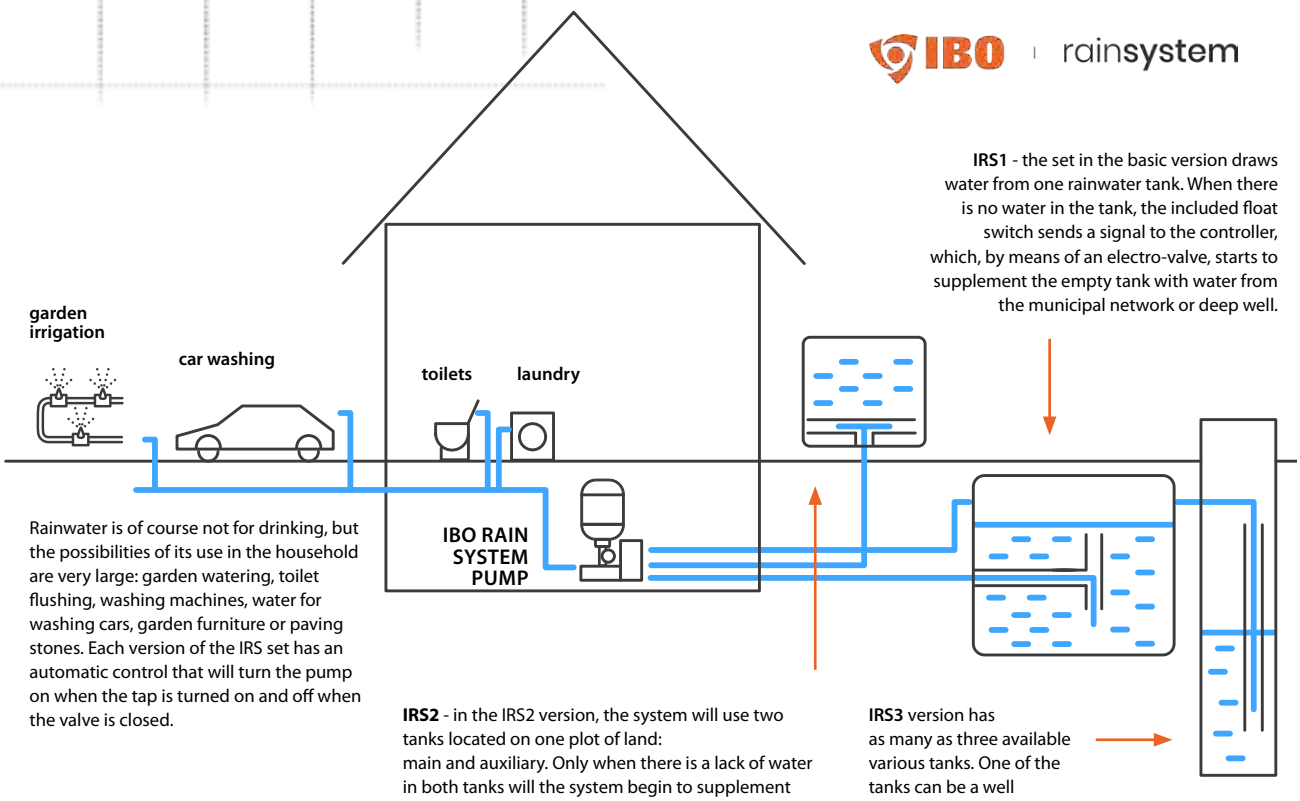
fot. IBO RAIN SYSTEM 2 (wersja ze sterownikiem IBOPRESS10)

fot. IBO RAIN SYSTEM 2 PRO (wersja z falownikiem IVR 10)



The rainwater tank is topped up using an electro-valve and a garden hose connected to it. The solenoid valve is screwed directly into a valve with access to municipal water or from a deep well. A float installed in the tank will be responsible for opening and closing the solenoid valve. On the controller that connects the float to the solenoid valve you will see two LEDs: red - no rainwater, mains open and green - tank full, mains closed.

IBO | rainsystem



IRS1 - the set in the basic version draws water from one rainwater tank. When there is no water in the tank, the included float switch sends a signal to the controller, which, by means of an electro-valve, starts to supplement the empty tank with water from the municipal network or deep well.

Rainwater is of course not for drinking, but the possibilities of its use in the household are very large: garden watering, toilet flushing, washing machines, water for washing cars, garden furniture or paving stones. Each version of the IRS set has an automatic control that will turn the pump on when the tap is turned on and off when the valve is closed.

IRS2 - in the IRS2 version, the system will use two tanks located on one plot of land: main and auxiliary. Only when there is a lack of water in both tanks will the system begin to supplement one of them with municipal water or a pump installed in a deep well.

IRS3 version has as many as three available various tanks. One of the tanks can be a well vertebrate with a water table not falling below 7 meters from the surface.

The sets are available in several configurations. When selecting a set, it is important to consider:
- the number of tanks from which the system is to draw water
- pump capacity - this should be matched to the amount of water stored or the demand of the garden irrigation system
- type of control: IBOPRESS automation or IVR10 frequency converter; the frequency converter is ideal for pumps with higher capacity (HP1500INOX)

PARAMETERS

Set Type (numbers = tanks quantity)	*Pump type*	*Q – max*	*H – max*	*Engine power*	*Power supply power consumption*	*Type of control*

Professional pump protections

The M121 and M131 Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of deep well pumps, submersible pumps and surface pumps:

- M-121 for single-phase pumps from 0.75 kW to 2.2 kW (from 1 HP to 3 HP)
- M-131 for 3-phase pumps from 0.75 kW to 4kW (from 1 HP to 5 HP)
  5.5 kW - 7.5 kW (from 7.5 HP do 10 HP).

IMAGE: M31

CONTROLLER OPERATING FUNCTIONS

- Automatic re-start attempt after emergency stop enforced by one of the protection functions. Different self-activation timers for different emergency conditions.
- Possibility to calibrate the controller and change its calibration to match the pump parameters.
- Activating and deactivating the pump depending on:
  - water levels in the tank from which water is pumped,
  - water levels in the tank to which water is pumped,
  - pressure in the tank to which water is pumped.
- Manual or automatic operating mode.

CONTROLLER PROTECTION FUNCTIONS

- Double dry run protection by means of:
  - Liquid level probes/ sensors
  - Analysis of current consumption during pump operation
- Overload protection
- Phase failure protection (M31)
- Voltage drop protection
- Voltage surge protection
- High voltage protection
- Short circuit protection
- Overvoltage protection

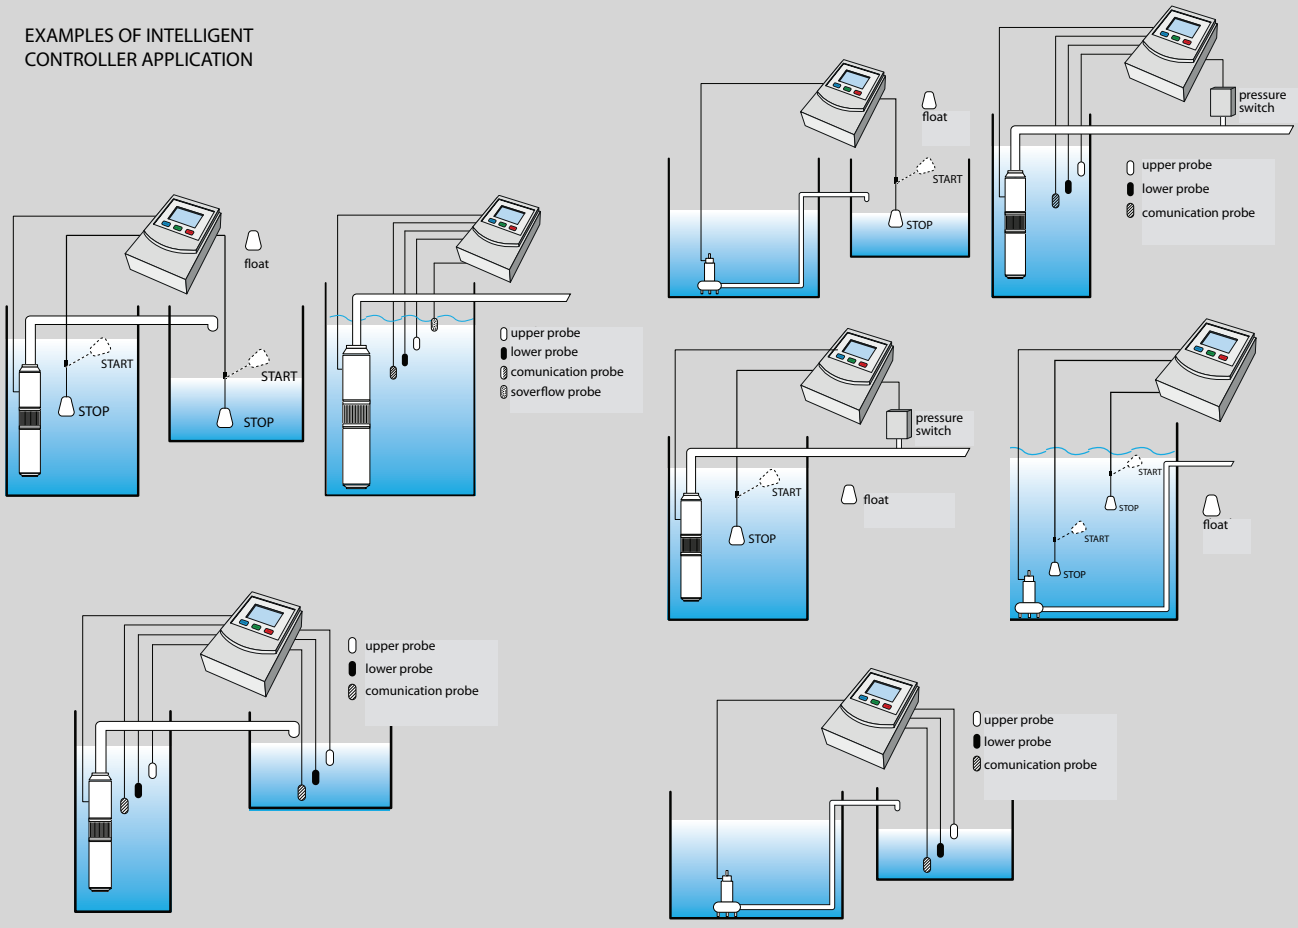
M21/ M31

OPTIONS:

In addition to the M121 and M131 controller, M-21 and M-31 controllers are available with additional features, such as:

- Displaying of total pump operation time
- Displaying history of the last five failures when the protections have been activated
- Dynamic LCD screen displaying the current status of the pump.

EXAMPLES OF INTELLIGENT CONTROLLER APPLICATION



IBOPRESS 10

A series of electronic pressure switches for controlling the pump operation and protecting it against overload and dry run.

The IBOPRESS is a device used for control of operation of any pump type. Depending on the pressure in the system, it switches the pump on or off. The on and off pump pressure can be set.

The IBOPRESS is a cutting-edge electronic controller whose operation is based on a ceramic pressure sensor.

All IBOPESS models have protection functions: it allows setting the maximum current consumption by the pump and protecting it against overload. It is possible to set the minimum pressure at which the controller will switch the pump off, protecting it against a dry run.
The IBOPRESS 10 and IBOPRESS 30 devices have an automatic restart function after an emergency shutdown after the set time.

The IBOPRESS 10 and SX switches are used to control the single-phase pumps and are equipped with a cable with a plug and the second cable with an electric socket allowing a very easy connection to the pump control system. The IBOPRESS 30 has an additional cable with a pressure sensor and is used to control the operation of three-phase pumps. High measuring accuracy allows the device to be installed in systems that require constant, unchanging operating conditions.

DIG-IBO 1

DIGIBO 1

Intelligent pressure switch for pump operation control. DIG - IBO is an electronic device with two main functions:

- PUMP OPERATION CONTROL (cut-in and cut-out pressure can be set from an electronic display panel)
- DRY RUN PROTECTION AGAINST (if the function is active and the pump operates without water for more than 20 seconds, the device will stop the pump. Dry run protection is active by default - if for any reason, the user does not want to leave this function active, it can be disabled by pressing and holding buttons 2 and 4 together for 3 seconds - "F0" (function disabled) or F1 (function enabled by default) will be displayed on the panel. If no operation is performed within 3 seconds, data will be automatically saved and the device will return to the operating mode.

The controller activates the pump when water pressure in the water system drops below the minimum pressure set on the display, and water starts flowing in the pipe on which the controller is installed. When no flow is detected by the controller, the pump will be stopped.

TECHNICAL DATA

- Operating range 0-10 bar
- Supply voltage: 230V, 50Hz
- Ingress Protection: IP66
- Maximum pump power: 1.5kW
- Maximum water temperature: 80 °C

Cut-out pressure setting - H Cut-in pressure setting - L

Use the buttons (arrow) to set the limit, the up arrow - to increase, the down arrow - to decrease. When finished, the switch will save the settings automatically and return to the operating mode.

HYDRO-BLOCK (SK-13)

HYDRO-BLOCK (SK-13)

Devices protecting the pump against damage caused by dry running. The device will automatically stop the pump if the water pressure in the system drops below the cut-out level - 0.7 bar. The device has the RESET button. The pump is first activated by pressing the RESET button. When the system pressure exceeds 1.1 bar, the device will start operating in automatic mode. The device should operate in water supply systems with a pressure tank. The device can be directly connected to single-phase motor pumps. It can be connected three-phase motor pumps via a contactor.
The device is suitable for surface pumps only. Warning!!! The HYDRO-BLOCK pressure controller cannot be used instead of a pressure switch.

PC-13

PC-15

PC-59

AUTOMATIC PUMP CONTROLLERS

PC-13

The PC-13 automatic pump controller provides start and stop control functions. The automatic pump controller starts the pump when water pressure in the water system drops below the minimum pressure set on the automatic pump controller, and when water starts flowing in the pipe on which the PC-13 is installed. The controller stops when water flow in the pipe on which the PC controller is installed is stopped. The controller starts the pump when a tap or sprinklers are opened, and stops the pump when they are closed. The controller has a dry-run protection function (pump operation without water). If no water is detected, the controller will stop the pump to protect it against damage. The controller can be connected directly to pumps with motor electrical demand not greater than 10 A (16 A at starting). The controller protects the system against flooding resulting from minor leaks. Leaks cause pressure drops in the system, but the controller will not start because it does not detect water flow (with small leaks, the water flow is insignificant). The device is supplied with a 1 m long cable with a plug and a 60 cm long cable with a socket.

PC-15

Automatic pump controller for up to 1300 W surface and deep well pumps. It can be used instead of a pressure switch and pressure tank. When the tap is opened, a signal is sent to the PC-15 controller and it starts the pump. When the tap is closed, the PC-15 controller stops the pump. The automatic pump controller can operate with single-phase pumps with current draw not exceeding 10A during operation. The device is supplied with dry run protection. When no water is detected in the well, the device will stop the pump. The device is equipped with a 60 cm long cable for connection with the pump and a 1 m long power cable with a plug. The PC-15 automatic pump controller is equipped with 1" inlet and outlet.

PC-59

The PC-59 controller is an electronic device for pump control.
It controls the pump operation by monitoring pressure changes in the pipeline and the water flow through the pipeline. With user-adjustable cut-in and cut-out pressure, the device can be used instead of traditional pressure switches. It also protects against dry running. A built-in non-return valve prevents water backflow to the pump. The pressure gauge with marked cut-in and cut-out pressure levels provides accurate and easy adjustment of the device according to user requirements. The device can operate with and without a pressure tank. The PC-59 automatic pump controller is equipped with 1" inlet and outlet. The device is supplied with a 60 cm long cable for connection with the pump and a 1 m long power cable with a plug.

AUTOMATIC PUMP CONTROLLERS

SK-15

Automatic pump controller for surface and deep well pumps.
It can be used instead of a pressure switch and pressure tank. When the tap is opened, a signal is sent to the SK-15 controller and it starts the pump. When the tap is closed, the SK-15 controller stops the pump. The automatic pump controller can operate with up to 1300 W single-phase pumps with current draw not exceeding 10A during operation. The device is supplied with dry run protection. When no water is detected in the well, the device will stop the pump. The SK-15 automatic pump controller is equipped with 1" inlet and outlet. The device is supplied with a 1 m long cable with a plug and a 60 cm cable with a socket.

PC-10P

Automatic pump controller for surface and deep well pumps. It can be used instead of a pressure switch and pressure When the tap is opened, a signal is sent to the PC-10P controller and it starts the pump. When the tap is closed, the PC-10P controller stops the pump. Compared to the other device, this automatic pump controller can operate with up to 2200 W single-phase pumps with current draw not exceeding 16 A during operation. The device is supplied with dry run protection. When no water is detected in the well, the device will stop the pump. The PC-10P automatic pump controller is equipped with 1" inlet and outlet. The device is supplied with a 1 m long power cable with a plug and a 60 cm long cable with a socket for connection with the pump

PC-20P

Flow switch equivalent to PC-10P but equipped with 1 ¼ "connections

PC-30P

PC-30P - an analogous device for the PC-20P equipped with the automatic restart function

PC-16

Automatic pump controller for surface and deep well pumps.
It can be used instead of a pressure switch and pressure tank. When the tap is opened, a signal is sent to the PC-16 controller and it starts the pump. When the tap is closed, the PC-16 controller stops the pump. The automatic pump controller can operate with up to 1300 W single-phase pumps with current draw not exceeding 10A during operation. The device is supplied with dry run protection. When no water is detected in the well the device will stop the pump. Compared to other controllers, the PC-16 has the restart function. The PC-16 has an automatic restart function. The device makes attempt to automatically restart the pump after stopping caused by dry running. If no water flows into the well, the device will stop the pump again. The cycle will be repeated several times a day from the first activation of the pump. This solution is best suited for automatic irrigation.
Easy-to-install. Supplied with a 1 m long power cable with a plug and a socket for connecting the pump. The PC- 16 automatic pump controller is equipped with 1" inlet and outlet.

PRESSURE SWITCHES

HYDRO-BLOCK (SK-13)

Devices protecting the pump against damage caused by dry running. The device will automatically stop the pump if the water pressure in the system drops below the cut-out level - 0.7 bar. The device has the RESET button. The pump is first activated by pressing the RESET button. When the system pressure exceeds 1.1 bar, the device will start operating in automatic mode. The device should operate in water supply systems with a pressure tank. The device can be directly connected to single-phase motor pumps. It can be connected three-phase motor pumps via a contactor.
The device is suitable for surface pumps only. Warning!!! The HYDRO-BLOCK pressure controller cannot be used instead of a pressure switch.

Pressure switches are designed for automatic starting and stopping booster sets with surface and deep well pumps equipped with electric motors.

The switches control the operation of the devices depending on the cut-in and cut-out pressure settings.

Switch body is made of durable plastic with copper or silver contacts. Depending on the model, the switches have different values of possible operating modes in a specified pressure range.

The PC-2 switch is additionally equipped with a pressure gauge and its design is based on a five-way discharge outlet so it can be used as a complete booster set fitting. PC-2 has 1" inlet and outlet.

The LCI and LCA switches can be used with 400 V ~ 3/50 Hz three-phase AC motors. In addition, the LCI is available with a nipple with 1/2" outer thread.

LCA switches are made by Polish manufacturer of pumps in Grudziądz

SOLENOID VALVES

VT series solenoid valves are suitable for controlling water flow in irrigation, heating and air conditioning systems. The solenoid consists of a ball valve and an actuator. The actuator is driven by a synchronous motor that controls the operation of the ball valve with rotation up to 90 degrees. The ball valves are available in two-way versions with diameters DN15, DN20 and DN25. The actuators are equipped with an indicator of open/close position.

SCOPE:

- 3 different connection diameters
- Use in various types of water installations
- High quality product
- Warranty: 24 months
- Warranty and post-warranty service

TECHNICAL DATA:

- Electric driver equipment: AC 220-240V / 50Hz
- Power consumption: 6W (when the valve is open or closed)
- Motor type: synchronous motor
- Open/closed position switching time: 6~15s
- Operating pressure 1.6Mpa
- Closing differential pressure: < 0,2Mpa
  Ambient temperature < 40°C
- Isolation class: IP54
- Temperature of the medium: 2-80°C
- Casing material: PA
- Medium: Cold/warm water or ethylene glycol solution 50%

IMAGE: Assembly adhesive

ASSEMBLY ADHESIVE FOR FITTINGS

The adhesive for sealing all connections and joints between metal parts.

IMAGE: Float switch

FLOAT SWITCHES

Electromechanical switches for controlling electrical equipment operation that depends on the liquid level. The switches are made of durable plastic and rubber electric wire (H07RN-F). The float switches are supplied with 60 cm, 5 m (with weight), and 10 m (with weight) power cables.

IMAGE: Flange

FLANGE

Galvanized steel spare part for pressure tanks

IMAGE: Membrane

MEMBRANES

EPDM synthetic rubber membranes for pressure tanks. The membrane separates water and air part of the tank.
The membranes are made in Italy in accordance with the most demanding European. All membranes are certified for food contact.
Sizes available: 24 L, 35 - 50 L, 80 L, 100 L, 150 L.

IMAGE: Couplings

COUPLINGS

Aluminium couplings for connecting hoses.

IMAGE: Control box

CONNECTORS

Aluminium connectors for connecting pumps with hoses

CONTROL BOXES

Enclosed plastic control box for starting single-phase motors. The boxes have a built-in capacitor, over-current protection and a cable with a plug. Depending on type, the boxes are intended for 0.75kW/ 1.1kW/ 1.5kW/ 2.2kW 230V ~ / 50Hz motors.

Name	Capacitor	Protection
0,75kW	35uF	8A
1,1kW	40uF	11A
1,1kW	45uF	12A
1,5kW	55uF	14A
1,5kW	60uF	15A
2,2kW	70uF	20A
2,2KW	80uF	20A

IMAGE. Pump fittings

PUMP FITTINGS

Fittings available in cast iron or steel in sizes 1 ½" and 2 "

FILTERS - HOUSINGS / CARTRIDGES

In-line filters for purification and treatment of water from own intakes and water supply networks. Universal filters made of durable materials to guarantee long-term and faultless operation. Each housing is equipped with a clamp wrench. Available types of cartridges: ceramic, carbon,
mesh, string wound and foam. Housings and cartridges are available in sizes of 5/2.5"and 10"/2.5".

Depending on the system requirements, the housings have the following inlets/ outlets: 1"/3/4"/1/2".

Application: Households

TECHNICAL DATA	
Mesh filter	Mesh filter cartridge for filtering mechanical impurities, such as sand, rust and various types of sediments found in water.
String wound	String wound filter cartridge for filtering mechanical impurities. The cartridges are made of polypropylene string. Degree of filtration - 5um.
Ceramic filter	Ceramic filter cartridge for filtering mechanical impurities, such as sand, rust and various types of sediments found in water. Higher filtration accuracy compared to string and foam filters.
Foam filter	Foam filter cartridge for filtering mechanical impurities, such as sand, rust and various types of sediments found in water. Degree of filtration - 5um.
Carbon filter	Carbon filter block cartridge. Filter designed to reduce chemical compounds. It Improves the taste of water and removes any unpleasant odours

Features:

- Housing made of reinforced polypropylene;
- Two O-rings to ensure leak-tightness;
- The transparent housing for visual assessment of contamination;
- Complete with clamp wrench and mounting bracket:
- Max. pressure 8 bar;
- Temperature range 2- 45°C.

Available sizes make the housings suitable for most standard cartridges.
Our housings are suitable for the following cartridges:

- mechanical cartridges: foam and string;
- reusable mechanical cartridges: mesh;
- Active cartridges: carbon block, carbon granulate, softening and ceramic.

APPLICATION:

- mechanical cartridges: main water supply pipes in apartments and small houses;
- carbon and softening cartridges: single water intake points, such as taps.

SAND FILTERS

Filters designed to remove mechanical impurities with minimum particle size of 120 microns. The filter is usually installed downstream the water supply point upstream the main water intake in the building.

These filters are often installed with surface pumps in order to protect the hydraulic components against abrasive mechanical impurities.

The disk cartridge protects against mechanical impurities such as sand and dust, but not against water deposits such as iron.

The main advantage is the durable design so both the housing and the cartridge can be used for many years. The filters have reusable cartridges that should be cleaned, e.g. by rinsing - the cartridge can be removed and rinsed under pressure.

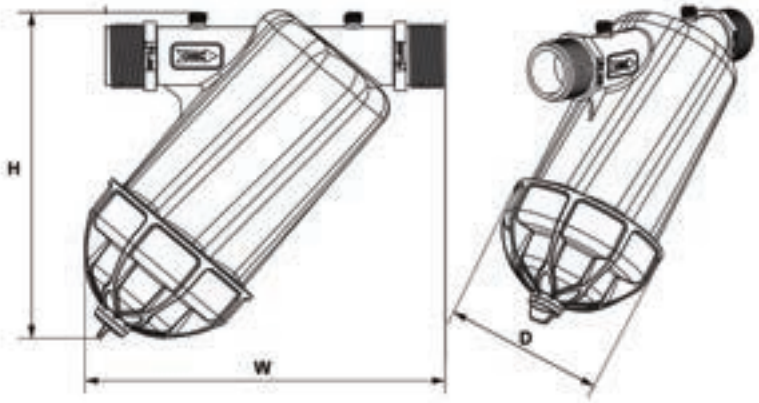
The housing is made of impact and chemical resistant plastic.

Disk and mesh filters are used in agriculture, irrigation, gardening and domestic use to protect the pump and water supply system against contamination.

In addition to disk cartridges,
mesh cartridges are available upon request.

FEATURES AND ADVANTAGES

- Compact size
- Micron rating precise filtration
- Chemical resistance
- Drain valve
- High efficiency
- Durability



Name	Q max	Max. pressure	Filtration	Filtration area	Dimensions(mm)
¾" Disc Filter	75 l/min	8bar	120	160	130/ 176/ 83
1" Disc Filter	100 l/min	8bar	120	160	173/ 190/ 89
1 ¾" Disc Filter	200 l/min	8bar	120	265	230/ 250/ 120
1 ½" Disc Filter	200 l/min	8bar	120	265	230/ 250/ 120

UV STERILIZERS

UV sterilizers are used to purify/disinfect water from bacteriological contamination that may exist in water sources, e.g. shallow wells or surface intakes. Disinfection is based on the bactericidal effect of the UV lamps in the sterilizer. The principle of their bactericide action is the absorption of UV light by the DNA structures of microorganisms. Proper selection of UV rays strength and exposure time can kill almost all microorganisms by destroying their DNA.

Water treatment with UV Irradiation is one of the most effective and safest methods of water purification because water is not purified by chemical compounds. Another advantage is the lack of influence on water taste and smell. Depending on the water demand, sterilizers can be equipped with 1 to up to 8 lamps. Lamps used in IBO sterilizers are manufactured by Philips and their service life is 8000h. The smallest sterilizers are designed for 1 l/min. flow, the largest available on request for flow up to 3600l/min. When using sterilizers with UV lamps, it is important to leave the lamps on even if there is no water flow because frequent on/off switching significantly reduces their life.

It should be remembered that the efficiency of the sterilizer depends largely on the quality of the water that flows through it, so we recommend to install in-line filters upstream the sterilizer to remove any mechanical impurities, such as sand. Moreover, the iron content and water hardness also affect the effectiveness of water purification. The iron in the water should not exceed 0.1mg/l while the hardness of the water should be less than 110 CaCo3mg/l.

APPLICATION:

- Filtration of utility water
- Filtration of water in fish keeping
- Filtration of water in garden ponds
- Filtration of water in swimming pools

DETAILS:

- Protective tube made entirely of quartz for low suppression of radiation.
- Simple operation and quick radiator replacement
- Lamp life time: over 8000h
- Transformer with grounding cable (230 V), O-rings and adapters included
- AISI 304 stainless steel body
- Working pressure up to 10 bar
- Inlet/outlet type - outer thread.

CABLE CONNECTION

When purchasing deep well and submersible pumps, our customers can choose to extend the electric cable by any length using a sealed cable connection. Depending on:

- pump motor power
- number of wires
- cable length to be connected,

our consultants will find the power cable with proper cross-section.

Each connection is manufactured in three stages:

1. Each wire is soldered separately to ensure proper current flow.
2. After soldering, each wire is sealed with a heat-shrink tubing filled with glue. Then, the tubing is heat-sealed.
3. During the last stage, outer heat-shrink insulation is applied with more glue, which when heated fills the entire cable connection.

This procedure of connecting the cable guarantees long-term tightness and faultless operation.
All connectors made by Dambat are covered by our warranty conditions.

INOX STEEL WIRE ROPE, POLYPROPYLENE ROPE

INOX ROPE: 7x7 stainless steel strand cores. The ropes can be used to suspend deep well pumps in wells and boreholes. The rope is made of AISI 304 stainless steel what makes is fully resistant to weather conditions. The ropes are supplied with stainless steel brackets and aluminium clamps.

PP ROPE: braided ropes made of polypropylene are flexible and lightweight alternatives to steel ropes. PP ropes are rotproof, resistant to oil, water, petrol and most chemicals. Polypropylene ropes are the only ropes that are not submersible. Ropes are available in sizes: 6mm, 8mm, 10mm.

PARAMETERS

Name	Diameter (mm)	Cross-section	Max. Load (m)	Tensile strength (N/mm2)	Weight (kg)	Breaking load (kN)
3mm INOX Rope	3	7x7	520	1770	0,037	5,07
6mm PP Rope	6	oplot	500	21%	0,017	5,0

10mm PP Rope	10	oplot	1200	21%	0,045	12,0

WELL TOP PLATES

Covers used for tight closing of deep well casing pipes through which the discharge pipes go in. Tight closing is provided by the gasket forced against the casing pipe. Tightly sealed well is protected against contamination and penetration of surface water. The well top plates are available in three versions made of plastic, steel and galvanized cast iron. All well top plates are equipped with a metal hook to support the pump, and a cable gland for tight routing of the power cable. Different sizes of connection threads allow the connection of pipes of different diameters. Depending on the design, well top covers are suitable for 110mm to 160mm casing pipes, i.e. for 4" and 6" wells.

Well top cover includes:

- Hydraulic connection (gasket) for connecting the discharge pipe
- Cable gland for connecting and routin
  the power cable through the well top cover
- Metal hook for attaching the pump support rope.
- Male thread or access hole tightened with a gasket.
- Seal for tightening the discharge pipe and the casing pipe.

Well seal type			
SIZE	*Male thread (galvanized)*	*Access hole (galvanized)*	*Access hole (plastic)*
110/25 mm	x		
110/32 mm	x	x	
110/40 mm		x	
125/25 mm	x		
125/32 mm	x	x	
125/40 mm	x		
160/40 mm	x	x	x
160/50 mm	x	x	x
160/60 mm		x	

WELL COUPLING

The well coupling is an innovative solution for easy installation/removal of deep well pumps in wells.

The brass coupling allows the pump to be hung directly in the well hole without the need for discharge pipe to be extended above the surface. Thus, it protects the well against contamination or penetration of surface water. Also, there is no need to use a concrete well casing where a discharge
pipe and a casing pipe with a well top plate are mounted.

The water drainage pipe is located below frost point and has a direct connection to the housing via a brass adapter. The coupling thus makes installation of deep well pumps very easy. All components are buried.

COUPLING FEATURES

- no need to use a concrete well casing and a well seal.
- protection of the well against contamination
- easy access to the well
- very easy pump removal
- suitable for 2.5"/ 3" / 3.5"/ 4" pumps
- pipeline installed below the frost line
- available in 1"and 1 1/4" sizes

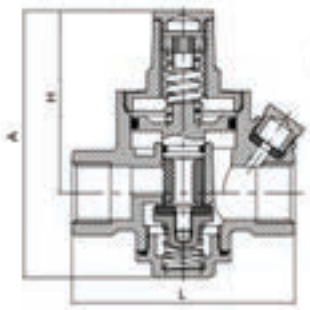
CENTRALIZER / TORQUE ARRESTOR

APPLICATION:
The centralizer is used to stabilize the pump inside the well pipe and to prevent the pump movement during the motor starting torque.

Design:
The centralizer is made of durable rubber, the shape of which can be adjusted depending on the size of the well. The centralizer is cut longitudinally and has two clamps on each end for mounting it on the discharge pipe. By bringing the centralizer clamps closer to each other, its diameter will increase and it will adapt to the diameter of the well.

Installation:
The centralizer should be mounted on the discharge pipe. To install it, tighten the clamps so it does not move along the discharge system.
It is important to tightened the top clamp more than the bottom clamp so that the pump can be easily removed if necessary. The bottom centralizer clamp should be 10-20 cm above the pump. The centralizer should be adjusted to the diameter of the well, but not too tight to allow easier lowering of the pump into the well.

Properties:
The centralizer is designed for systems with 1"to 11/4" discharge pipes and 4" to 8" casing pipes. The clamps included are made of stainless steel.



PRESSURE REGULATORS

Brass regulators designed to regulate input pressure in water and air systems. They also protect the systems against pressure spikes. Compact size and low-noise operation. Pressure regulators are available in sets with pressure gauges.

SIZE	Inlet/outlet (inch)	Weight (g)	Max. input pressure (bar)	Input pressure (bar)	Temperature (°C)	Insert	Filtr	L	H	A
DN15	½	510	16	1 - 6	0 - 85	Brass	ASI309 stainless steel	79,5	63	92

2	1000	(-15) - 120	16	

FIVE-WAY DELIVERY OUTLET

Brass outlet for mounting pressure fittings.
Connection thread diameter: 1"- pump connection, 1" delivery system connection, 1"- anti-vibration hose connection to the tank, ¼" - pressure gauge connection, ¼"- pressure switch connection. Available outlets are 70 mm and 90 mm high.

Connection / height	70 mm	80 mm	90 mm	120 mm
Pump connection	1"	1 1/4"	1"	1"
Delivery system connection	1"	1 1/4"	1"	1"
Anti-vibration hose connection	1"	1 1/4"	1"	1"
Pressure gauge connection	1/4"	1/4"	1/4"	1/4"
Pressure switch connection	1/4"	1/4"	1/4"	1/4"

PRESSURE GAUGE

The pressure gauge is used to measure the pressure in the system. Operating range is from 0 to 10 bar, ¼" inlet/outlet with male thread.

STOP VALVE FOR PRESSURE VESSELS

The valve is intended for mounting pressure vessels in central heating and hot water systems. Pressure vessels can be quickly mounted or dismounted for maintenance or replacement. The valve prevents the liquid outflow from the system during vessel removal.
Max. pressure: 10 bar Max. temperature 100oC

FAST CLAW COUPLING

Couplings for installation with suction hoses. They are resistant to negative pressure created between the pump and the hose. Available sizes:

- 3/4"
- 1"
- 1 1/4"
- 1 1/2"

Couplings are made of brass and come with rubber seal.

WELL FILTERS

Drill pipe filters for dredging ring wells or used as an alternative, designed to protect pumps against damage caused by sand. The filters can be used with various types of pumps, from hand pumps to surface pumps and booster sets, both single-stage and multi-stage. The screen is not suitable for ramming; it should be anchored freely in the ground.

The filter consists of 3 components:

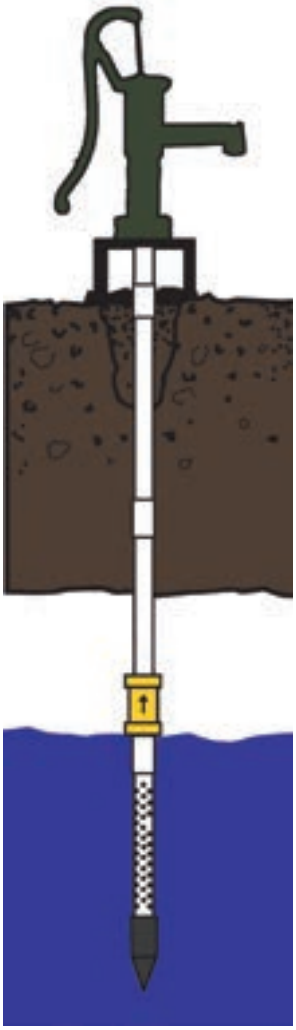
- A cast-iron mandrel with a point on one side
- Drill pipe made of galvanized steel
- Threaded end for water system connection

PARAMETERS

- Overall length: 130cm
- Point length: 20cm
- Filter diameter: 50 mm
- Connection diameter: 1¼"

APPLICATION

- Ring well dredging
- Ring well filtration
- An alternative for ring wells



ELECTRICAL CABLES

Nominal voltage	450/750V
Conductor material	copper
Number of conductors	3 / 4
Identification of conductors	Colour
Type of cores	Multi-strand (flexible)
Conductor insulation	Rubber (EPR)
Conductor class	Class 5 = flexible
Sheathing material	Rubber (EPR)
Permissible cable temperature	(-25) - (+60)
Sheathing colour	Black
Shape	Round
Sheating	chloroprene rubber, oil resistant, flame retardant

H07RN-F rubber heavy duty power and control cable 450/750 V, for in industrial and agricultural applications.
Class 5, from -25°C to 60°C, oil resistant, flame retardant

Compliance: PN-EN 60228 / PN-EN 60332-1

FEATURES
- Resistant to low temperatures
- Resistant to mechanical damage
- Oil resistant
- UV radiation resistant

APPLICATION:
- Hand and power operated equipment
- Medium mechanical loads
- Industrial and agricultural applications
- In dry, wet and humid environments

Depending on the batch, the dimensions may differ from the data specified below.

GARDEN HOSES IBO GARDEN

Garden hoses made of durable materials, with high resistance to mechanical damage and UV radiation. The hoses are resistant to various weather conditions. Due to their resistance over a wide temperature range, hoses can be used both in the summer and mild winter. An additional advantage of the hoses is their flexibility that prevents the hose from cracking and makes its operation much easier.

SPECIFICATION

- PVC materials
- Can be used all year round, operating temperature range −10/+50°C
- Three-layer green hose
- Cross-woven polyester braid
- Resistant to UV radiation
- Risk of settling of algae inside the hose has been eliminated
- Flexible structure
- Burst pressure: 20 bar

Hoses are made of high-quality PVC. It is strong and exceptionally durable, also in terms of resistance to high temperatures.

- Layer I - inner, protective layer made of black PVC, resistant to UV, prevents settling of algae inside the hose
- Layer II - cross-woven polyester braid
- Layer III - reinforced, transparent-green outer layer made of soft PVC

APPLICATION:

- for watering
- for pumping water
- for sprinkling

PARAMETERS

Diameter	Length		
½"	20 m	20 m	
¾"	30 m	30 m	30 m
1"	50 m	50 m	50 m

FLEXIBLE GARDEN HOSE

Flexible garden hose expands up to three times of its length under water pressure. Comes with a gun featuring 7 modes of operation and a trigger lock for continuous operation without holding the gun in your hand. The hose does not kink when expanding.
We offer three hose lengths:

- initial length 10m – expandable to 30m
- initial length 15m – expandable to 45m
- initial length 20m – expandable to 60m

ANTI-VIBRATION HOSES/CONNECTORS

IMAGE: Anti-vibration hose

IMAGE: Anti-vibration connection

Anti-vibration hoses with elbow:
Flexible anti-vibration hoses made of EPDM rubber approved for contact with drinking water, in a metal braid protecting the discharge pipe. Hoses have brass connections - an elbow with a rotary union and gasket on one end, and a nipple on the other end. The 30 cm hose has an external diameter of 19 mm and a female x male thread (1"x 1/2"). The 54 cm hose has an external diameter of 26 mm and a female x male thread (1"x 1"). The 60 cm, 70 cm and 80 cm hoses have an external diameter of 32 mm and a female x male thread (1"x 1").

APPLICATION:
Water distribution in heating and air-conditioning systems, domestic water systems. Flexible connections of pumps and pressure tanks, and all connections for distributing water of up to 90°C.

Anti-vibration connectors (straight)
Flexible anti-vibration connectors made of EPDM rubber approved for contact with drinking water,
in a metal braid protecting the discharge pipe. Connectors with brass connections - an union with a gasket on one end, and a nipple on the other end.
The offer includes 30, 40, 50, 60, 80, 100 cm connectors with female x male (1" x 1") threads.

APPLICATION:
Water distribution in heating and air-conditioning systems, domestic water systems. Flexible connections for distributing water of up to 90°C.

PARAMETERS

Elbow hoses	Diameter	Straight connectors	Diameter
30 cm	18 mm	30 cm	32mm
54 cm	27 mm	40 cm	
60 cm	32 mm	50 cm	
70 cm		60 cm	
80 cm		70 cm	
100 cm		80 cm	

SUCTION HOSES

4 and 7m plastic suction hoses for supplying water from various surface intakes using suction pumps.

The hose has a suction strainer on one end to prevent larger dirt, such as leaves from entering the system. On the other end, the hose has a 1" union joint to connect the hose to the pump inlet.

APPLICATION:
Water intake from dug and deep wells, lakes, rivers and reservoirs.

SUCTION HOSES – REINFORCED

Transparent light weight steel-wire-reinforced small-bend-radius hose. Reinforced hoses are used as suction and discharge hoses. They are resistant to negative pressure and can be used in adverse weather conditions.

APPLICATION:
Suitable for sucking and transporting water, oil and powder in manufacturing plants. Reinforced hoses are used in agriculture, civil engineering, irrigation, and industrial applications in systems supplying water and oil to installations and equipment. It can be used instead of rubber hoses and metal pipes.

Material: Helix PVC: steel wire
OPERATING TEMPERATURE: from -5 °C to +65 ° C

FEATURES:
- Very smooth inner wall and outer surface
- Reinforced with steel wire spiral
- Good resistance to crushing, abrasion and most chemicals
- Excellent resistance to pressure and negative pressure
- Non-toxic and odourless

PARAMETERS

Reinforced suction hose					
Diameter	*Inner (mm)*	*Outer (mm)*	*Length (m/roll)*	*Operating pressure (bar)*	*Test pressure (bar)*
3/4"	19	23	50	5	13
1"	25	30	50	5	13
1-1/4"	32	38	50	4	12
2"	50	58	50	4	12
3"	76	90	30	4	12

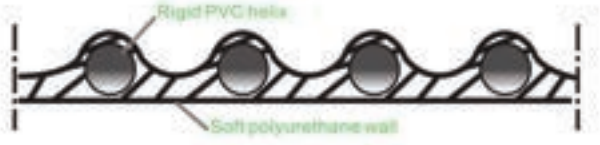
SUCTION HOSES - HELIX

Lightweight, flexible hose for delivery and suction with increased resistance to UV radiations.
Their important feature is resistance to negative pressure.
Helix hoses have lower weight compared to reinforced hoses.

APPLICATION:
In industrial applications, agriculture, for irrigation and civil engineering. It can be used instead of rubber hoses and metal pipes. It is suitable for transporting pellets, powder, grain, water in irrigation systems, as well as water and oil in industrial systems.

Material: Helix PVC: PVC wire
OPERATING TEMPERATURE: from -5 °C to +65 °C

FEATURES:
- Very smooth inner wall and outer surface
- Reinforced with steel wire spiral
- Good resistance to crushing, abrasion and most chemicals
- Excellent resistance to pressure and negative pressure
- Non-toxic and odourless



PARAMETERS

UV resistant helix suction hose						
Diameter	*Inner (mm)*	*Outer (mm)*	*Length (m/roll)*	*Operatin pressure (bar)*	*Test pressure (bar)*	*Negative operating pressure (bar)*

1-1/4"	32	34,5	30	6	18	1,5
1-1/2"	38	41	30	5	16	1,5

DISCHARGE HOSES

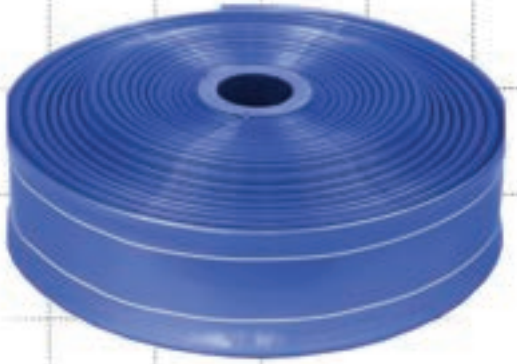

IMAGE: ECO Hose

IMAGE: Waven hose

IMAGE: PVC Hose

IMAGE: Woven hose with fast connection

Flexible discharge hoses for pumping water and sewage. Available versions:

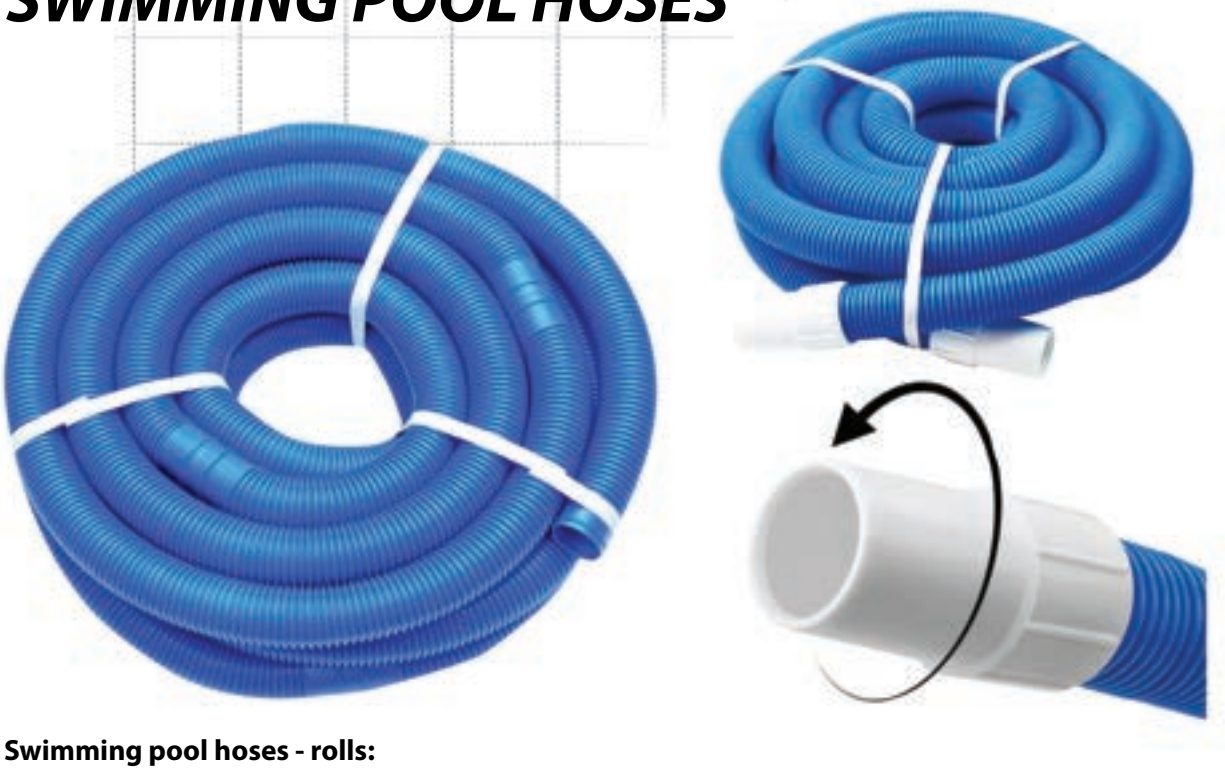
- Eco flexible hose - blue discharge hose with a maximum permissible pressure of 2 bar, in 50m sections, available sizes: 1" / 2"
- PCV hose - blue discharge hose with a maximum permissible pressure of 2 bar, in 50m sections.
- Available sizes: 04/09/20172/2.5/3
- With the weave braid (fire hose) and the weave braid with fast connections - a white hose with a maximum permissible pressure of 8 bar. Available sizes: 1.5" / 2"

APPLICATION:
Drainage of excavations and flooded rooms, pumping sewage, water from lakes, ponds, rivers with submersible pumps.

PARAMETERS

Model	1"	1 1/4"	1 1/2"	2"	3"	Max. pressure
Eco rubber hose	50m	x	x	50m	x	2 bar
Blue rubber hose	50m	50m	50m	50m	50m	2 bar
Woven hose	30m	x	30m	20m / 30m	x	8 bar
Woven hose with fast connections	x	x	x	20m / 30m	x	8 bar
Woven hose with MAX fast connections	x	x	x	20m / 30m	x	8 bar

SWIMMING POOL HOSES



Swimming pool hoses - rolls:

Swimming pool hoses designed for connecting various pumping, filtering, vacuum and cleaning accessories and fittings. The hoses are made of high density polyethylene (HDPE), which provides flexibility, low weight and high durability. Material used ensure resistance to UV radiation, chlorine and adverse weather conditions.
Hoses are available in 50m rolls with 32mm and 38mm diameter, and any length being a multiple of 1m can be cut off.

Swimming pool hoses - sections:

Swimming pool hoses designed for connecting various pumping, filtering, vacuum and cleaning accessories and fittings. Hoses are available in 50m sections with 32mm and 38mm diameter with swivel connectors.
Operating temperature range: from -15 ° C to + 60 ° C Features:

- Very flexible and floating
- Smooth inner surface
- Crush resistant structure
- High tightness
- Small bend radius
- Tear resistance
- High tensile strength
- Available in rolls or 11m sections with adapters.

PARAMETERS

Model	Diameter	Length	Adaptery	Can be cut to length	Operating negative pressure	Test pressure
32 mm hose (roll)	1 1/4"	50m	No	Yes	0,8bar	4bar
38mm hose (roll)	1 1/2"	50m	No	Yes	0,8bar	4bar
11m/32 mm hose	1 1/4"	11m	Yes	No	0,8bar	4bar
11m/38mm hose	1 1/2"	11m	Yes	No	0,8bar	4bar

Pressure loss / discharge resistance when using galvanized steel pipeline.
Pressure losses along the 100 m horizontal section
Pressure loss when using a different pipeline (ratio) Cast iron pipeline x 1.4
Stainless steel pipeline x 0.8
Aluminium pipeline x 0.7
PE / PVC pipeline x 0.65

Pressure systems

IBO products are a reference for quality and reliability in the pump sector in Poland.

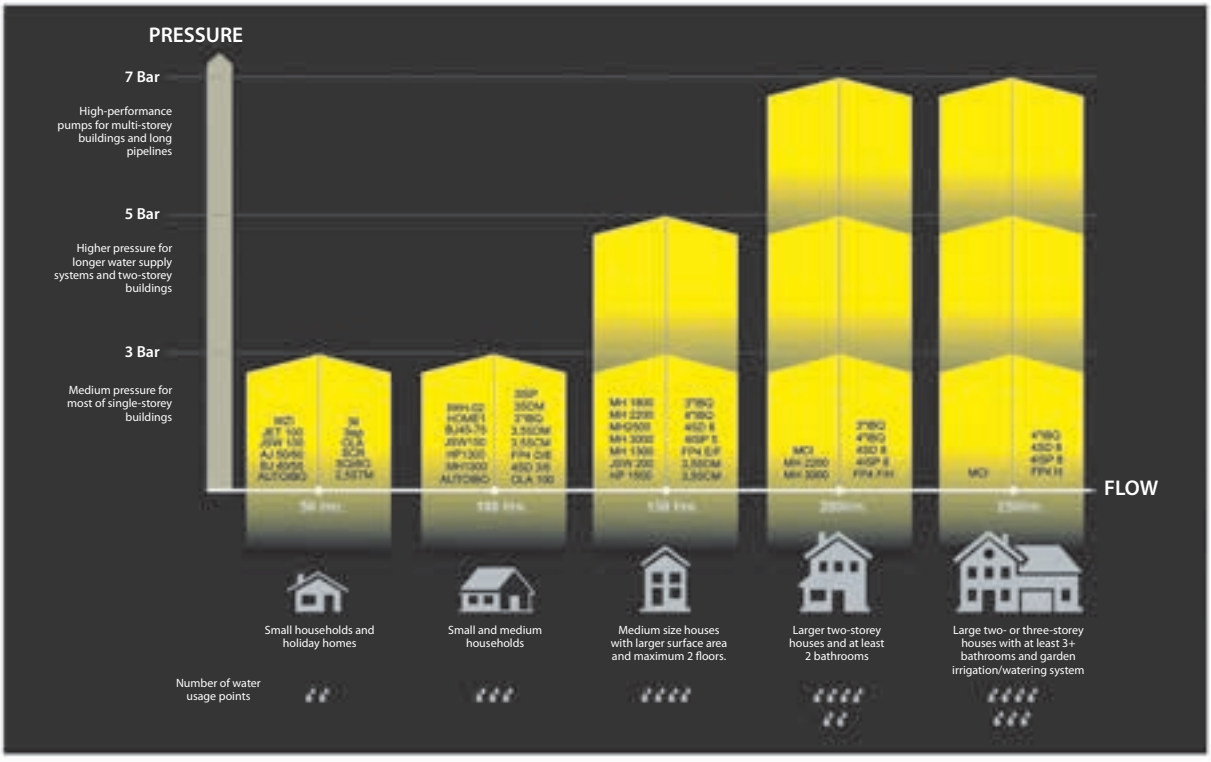
Dambat offers a wide range of pressure systems, therefore we are able to deliver products that are perfectly adapted to customer requirements. IBO products can be adapted to virtually every household application and budget.

The selection of a product that is the most suitable for a given application depends on many factors, including:

- **What is the water demand (flow in l/min. or m^3/h)?**
  The demand will largely depend on the number of taps or pressure points that can be used simultaneously.
- **What is the pressure demand?**
  Due to losses during pumping through both vertical and horizontal sections of the pipeline, as well as during supplying water at a certain pressure to higher floors or in larger systems, the demand for pressure generated by the pump will be greater than in case of single-family houses and small systems.

A simple diagram to assist in the selection of suitable pumps is presented below. It takes into account flow and pressure demand depending on the size of the building and the number of water usage points.

Diagram for selecting device parameters



Sewage pumps

Dambat offers a wide range of submersible pumps for individual, commercial, agricultural and industrial applications. IBO pumps are reliable devices monitored at every stage of manufacturing process, made of robust materials, which results in increased durability compared to competing products.

in order to make the installation of devices and their operation easy and faultless, Dambat offers a wide range of devices with various parameters and features suitable for different systems. Selected single-phase pumps are available with and without a float switch. Some sewage pumps can be installed with a guide rail system.

APLICATION

Type of impurities:	Pump type	Pumps for clean water	Pumps for slightly contaminated water (swimming pool, rainwater, drainage of flooded rooms)	Pumps for dirty water contaminated with solids of up to 30 mm diameter. (swimming pool, rainwater, drainage of flooded rooms)	Pumps for dirty water contaminated with solids with diameter from 30 mm to 50 mm (slurry, liquid waste, sewage)	Pumps with cutting system for domestic raw sewage (liquid waste, sewage)	Pumps for agricultural and industrial for raw sewage (slurry, liquid waste, sewage)	Pumps for dewatering and drainage (drainage ditches, construction sites, mines, tanks containing sand or sludge)	Pump for slurry contaminated with solids (raw sewage, tanks with sediments)

Useful information

If you need assistance in selecting a pump, please check the data below and contact us.

Most of our distributors are professional companies operating in the pumping sector and having proper knowledge in scope of the selection of pumping devices and equipment. However, if you have difficulties is selecting the right device, please answer the following questions and contact us, our technical advisers will try to find a product that suits your requirements.

Please answer the following questions

1. What will the pump be used for?

- ☐ • Increasing system pressure
- ☐ • Garden watering/sprinklers
- ☐ • Irrigation
- ☐ • Heating systems
- ☐ • Sewer system/liquid waste
- ☐ • Dewatering/drainage
- ☐ • Water transfer
- ☐ • Firewater systems
- • Other (please specify)

.....

2. Required operating pressure at specified flow ..... Bar

3. Required flow at specified pressure ..... l/min or

4. What is the planned or existing water intake?

- ☐ • Deep well
- ☐ • Ring well
- ☐ • Suction pit
- ☐ • Instalacje
- ☐ • Rainwater tank (foldable)
- ☐ • River, stream, canal
- ☐ • Lake
- ☐ • Water supply system
- ☐ • Excavations
- • Other (please specify)

.....

5. Water type

- ☐ • Clean water
- ☐ • Dirty water
- ☐ • Water with sand
- ☐ • Sewage/liquid waste
- • Other (please specify)

.....

6. Deep well

Internal diameter of the well pipe ..... (mm)

At what depth is the water surface? ..... (m)

Well output (we recommend to carry out survey) ..... (l/min)

Horizontal distance of the well to the pressure tank ..... (m)

Level difference between the well opening and the destination point ..... (m)

7. Ring well

At what depth is the water surface? ..... (m)

Well output (we recommend to carry out survey) ..... (l/min)

Horizontal distance of the well to the pressure tank ..... (m)

Level difference between the well opening and the destination point ..... (m)

7. Lake

- • Horizontal distance from the well to the pressure tank ..... (m)
- • Level difference between the well opening and the destination point ..... (m)

8. What is the pipeline made of?

- ☐ • Galvanized
- ☐ • PCV / PE
- ☐ • Stainless steel/copper
- ☐ • Discharge hose
- • Other (please specify)

.....

9. Discharge pipe diameter ..... (mm)

10. Required power source?

- ☐ • Electric motor (230V)
- ☐ • Electric motor (40OV)
- ☐ • Electric motor (12V)
- ☐ • Internal combustion engine
- ☐ • Piston (hand) pump
- ☐ • PTO shaft
- • Other (please specify)

.....

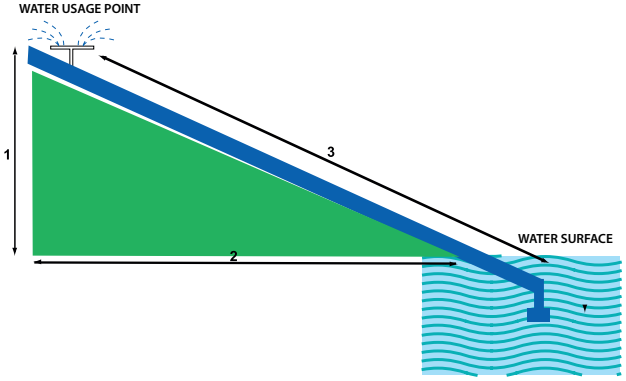
11. Is a pressure tank required? If yes, please specify what type.

- ☐ • 24
- ☐ • 50
- ☐ • 100
- ☐ • 150
- ☐ • 200
- ☐ • 300
- ☐ • 500
- ☐ • 1000

12. Is control required? If yes, please specify what type.

- ☐ • Frequency converter
- ☐ • Pressure switch
- ☐ • Automatic flow switch
- ☐ • Protection
- • Other (please specify)

.....



Sample water demand depending on application is shown below.
It should be taken into consideration that the demand may differ depending on the economic and geographical development, therefore the data presented below should be used for informative purposes to assist in the selection of the device. In order to pump water from intakes with surface pumps, negative pressure (so-called suction) is required.

In order to assist in the selection of the device, the factors that affect the suction height are presented below:

- Altitude: atmospheric pressure decreases with increasing altitude.
- Flow: the higher the flow rate through the pump, the lower the negative pressure created by the pump.
- Water temperature: the higher the water temperature, the lower the suction capacity.
- Losses: not only the vertical section on which the water surface is located but also the horizontal section should be taken into account.

The height above sea level at which the pump operates is also very important.

HOUSEHOLD	HOUSEHOLD
Shower: 8-10 l/m. at 1.4 bar	Cattle: 30-55 litres / day
Small lawn sprinkler: 15-20 l/m. at 1.4 bar	Dairy cows: 30-55 litres / day
1/2″ tap: 12-18 l/m. at 1.4 bar	Sheep: 30-55 litres / day
3/4" hose + 1/4″ nozzle: 40-50 l/m. at 2.1 bar	Pigs: 30-55 litres / day
1" hose + 3/8″ nozzle: 70-90 l/m. at 2.1 bar	Pigs: 30-55 litres / day Horses: 30-55 litres / day

WATER TEMPERATURE (° C)	HEAD LOSSES (m)
15	0
20	0,06
30	0,22
40	0,52
50	0,98
60	1,73
70	2,85
80	4,51

LENGHT		
inch	ft	cm
1,00	0,08	2,54
12,00	1,00	30,48
36,00	3,00	91,44
39,37	3,28	100,00

FLOW		
l/min	l/sec	m^3/h
10	0,17	0,60
16,7	0,28	1
60	1	3,60

VOLUME UNITS		
litre	m^3	gallon
1	0,001	0,22
1000	1	220
4,546	0,0045	1

PRESSURE			
m	kPa	bar	psi
1	9,81	0,10	1,42
10	98,1	0,98	14,2
10,2	100	1	14,5
70,4	690,8	6,9	100
101,9	999,6	10	144,7

LEVEL	*SUCTION CAPACITY*	*VOLUME*	
Sea level	6,7 m	litre	m^3
500m	6,1 m	1	0
700m	5,8 m	1000	1
1000m	5,5 m	40,546	0,0045
1500m	5,0 m	30,785	0,0038
2000m	4,5 m	280,32	0,0283

To place your purchase order,
please call or e-mail our sales department.
Contact details can be found
on the next page (cover).

Product parameters shown in this document result from laboratory testing.
Operating parameters may vary by +/-10%.
The weight and dimensions of the products may vary depending on the production batch.

The manufacturer reserves the right to make changes to the devices offered in the catalogue without prior notice.
Changes may include: parameters, dimensions, appearance or names.

This catalogue does not constitute an offer pursuant to trade law.
For full offer and price list, please contact our Sales Department.
